This Chapter deals with manufacturing industries in Canada in three Parts. Part I is a textual review of manufacturing in 1951 compared with the previous year. Part II gives general analyses including: the historical development of manufacturing; detailed treatment of current production under various groupings and individual industries; and principal factors in manufacturing production such as capital, employment, salaries and wages and size of establishment. Part III deals with the provincial and local distribution of manufacturing production.

PART I.—REVIEW OF CANADIAN MANUFACTURING

Canada is no longer on the fringes of industrialization but ranks among the world's most important manufacturing countries. Basic historical developments, such as the opening of the West and the magnitude of requirements of all kinds for World Wars I and II, have been followed by recent discoveries of far-reaching significance. Such events as the discovery of a major oil pool on the prairies in 1947, the discovery of large-scale deposits of iron ore and the successful search for uranium have given new dimensions to Canadian thinking and business planning. These are the factors that explain the records of capital expenditures year by year since the end of the War. Yet it is not the mere rate of expansion that is significant. There have been other periods when Canada's population has grown more rapidly and in many respects the rate of industrial expansion in the late 1920's was relatively as great as in the post-war years. The real significance of the latter period is that never before has there been an advance on such a broad industrial front.

The second point to be observed is the changing emphasis of Canadian manufacturing activity. By 1949 the period of post-war conversion was passed and Canada had entered a new phase of economic expansion which derived its dynamic from the discovery of new resources and the application of new processes. This meant that even the sharp recession in the United States in 1949 failed to have significant effects in Canada. The Korean conflict and the consequent rearmament program gave an added impetus to the expansion of Canadian industry and to the development of Canadian basic resources. Capital expenditures that contributed most to the defence of Canada were given priority. Additional capacity was created to meet the requirements of the specialized defence program—aircraft, electronic equipment, ships and guns—many items of which had never before been produced in Canada. Measures such as steel control, credit regulations and deferred depreciation had the desired effect. A shift gradually took place toward the further expansion of basic industrial capacity and away from investment in consumer goods and services.

It should be emphasized that Canada's development as an industrial country is based upon and not independent of her position as a trading nation. In 1952, Canada was sixth among the world's industrial powers and the world's third largest trader. Canada's exports earned a quarter of her income and Canada's per capita trade at \$571 was higher than that of any other country. At the same time, Canada's position has become more closely linked with the North American Continent and trade with the United States has grown to the point where that country took nearly two-thirds of Canada's exports in 1952.

The stability of current levels of manufacturing is indicated by the fact that such activity is the result of business assessments of resources and market potentialities. Millions of dollars are being invested in oil because the prairies can produce oil as economically as other great fields on the North American Continent. Petrochemical plants are being erected because the raw materials are readily at hand. Kitimat is based on the coincidence of abundant and cheap hydro-power and access to ocean transportation, both of which are essential to the low-cost production of aluminum. Exploitation of the Ungava iron ore deposits rests on the belief that the steel industry of the North American Continent will need the high-grade ores involved in order to meet continuing peace-time demands. No country is in a more favourable position than Canada to supply uranium for the production of atomic energy.

The manufacturing industries of Canada in 1951 again established a new record in gross value of production with a total of \$16,392,187,132. This represents an increase of 18.6 p.c. over the previous year's value. Part of the increased value was accounted for by an increase of about 6.0 p.c. in the physical volume of production and the balance by increased prices of fully and partly manufactured products. Accompanying the rise in output was an increase of 6.3 p.c. in the number of persons employed, with an increase of 18.2 p.c. in the salaries and wages paid. Salary and wage payments at \$3,276,280,917 were the highest on record and exceeded the previous high, reported in 1950, by \$505,013,482.

Not all segments of manufacturing production were affected to the same degree by the impact of the war in Korea. The greatest expansion was reported by the industries classified in the durable goods group which, according to preliminary estimates, achieved an increase of 10.4 p.c. in the physical volume of

production, as compared with an increase of only 2.7 p.c. for the industries producing non-durable goods. For manufacturing as a whole the increase was 6.1 p.c., the index at 242.1 being only 0.2 points below the record wartime level attained in 1944.

As was to be expected, the industries producing for national defence made the greatest gains in production during 1951. Accordingly, most of the industry groups producing durable goods reported increased activity, while only a few of the industry groups producing consumer goods reported increases in production. The transportation equipment group, with an increase of 20 p.c. in physical volume, experienced the greatest expansion in production. This was followed by products of petroleum and coal with 13 p.c., iron and steel products 11 p.c., non-ferrous metal products 10 p.c., non-metallic mineral products 9 p.c., paper products 8 p.c., electrical apparatus and supplies 7 p.c., chemicals and allied products 6 p.c., rubber products 5 p.c., foods and beverages 4 p.c., wood products 3 p.c., and miscellaneous industries 0.5 p.c. In the non-durable goods sector, the greatest decline in physical volume of production was reported by the leather products group with 8 p.c., followed by tobacco and tobacco products with 6 p.c., clothing 4 p.c., textiles 2 p.c. and printing, publishing and allied industries 0.3 p.c.

Manufacturing establishments reporting in 1951 numbered 37,021. These plants furnished employment to 1,258,375 persons who received \$3,276,280,917 in salaries and wages. They also produced goods with a selling value at the factory of \$16,392,187,132 and spent \$9,074,526,353 for materials, while the value added by manufacture totalled \$6,940,946,783. It should be remembered that the value added by manufacture does not represent the manufacturers' profits. The value added is obtained by subtracting the cost of materials, including fuel and electricity, from the value of products. The difference represents the value added to the materials by labour. It is this difference which the employer of labour uses to pay for the labour itself, overhead expenses and interest and profits. Compared with the previous year, there was an increase of \$998,888,554 in the value added by manufacture.

Fifteen leading industries accounted for nearly 50 p.c. of total value of production of all industries in 1951. The largest industry—pulp and paper—which has been steadily expanding since the end of the War, is embarking on a further stage of development. From 1946 to 1951, the physical volume of production of the industry increased by one-third and new projects were under way or in an advanced state of planning. For example, in British Columbia a \$40,000,000 mill was nearing completion and projects involving around \$75,000,000 were under construction. Other multi-million-dollar plants were scheduled for Alberta, and significant additions to capacity were planned by a number of Ontario and Quebec companies. In 1951, a 5-p.c. increase was secured in newsprint production by speeding up machines and by more efficient plant operation. New mills contributed to a 20-p.c. increase in market pulp production and a 14-p.c. increase in the output of paperboard and papers other than newsprint. The gross value of production of this industry rose from \$954,000,000 in 1950 to \$1,238,000,000 in 1951. The industry ranks first in wages paid, first in new investment, first in exports as well as first in value of output. It produced one-quarter of the world's output of wood-pulp. Most of the production was processed domestically to provide 54 p.c. of the world's supply of newsprint.

Five industries in the foods and beverages group ranked among the 15 largest in Canada. Because of the basic importance of agriculture to the Canadian economy these industries are in the forefront of industrial activity. The raw products of the

farm must be further processed in meat-packing plants, in canning factories, in milk, cheese and butter establishments or in flour mills. The value of production of the slaughtering and meat-packing industry, which ranks second, rose from \$757,000,000 in 1950 to \$892,000,000 in 1951; butter and cheese production was valued at \$331,000,000 in 1950 and \$374,000,000 in 1951; flour milling reported a rise in gross value of production from \$247,000,000 in 1950 to \$281,000,000 in 1951; over the same period miscellaneous food preparations advanced from \$180,000,000 in 1950 to \$260,000,000 in 1951; the bread and other bakery products industry showed a gain from \$215,000,000 in 1950 to \$245,000,000 in 1951. In the post-war years, despite the virtual completion of war relief and emergency feeding programs, the food industries have continued to forge ahead. In 1951 farm income was the highest on record and agriculture's contribution to the gross national product of Canada was 30 p.c. higher than in 1950.

The third leading industry—non-ferrous smelting and refining—had a gross value of production of \$670,000,000 in 1950 which rose to \$861,000,000 in 1951. Canada has been the world's leading exporter of non-ferrous metals for over a decade and is also one of the world's leading producers of non-ferrous metals, standing first in the production of nickel, second in aluminum and zinc and fourth in copper and lead. The most important base-metal ore-bodies, at Sudbury, Ont., and Kimberley, B.C., were discovered before the turn of the century. They contain ores of two or more base metals intimately associated and frequently containing appreciable quantities of precious metals such as gold, silver and platinum. Present-day extraction methods are a triumph of modern techniques. Important new discoveries of non-ferrous metals include copper in the Gaspé Peninsula, copper-zinc ores at Chibougamau and zinc in Barraute Township in northwestern Quebec, titanium at Allard Lake on the Gulf of St. Lawrence and nickel-copper at Lynn Lake in northern Manitoba.

The manufacture of motor-vehicles was Canada's fourth largest industry in 1951 and the motor-vehicle parts industry ranked thirteenth. Gross value of production of motor-vehicles rose from \$676,000,000 in 1950 to \$743,000,000 in 1951 when the productive capacity of the industry was nearly three times the pre-war capacity. In 1951 a record number of over 415,000 vehicles of all types were produced; in the same year retail sales of passenger cars amounted to \$683,000,000 and sales of commercial vehicles to \$267,000,000, both record highs. The trend of passenger-car ownership reflects the rising standard of living and the growth of the motor-vehicle industry: in 1939 there were 9.5 persons for each passenger car in the country and in 1951 an estimated 6.7 persons per passenger car. The development of the motor-vehicle parts industry also moved upward, production rising from \$227,000,000 in 1950 to \$263,000,000 in 1951.

The fifth leading industry—petroleum products—grew from \$512,000,000 in 1950 to \$599,000,000 in 1951. In many respects petroleum has been Canada's most outstanding post-war development. Crude petroleum production almost quadrupled from 1947 to 1951 and refining capacity increased by 50 p.c.

For the Canadian lumber industry, 1951 was a year of near-record activity, the output of sawmills advancing from \$497,000,000 in 1950 to \$592,000,000. For most of the period since the end of the War, demand for sawmill products continued to exceed the available supply and, as a reflection, lumber prices more

than doubled. During these years the annual lumber output averaged 6,200,000,000 bd. ft., a 60-p.c. increase over the average rate for the four years immediately prior to World War II.

Gross value of production of the primary iron and steel industry advanced from \$341,000,000 in 1950 to \$465,000,000 in 1951. The industry is making tremendous progress because of the expansion of iron-ore production; between 1945 and 1951 production of the Steep Rock mines increased from 500,000 tons to more than 1,300,000 tons and an annual 3,000,000-ton output is expected by 1955. Potentially more important are the developments presently taking place in the Quebec-Labrador area. When production in this field gets under way in 1954, Canada should rank among the six largest producers of iron ore in the world.

Increased activity has been reported by the railway rolling-stock industry. This industry, which in 1950 ranked sixteenth with a gross value of production of \$194,000,000, moved up into tenth position in 1951 with an output of \$301,000,000.

In the textile group, only one industry ranked among the fifteen largest in 1951. Output of the cotton yarn and cloth industry advanced from \$257,000,000 in 1950 to \$274,000,000. Both the men's and women's factory clothing industries failed to rank among the leading fifteen industries in 1951. The textile industry was typical of other consumer goods industries which faced a market softening. Investment resources had been largely expended on the basic enlargement of industrial capacity and in the early post-war years production had been expanded to meet large backlogs of demand. The outbreak of hostilities in Korea provided another stimulus to sales but, as this precautionary buying subsided, idle capacity developed in some industries. The same condition in other industrialized countries resulted in an increase in competition in the Canadian market. The gross value of production of the textile industry rose by 85 p.c. between 1946 and 1950. New investment was high during those years and despite the considerable decline in production and sales from early 1951, planned investment in 1952 was up to the levels of the two previous years.

The gross value of production of the rubber goods industry advanced from \$239,000,000 in 1950 to \$312,000,000 in 1951. Canada ranks among the leading countries of the world as a manufacturer of rubber goods and the industry makes an important contribution to the country's export trade. It should be pointed out, however, that much of the increase in 1951 was accounted for by price advances. While many kinds of rubber footwear were produced at a rate exceeding that of 1950, there was a decline in the physical production of some important items such as passenger car tires. The industry is practically confined to Ontario and Quebec with Ontario accounting for almost 70 p.c. of production and employment.

PART II.—ANALYSES OF MANUFACTURING STATISTICS

Section 1.—Growth of Manufacturing

This Section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, employees, salaries and wages paid, cost of materials and value of products. Also, it includes information on the consumption of manufactured products as well as a treatment of value and volume data.

Subsection 1.—Historical Statistics of Manufacturing

It is impossible to give absolutely comparable statistics of manufacturing over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, as far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

1.—Summary Statistics of Manufactures, 1917-51

NOTE.—Statistics of manufacturing from 1870 have been published, but between that year and 1917 figures are not on a comparable basis to the series given below. Statistics for significant years will be found in the 1943-44 Year Book, p. 363. Statistics of the non-ferrous metal-smelting industries were included in manufactures in 1925 for the first time.

¹ For 1924 and subsequent years the net value of production is computed by subtracting the cost of fuel and electricity and the cost of materials from the gross value. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available.

² A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.

³ Includes Newfoundland.

¹ The method of computing the number of wage-earners in 1925-30, inclusive, increased the number somewhat over that which otherwise would have been given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner. In 1931, the method in force prior to 1925 was re-adopted.

² Net values of products; see footnote 1, Table 1, p. 620.

Consumption of Manufactured Products.—The value of all manufactured products made available for consumption in 1951 was \$16,677,805,705, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of exports. More accurate statistics could be presented were it possible to exclude the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, wood and paper, textiles and animal products were, in that order, the leading groups in the value of finished products made available for consumption in 1951. Animal, wood and paper, and non-ferrous metal products were also manufactured in greater quantities than required

for home consumption, providing export balances in these groups. Canada in the past imported large quantities of iron and steel, textiles, chemicals and non-metallic mineral products despite large home production but recent expansion of the iron and steel, chemical and non-ferrous metal industries will enable Canada to meet more requirements for home consumption and to export greater quantities in the future.

5.—Consumption of Manufactured Products, Significant Years, 1929-51, and by Industrial Group, 1950 and 1951

¹ Figures for the years 1929 and 1933 are for the fiscal years ended Mar. 31 of the following years; for 1939-50 they are for the calendar year. Net imports are total imports less foreign products re-exported.

² Consumption figures for the major standard industrial classification groups (see p. 630) cannot be calculated as statistics of imports and exports are still compiled on the component material classification basis.

Subsection 2.—Value and Volume of Manufacturing Production

Value of Manufacturing Production.—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind. In recent years, owing to violent changes in prices, unadjusted value series, used in isolation, have become increasingly inadequate as indicators of economic trends. Of necessity, interest has shifted to measures of volume. The index number of wholesale prices, on the 1926 base, stood at 114.3 in 1917, 155.9 in 1920, 97.3 in 1922, 95.6 in 1929, 67.1 in 1933, 84.6 in 1937, 75.4 in 1939 and

166.1 in 1950. Index numbers of the prices of fully or chiefly manufactured goods were: 113.5 in 1917, 156.5 in 1920, 100.4 in 1922, 93.0 in 1929, 70.2 in 1933, 80.5 in 1937, 75.3 in 1939 and 148.9 in 1950.

Volume of Manufacturing Production.—Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services and not whether they are expending more dollars and cents. The field of industrial production, because of its dominating position in the national economy, has attracted increasing attention. This, in turn, has resulted in the need for more accurate measurements of physical output.

During the past few years, the Dominion Bureau of Statistics has been engaged in the reconstruction of the index of industrial production* which was first published in 1926 and later subjected to several major revisions. The latest reconstruction was made possible by the availability of a great deal of basic data. Annual statistics valuable for this project have been collected by the Bureau from the end of World War I to the present and the scope of the monthly information has been greatly expanded. Applying methods developed through the experience of the past quarter-century, it has been possible to compute an index with a fair measure of accuracy from 1935 to the present. The manufacturing component, covered specifically in the following paragraphs and tables, supersedes, from 1935 on, the index of the volume of manufacturing production published in the 1951 Year Book, p. 585, for the years 1929-46. On comparing the index for 1935 under the old series, which stood at 87.9, with the new index at 86.5, it would appear that for the back years little significant variation existed between the two series.

The manufacturing sector is divided, at the major group level, into durable manufactures and non-durable manufactures, for the reason that the movement of durable goods normally varies from that of non-durables. There tends to be greater fluctuation in durables from prosperity to depression, the demand for non-durables being more constant.

6.—Index of the Total Volume of Manufacturing Production, classified on the Basis of Durable and Non-Durable Goods, 1935-50

(1935-39=100)

Year	Non-durable Manufactures	Durable Manufactures	All Manufactures	Year	Non-durable Manufactures	Durable Manufactures	All Manufactures
1935.....	89.0	82.7	86.5	1943.....	171.5	333.0	234.5

1939.....	108.2	107.9	108.1	1947.....	191.2	233.5	207.7
1940.....	124.6	149.7	134.4	1948.....	197.1	244.4	215.5
1941.....	148.7	218.5	175.9	1949.....	198.2	246.3	217.0
1942.....	169.4	283.1	215.7	1950.....	208.3	259.1	228.1

The period 1935-50 was characterized by unprecedented industrial expansion. Emerging from a depression practically world-wide in scope, industrial operations in Canada entered a period of rapid growth which was maintained throughout the war and post-war years without important interruption.

* A description of the methods used in constructing the index and a description of its scope is given in DBS Reference Paper No. 34, *Revised Index of Industrial Production, 1935-1951*.

A problem confronting business economists is to determine how much of the post-war industrial 'drive' was caused by normal growth factors and how much of it was caused by the backlog of war-accumulated demand. While it is true that the greatest demand accumulation took place in housing and consumer durables, non-durables such as textiles and clothing also started the post-war period with a sizeable backlog of unfilled demand. It is now becoming apparent, after the vigorous pace of business following the outbreak of hostilities in Korea, that a considerable portion of this demand has been satisfied and some industries, notably textiles, clothing and major appliances, are experiencing difficulties. However, general prospects appear bright. The increased productive activity which will result from the present very high level of capital investment is not as yet fully reflected in current production statistics. Huge expansion and development programs are well under way in iron ore, aluminum and other metals, oil, steel, chemicals, motor-vehicles, electric power, and in a number of other industries.

The volume of output of manufactures rose steeply after the outbreak of hostilities in 1939. Productive facilities responded quickly to the urgent requirements of the Armed Forces. In the early days of the War, production assignments allotted were comparatively simple but, as pre-war weapons became obsolete and as Canada proved capable of turning out larger and more complex equipment, the assignments constantly shifted, changed and grew more difficult. The production figures merely suggest the magnitude of the achievement. They cannot describe the tremendous effort needed to convert a semi-agricultural country into a wartime arsenal nor the complications that arose because of shortages of manpower, tools and materials.

The productive peak was reached in 1944, when weapons, supplies and equipment were rolling off the assembly lines at a record-breaking pace. The end of hostilities and the subsequent reconversion to peace-time production were attended with declines in output in 1945 and 1946. The upward trend was resumed, however, in 1947. The rate of advance slackened moderately in 1948 and 1949 but regained most of its 1947 impetus in 1950 when the renewal of hostilities in Korea resulted in heavy anticipatory buying on the part of consumers and in growing expenditures for national defence. A remarkable feature is that, in 1950, the index of the volume of manufacturing production was within 10 p.c. of the record wartime level of 242.3 established in 1944.

Non-durable Manufactures.—The trend of output in the non-durable sector of manufacturing was visibly smoother than in the durable sector. Except in two years, 1938 and 1945, there was no interruption in the upward movement of production during the period under review. Despite the fact that war contracts quickened the pace of output in some of the industries, production continued to expand after the War, although at a slower rate. Unlike durable goods, non-durable commodities are mostly consumer goods and are less influenced by sudden changes in the international situation or the capital investment programs of producers and governments. By 1950, the non-durables index of output had reached 208, the highest on record.

Durable Manufactures.—The tremendous increase in physical output during the war years was mostly concentrated in the durable goods sector. When war was declared in September 1939, there were virtually no armament works, no production of large ships and large aircraft, no guns and no tanks. Within a few years Canadian plants were turning out naval and merchant ships, war aircraft ranging up to the 15-ton Lancaster bomber, military vehicles, millions of rounds of ammunition and hundreds of other war items. The new volume index of durable manufactures reached a peak of 340 in 1944 but in the following two years it declined sharply to 205 in 1946. Since then it has regained almost half the lost ground and reached 259 in 1950.

Section 2.—Production by Industrial Groups and Individual Industries

Two major changes were adopted in the compilation of manufacturing statistics for 1949. In addition to containing statistics for Newfoundland for the first time, the system of classification was also changed. By the Standard Classification the industries are grouped under the 17 major headings listed in Table 9 instead of the nine groups listed in Table 3 which were formerly used as the main basis of classification. Summary statistics for the main groups on the new basis are given for 1945-51 in Table 10, while 1950 statistics for individual industries are presented in detail in Table 11. Table 13 gives the industries on the basis of the origin of the materials used.

Subsection 1.—Manufactures Classified on the Standard Classification Basis

Table 9 shows the changes in the nature of manufacturing production since the end of World War II with regard to numbers employed, salaries and wages paid, and gross value of products. The values of both wages and products are naturally more affected by price changes than the numbers of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output. Thus, variation in number of employees would normally be less pronounced than that in money values.

Significant changes in the nature of manufacturing production have taken place since 1945. As was to be expected, industries engaged in war production have operated at a substantially lower level and industries producing consumer goods have increased their production. From the point of view of employment, the chemical and allied products group, with a reduction of 33 p.c., experienced the greatest

decline in volume of production between 1945 and 1949. Transportation equipment, which includes aircraft and shipbuilding, was second with a decline of 32 p.c., followed by tobacco and tobacco products with 12 p.c., rubber goods 12 p.c. and iron and steel products 3 p.c. The non-metallic mineral group reported the greatest gain in employment with an increase of 39 p.c., followed by printing, publishing and allied trades 31 p.c., wood products 29 p.c., electrical apparatus and supplies 27 p.c., products of petroleum and coal 26 p.c., paper products 21 p.c., textiles (except clothing) 19 p.c., clothing (textile and fur) 18 p.c., food and beverages 8 p.c., leather products 2 p.c. and non-ferrous metal products 1 p.c. For manufacturing as a whole there was an increase of 4 p.c. in the number of employees with an increase of 39 p.c. in the amount of salaries and wages paid. Although there was an increase of 50 p.c. in the gross value of production, the increase in the physical volume was not as marked. This was caused by the rise in the wholesale prices of fully and partly manufactured products.

Between 1949 and 1950, for manufacturing as a whole, there was an increase of 11 p.c. in the gross value of production, 7 p.c. in salaries and wages and 1 p.c. in employment. In terms of gross value of production of specific industries the largest gain of 34 p.c. was made by rubber products, followed by electrical apparatus and supplies with 19 p.c., and wood products with 17 p.c. Large gains were also made by transportation equipment, textile products (except clothing) and non-metallic mineral products.

9.—Percentage Variations in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups, 1949 Compared with 1945, and 1950 with 1949.

Table 11 presents, for the year 1950, detailed statistics of the individual industries under which all industrial plants in Canada are classified. In interpreting these figures it should be remembered that they do not refer to individual products but to all the products made in an industry. For example, the value of production of the confectionery industry amounting to \$104,853,748 does not imply that this was the value of confectionery produced. What it means is that the firms whose principal product is confectionery had a value of production of \$104,853,748. This figure, in addition to confectionery, includes all the subsidiary products made by these firms, such as ice cream, which was valued at \$2,214,689, and bread and other bakery products valued at \$2,457,312. Confectionery is also produced as a subsidiary product by firms credited to other industrial classifications. The quantities and values of the principal individual commodities produced are given in Table 12. Commodities produced in small quantities are not included but the list covers approximately 75 p.e. of total production.

Subsection 2.—Manufactures Classified by Origin of Materials

The distinction made between farm materials of Canadian and of foreign origin is based on whether materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods,

A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. The industries of the mineral group in 1950 employed the largest number of persons and paid out by far the highest amount in salaries and wages. The average salary and wage was \$2,679 for the mineral group and \$2,051 for the farm group.

13.—Principal Statistics of Manufacturing Industries, classified according to Origin of Material Used, by Main Group, 1939, 1944, 1949 and 1950

Subsection 3.—Manufactures Classified by Type of Ownership

Figures showing the classification of manufacturing establishments by type of ownership are available from 1946, although the figures for that year are not strictly comparable with those for succeeding years owing to the later inclusion of the fish curing and packing industry.

Of the 35,942 establishments operating in 1950, 1,319 in the periodical publishing industry were not classifiable. Thus, the percentages for 1950 presented in Tables 14 and 15 are based on a total of 34,623 establishments.

As is to be expected, the smaller establishments, regardless of type of products manufactured, are carried on under individual ownership. In that category, industries conducted on a small scale contain a large number of establishments, the percentage decreasing as the scale of operation increases, as the following figures for 1950 show:—

Group	Average Number of Employees per Establishment	Percentage of Individual Ownership Establishments to the Total
Wood products.....	11.2	63.9
Printing, publishing and allied trades.....	16.3	47.0
Food and beverages.....	20.0	48.6
Miscellaneous manufacturing industries.....	27.0	32.9
Non-metallic mineral products.....	28.3	34.3
Clothing (textile and fur).....	38.1	27.8
Chemicals and allied products.....	40.1	16.8
Leather products.....	44.1	31.4
Iron and steel products.....	68.8	25.9
Non-ferrous metal products.....	83.4	27.0
Textiles (except clothing).....	94.9	27.5
Paper products.....	146.8	9.5
Tobacco and tobacco products.....	151.8	39.7
Electrical apparatus and supplies.....	157.8	14.4
Transportation equipment.....	173.3	33.3
Products of petroleum and coal.....	199.7	1.3
Rubber products.....	357.6	8.2
ALL GROUPS.....	32.9	45.6

14.—Percentage Distribution of Establishments in Manufacturing Industries,¹ classified by Type of Ownership, by Province and Industrial Group, 1950, with Totals for 1946-50.

¹ Four main categories of ownership only; the non-classifiable group is not included.

On the basis of employment provided, incorporated companies are by a very wide margin the most important factor in the employment field and establishments operating under individual ownership are not as important as their large numbers would seem to indicate.

15.—Percentage Distribution of Employment in the Manufacturing Industries,¹ classified by Type of Ownership, by Province and Industrial Group, 1950, with Totals for 1946-50.

¹ Excludes Newfoundland.

Subsection 4.—Leading Manufacturing Industries

The rank of the ten leading industries in 1950, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922 in the following statement:—

Industry	1922	1929	1933	1939	1944	1949	1950
Pulp and paper.....	2	1	1	2	5	1	1
Slaughtering and meat packing.....	3	2	3	3	1	2	2
Motor-vehicles.....	6	4	11	5	7	4	3
Non-ferrous metal smelting and refining.....	1	9	2	1	2	3	4
Petroleum products.....	9	10	6	6	14	5	5
Sawmills.....	4	5	14	8	11	6	6
Primary iron and steel.....	20	16	31	11	13	8	7
Butter and cheese.....	5	6	5	4	10	7	8
Cotton yarn and cloth.....	8	23	27	13	23	12	9
Flour mills.....	1	3	4	7	12	10	10

¹ Did not rank among the forty leading industries in 1922.

The depression of the 1930's resulted in a rearrangement in the ranking of many industries which in some cases proved to be temporary. Also, during World War II the industries engaged in producing war equipment, such as shipbuilding, aircraft, automobiles and miscellaneous chemical products, advanced to higher positions but when the War ended industries engaged in the production of consumer goods again advanced their positions. Pulp and paper, after a lapse of a number of years, resumed its premier place in 1948. With two exceptions, the industries in the lead in 1950 remained in the first ten places in 1951, although the order was changed slightly. Motor-vehicles and non-ferrous metal smelting and refining, in third and fourth places, respectively, in 1950, were reversed in 1951. Cotton yarn and cloth in ninth place and flour mills in tenth place in 1950 dropped to twelfth and eleventh places, respectively, in 1951 and were replaced by rubber goods moving up from eleventh place to ninth and railway rolling-stock from sixteenth to tenth.

17.—Principal Statistics of the Forty Leading Industries, ranked according to Gross Value of Products, 1950

Section 3.—Principal Factors in Manufacturing Production

Subsection 1.—Salaries and Wages in Manufacturing Industries

Statistics of earnings and hours of work of wage-earners and salaried employees in manufacturing will be found in Chapter XVII on Labour.

In 1950, the 35,942 manufacturing establishments employed 231,053 salaried employees and 952,244 wage-earners, a total of 1,183,297 persons. Out of every 1,000 persons employed in these industries, 195 were classed as salary-earners and 805 as wage-earners; the former earned 25 p.c. and the latter 75 p.c. of the total amount paid out as remuneration for services. It is interesting to note the reduction in the disparity between average annual salaries and wages that has taken place in recent years. Whereas, in 1939, average annual wages were only 56 p.c. of average annual salaries, in 1943 the percentage rose to 76, declined to 69 in 1947 and increased to 73 in 1950.

19.—Total and Average Annual Salaries and Wages Paid in Manufacturing Industries, Significant Years, 1917-50

NOTE.—The averages of wage-earners and earnings for the years 1933-45 are strictly comparable with those for the years up to 1924 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

Year	Annual Salaries				Annual Wages

Ontario has a larger proportion of females among its salaried employees than any of the other provinces. This situation prevails in Quebec with regard to wage-earners owing, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment for females is strikingly illustrated by the fact that, of all female wage-earners engaged in the manufacturing industries of Canada in 1950, 44 p.c. were classed in the textile group.

The average salary in 1950 amounted to \$2,998 which was \$1,252 or 72 p.c. higher than in 1939. Salaried employees in Ontario with \$3,150 were the highest paid, those in Quebec second with \$2,981, followed by British Columbia with \$2,871 and Manitoba with \$2,818. The location of head offices of many large corporations at Montreal, Toronto, Winnipeg and Vancouver tends to raise the average salaries in the provinces in which these cities are located.

The average wage in 1950 amounted to \$2,183 which was \$1,208 or 124 p.c. higher than in 1939. The manufacturing industries of Newfoundland paid the highest average wage of \$2,626, displacing British Columbia which formerly occupied the premier position. British Columbia followed with \$2,393, Ontario with \$2,328, Saskatchewan with \$2,115 and Alberta with \$2,113. The high figures shown for the Yukon and Northwest Territories in regard to average wages reflect the unusual conditions under which industry is carried on in these regions and are not representative. Statistics of the distribution of employees by province and by industrial group, together with average annual earnings, are given in Table 20.

20.—Total and Average Annual Salaries and Wages Paid in Manufacturing Industries, by Province and Industrial Group, 1950

Average Annual Earnings in the Forty Leading Industries.—In 1950 there were 31 industries in which the average salary was \$3,000 or over, compared with 20 industries in this range in 1949. The rapidly changing pattern of remuneration in manufacturing is shown by the fact that in 1945 the highest average salary paid was \$2,935 reported by the brewing industry. The highest average salary in 1950 was \$4,455 received by office and supervisory employees in the brewing industry. Of the other nine leading industries, five had average salaries of between \$2,500 and \$3,000 and four were below \$2,500. The sawmill and butter and cheese industries, with \$1,465 and \$1,925, respectively, paid the lowest salaries among the forty leading industries.

The increase in average wages since 1945 paralleled that of salaries. There were 30 industries averaging over \$2,000 in 1950 compared with only four in 1945. In 1945 the highest average annual wage was \$2,365 paid by the motor-vehicle industry while in 1950 the highest was \$3,051 paid by the pulp and paper industry. The highest wages are usually paid by industries in which the proportion of skilled workers is high and the proportion of female workers low. There were 13 industries in 1950 with average wages of \$2,500 or over and 17 in which the average ranged between \$2,000 and

\$2,500. In the other 10 industries of the forty leading industry group average wages were below \$2,000. This latter group includes industries made up of a large number of small establishments in which the proportion of female workers is high, such as men's factory clothing, women's factory clothing, hosiery and knitted goods, leather boots and shoes, fruit and vegetable preparations, and paper boxes and bags.

21.—Annual Salaries and Wages Paid in the Forty Leading Industries, 1950, with Comparative Figures of Annual Average Salaries and Wages Paid in 1949

NOTE.—Industries ranked according to the aggregate salaries and wages paid.

Average Earnings of Wage-Earners.—In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has a very definite regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in the latter industries naturally command relatively higher wages than those in industries where employees are routine workers.

The ranking of provinces and industries as regards annual earnings is, in many cases, different from that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture.

The figures for the years 1941 to 1945 given in Table 22 are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all the firms. For a particular industry, however, the month of highest employment is more significant as in such case it coincides for a great number of firms engaged in the same industry. The figures for 1946 to 1950 are based on returns received from establishments employing 15 persons or over; figures for 1946 and 1947 refer to the last week in November, whereas those for later years refer to the last week in October.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to \$50.93 in 1950, an increase of \$28.70 or 129 p.c. as compared with 1939. Average hourly earnings advanced from 46.2 cents in 1939 to \$1.14 in 1950, an increase of 147 p.c. Annual average earnings at \$2,419 were 125 p.c. higher.

Female wage-earners received an average of \$29.00 per week in 1950, an increase of \$16.22 or 127 p.c. over 1939. Hourly earnings at 72.5 cents were 156 p.c. higher, and annual average earnings at \$1,376 were 122 p.c. higher.

22.—Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners Employed in Manufacturing Industries, 1941-50

NOTE.—Butter and cheese factories and fish-curing and -packing plants are excluded in the years 1940 to 1945, while sawmills are also excluded in 1945. By including sawmills, weekly earnings in 1945 would have been about \$34.35 for male wage-earners.

Average Earnings of Salaried Employees.—Beginning with 1946, the survey of weekly earnings and hours worked by wage-earners was expanded to include salaried employees. The survey covers establishments employing 15 persons or over and refers to the last week in November for 1946 and 1947 and to the last week in October for 1948-50. Earnings and hours worked are reported for male and female wage and salary earners in 13 groups of hours, ranging from 30 or less to 65 or more. The earnings reported for the week constitute the gross amount paid before deductions for income tax, unemployment insurance, etc. Weekly and hourly earnings as well as hours worked are thus obtained directly from the tabulated results of the reports. Annual earnings are calculated on the basis of weekly earnings correlated with the results of the annual Census of Industry.

Percentages of Salaries and Wages to Net Value of Products.—Table 29 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent, taxes, repairs and all other overhead charges that ordinarily must be met. The percentage of salaries declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, the percentage of salaries to value added was above normal owing to decreased industrial activity. It should be borne in mind, however, that salaried employees increased 230 p.c. during the period 1924-50 while wage-earners increased 128 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be adjusted more rapidly to the activity of the industry and wage levels likewise may be adjusted more readily to the price levels of the products. Of the increase in the net value of production since 1939, 46 p.c. was passed along in increased salaries and wages.

29.—Percentage of Salaries and Wages Paid to the Total Net Value of Manufacturing Production, 1941-50

¹ Equivalent to "net value of products"; see footnote 1, Table 1, p. 620.

Subsection 2.—Capital, Repair and Maintenance Expenditures

Prior to 1944 the following information on capital investment was collected: (1) fixed capital—land, buildings, fixtures, machinery, tools and other equipment; and (2) working capital—inventory value of raw materials, stocks in process, fuel and miscellaneous supplies on hand; inventory value of finished products; cash, bills and accounts receivable, prepaid expenses, etc. This information was replaced in 1944 by the collection of expenditure statistics on fixed capital, repairs and maintenance. Although it is now impossible to calculate the total investment in the fixed and current assets in manufacturing, it is still possible to calculate the investment in fixed assets. Total investment in fixed assets can be obtained with an approximate degree of accuracy by starting with the total investment in 1943, which amounted

to \$6,317,000,000, and adding the expenditures to date and then deducting on a straight-line basis the normal rates of depreciation allowed by the Income Tax Department. Comparative figures of the investment in fixed assets since 1939 are as follows:—

Year	Amount	Average per Employee
	\$	\$
1939.....	2,168,900,000	3,296
1943.....	3,002,900,000	2,420
1948.....	4,055,500,000 ^r	3,509 ^r
1949.....	4,262,800,000 ^r	3,640 ^r
1950.....	4,394,700,000	3,714

Between 1939 and 1943 there was a decrease of \$876 in the value of fixed assets per employee, owing to a decline in the replacement of and additions to buildings and equipment during the war years and also to an increase in the number of shifts worked and a resulting increase in number of employees. After the War, investment in fixed assets increased rapidly. Old plants were modernized and new plants were built to take care of expanded home markets resulting from higher purchasing power and increased population. The net result in this development was an increase of \$418 in the value of buildings and equipment per employee between 1939 and 1950.

Of the total capital expenditure by manufacturers in 1950 amounting to \$502,500,000, 15.6 p.c. was reported by the paper-products group of industries, 15.0 p.c. by the food group, 8.8 p.c. by iron and steel, 6.5 p.c. by petroleum and coal, 5.9 p.c. by wood products, 5.5 p.c. by the textile industries (except clothing), 5.4 p.c. by transportation equipment, 5.2 p.c. by chemical products, etc.

Subsection 3.—Size of Manufacturing Establishments

The size of a manufacturing establishment is generally measured either by the value of product or by the number of employees but each of these methods has its limitations. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. The latter takes no account of the differences in capital equipment at different times or in various industries and, obviously, the increased use of machinery may lead to an increase in production concurrently with a decrease in number of employees.

Size as Measured by Gross Value of Products.—In 1929, the 719 establishments producing over \$1,000,000 each had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the total for all manufacturing establishments. In 1931 the number of plants in that category was 482, their output being valued at \$1,451,658,954, or 53 p.c. of the total. However, by 1944, war demands resulted in manufacturing establishments with a production of \$1,000,000 increasing in number to 1,376 with an output of about 75 p.c. of the total value of manufactures. In 1946, with the decline in production of the large war plants, the manufactures of establishments with an output of \$1,000,000 or over declined to 67 p.c. of the total manufactures although the number of plants increased to 1,442. In 1947, the number of plants increased to 1,716 and production to the total was 72 p.c. As a result of increased prices and expansion in the physical volume of production in the years 1947-50, establishments with a production of \$1,000,000 or over increased to 2,047 in 1950 and their contribution to the total output rose to 76 p.c.

31.—Manufacturing Establishments and Total and Average Production, classified by Value of Product Group, 1929, 1939, 1944 and 1950

Size as Measured by Number of Employees.—In 1929, establishments employing 501 or more persons accounted for 27 p.c. of the total number of employees engaged in manufacturing. The tendency then in evidence of increasing concentration of production into larger units was checked by the depression, the proportion decreasing in 1933 to 21 p.c. (central electric stations included) but rising again to 26 p.c. in 1939. The same also held true for establishments employing 101 or more persons. In 1929 they employed 62 p.c. of the total, in 1933, 56 p.c., and in 1939, 62 p.c.

The effect of World War II on the concentration of industries into large units is illustrated by the increase in the number of establishments employing 500 or more hands. In 1939 such establishments numbered 172 and employed 26 p.c. of the employees engaged in manufacturing; by 1944 the number had increased to 383 and the percentage of total employees to 47. In a further subdivision of this group in 1944 it was found that 226 establishments employed between 500 and 999 persons, 56 between 1,000 and 1,499, and 101 employed over 1,500. There were 12 plants employing over 7,000 persons, the largest having an employment of slightly over 13,000.

As a result of the resumption of peace-time production, the larger establishments declined in size so that, by 1950, only 56 establishments employed over 1,500 persons. The largest plant employed over 13,000 persons, one other employed over 8,000 and four employed between 6,000 and 8,000 persons.

Size of Establishment in Leading Industries.—Table 34 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of non-ferrous metal smelting and refining, motor-vehicles, railway rolling-stock, cotton yarn and cloth, rubber goods, pulp and paper, primary iron and steel and heavy electrical machinery. On the other hand, the

degree of concentration is low in such industries as fruit and vegetable preparations, bread and other bakery products, sawmills, furniture, butter and cheese, women's factory clothing and miscellaneous foods.

34.—Percentage Importance of Establishments, each Employing 200 or more Persons, in the Leading Industries, 1950

PART III.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

Section 1.—Provincial Distribution of Manufacturing Production

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1950 amounted to \$10,965,427,271 or 79 p.c. of the total gross value of manufactured products.

Table 1 shows the outstanding predominance of these two Provinces in each industrial group. In 1950, Quebec led in the manufacture of tobacco and tobacco products, textiles (except clothing), clothing (textile and fur), paper products and products of petroleum and coal. In the production of wood products, British Columbia with 39 p.c. held the dominant position, outranking both Ontario and Quebec which accounted for 26 and 21 p.c., respectively, of total production. In each of the other industrial groups, Ontario led by a wide margin.

¹ Excludes fish processing.² Includes tobacco and tobacco products, leather products and products of petroleum and coal, figures for which are confidential and cannot be published separately.³ Includes tobacco products, leather products, textile products, clothing (textile and fur), non-metallic mineral products and chemicals and allied products, figures for which are confidential and cannot be published separately.⁴ Includes electrical apparatus and supplies, figures for which are confidential and cannot be published separately.⁵ Includes non-ferrous metal products and products of petroleum and coal, figures for which are confidential and cannot be published separately.⁶ Includes rubber products, figures for which are confidential and cannot be published separately.⁷ Includes leather products and non-ferrous metal products, figures for which are confidential and cannot be published separately.⁸ Includes printing, publishing and allied trades, non-ferrous metal products, products of petroleum and coal, and miscellaneous industries, figures for which are confidential and cannot be published separately.

The degree of concentration of manufacturing production in large units is illustrated in Table 2. In 1950, 39.2 p.c. of all persons engaged in manufacturing in Newfoundland were working in establishments having 500 or more employees, as compared with 33.4 p.c. for Canada as a whole. Before the entry of Newfoundland into Confederation, Ontario had the greatest concentration in the largest units; in 1950 that Province ranked second with 37.4 p.c. of its employees in establishments employing 500 or more persons. Quebec ranked third with 34.9 p.c. followed by New Brunswick with 28.5 p.c., Nova Scotia 24.7 p.c., British Columbia 23.3 p.c., Manitoba 19.4 p.c. and Alberta 9.0 p.c. There were no plants in either Prince Edward Island or Saskatchewan in that category.

2.—Concentration of Manufacturing Production in each Province, 1950

Subsection 1.—The Manufactures of the Atlantic Provinces

Manufacturing production in Newfoundland is dominated by the forest and fisheries resources. Pulp and paper is the leading industry followed by sawmilling, these two industries together accounting for 71 p.c. of the total production of the Province in 1950. No information is available regarding the processing of fish products and the position of that industry in 1950 in the economy of the Province cannot be evaluated.

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish curing and packing, and prepared stock and poultry feeds the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of fish curing and packing, primary iron and steel, railway rolling-stock, sawmills, pulp and paper, shipbuilding and repairs, and butter and cheese. In addition, important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, while fish and agricultural products add to the varied output.

3.—Statistics of the Leading Industries of the Atlantic Provinces, 1950

¹ Includes: biscuits; miscellaneous foods, *n.e.s.*; and tobacco, cigars and cigarettes.

fish processing.

³ Includes: bags, cotton and jute; fertilizers; slaughtering and meat packing.

⁴ Includes: cotton yarn and cloth; wire and wire goods; coke and gas; petroleum products; and breweries.

⁵ Includes: breweries; sugar refineries; cotton yarn and cloth; synthetic textiles and silk; railway rolling-stock; shipbuilding and repairs; brooms, brushes and mops; brass and copper products; and gypsum products.

Subsection 2.—The Manufactures of Quebec

Quebec contributes about 30 p.c. of the total value of manufactured products of Canada. Quebec's forests, water powers, minerals and agricultural lands, its extensive highway system and also its geographic position astride the St. Lawrence estuary permitting sea-going vessels to reach its main centres of population up to 800 miles inland, are among the assets that have tended to develop manufacturing industries and have enabled over 4,000 new industrial plants to be opened in the past five years. In addition, Quebec has a stable and industrious population, an important factor in industries such as textiles, clothing, leather boots and shoes, etc., in which large labour forces are required. The production of pulp and paper occupies the premier position, accounting for about 10 p.c. of the gross value of Quebec manufactures and for over 44 p.c. of the Canadian total for this industry. Other large industries in which Quebec predominates are: tobacco, cigars and cigarettes; cotton yarn and cloth; leather boots and shoes; men's factory clothing; women's factory clothing; railway rolling-stock; silk and artificial silk; medicinal and pharmaceutical preparations; fur goods; and corsets.

Quebec produces 65 p.c. of all cotton goods made in Canada, 60 p.c. of all rayon fabrics and 40 p.c. of the woollen and knitted goods. Two of the most important industrial developments in the Province are the Ungava iron projects and the new titanium industry.

4.—Statistics of the Leading Industries of the Province of Quebec, 1950

Percentages of leading industries to all industries.....	69.5	69.2	70.2	76.8	72.9	75.1

¹ Sugar refining is also a leading industry, but statistics cannot be published because there are fewer than three establishments.

Subsection 3.—The Manufactures of Ontario

Despite the great industrial progress made by other provinces, Ontario in 1950 produced over 49 p.c. of the nation's manufactured goods. Many more industrial areas are being created as new industries and self-contained factory expansions of existing industries are going to the smaller towns. A vast increase in steel-ingot capacity is being made possible by developments at Steep Rock Iron Mines and Ontario will play a role commensurate with its position on the Great Lakes waterway which links the wide range of natural resources of forests, minerals and water power with one of the most densely populated regions on the Continent. At Sarnia, huge investments are going into plant for a whole group of new products based on the oil flowing through the Edmonton-Superior pipeline and being shipped across the Great Lakes. Other significant developments are taking place in synthetic rubber and industrial and consumer chemicals. Recent expansions in the electrical industries are not only keyed to defence needs but to the needs of the population which is expanding in Ontario at the rate of 10,000 a month. In addition to the large automotive plants in Ontario, three United States automobile producers opened new plants in the Province in 1950. Expansion has also taken place in many other lines including wood, metal and paper products, textiles, tools, farm implements, building products, food products, leather goods, glass and plastics.

Ontario also has the greatest diversification of manufacturing production of any province. Certain industries, such as the manufacture of motor-vehicles, motor-vehicle parts, agricultural implements, heavy electrical machinery, starch and glucose, machine tools, bicycles and parts, miscellaneous non-ferrous metal products, and carpets, mats and rugs are carried on almost exclusively in Ontario. Of the 40 leading industries in Canada in 1950, a substantial number were dominated by Ontario's share of the total production. These industries, with the percentage that the Ontario production of each bears to the 1950 total for Canada, are: motor-vehicles 98; motor-vehicle parts 98; heavy electrical machinery 96; agricultural implements 94; rubber goods 83; primary iron and steel 76; iron castings 70; miscellaneous paper products 60; sheet metal products 59; brass and copper products 59; printing and bookbinding 58; industrial machinery 57; confectionery 57; paper boxes and bags 56; furniture 52; and flour mills 48.

In the case of the smaller industries, too, Ontario dominates the field. In 1950, Ontario contributed more than 75 p.c. of the Canadian total for the following industries: machine tools 100; bicycles and parts 99; carpets, mats and rugs 96; tobacco processing and packing 94; typewriter supplies 92; miscellaneous non-ferrous metal products 91; soaps, washing compounds and cleaning preparations 90; wine 89; breakfast foods 89; inks 88; artificial abrasives 87; leather tanning 86; batteries 85; scientific and professional equipment 84; boilers and plate work 81; automobile accessories, fabric, 81; cordage, rope and twine 80; woollen yarn 79; jewellery and silverware 76; sporting goods 75; toys and games 75; refrigerators, vacuum cleaners and appliances 73; feed mills 71; household, office and store machinery 69; and animal oils and fats 63.

Subsection 4.—The Manufactures of the Prairie Provinces

The leading industries of the Prairie Provinces are those based on agricultural resources—grain-growing, cattle-raising and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The greatly increased production of crude petroleum in Alberta as well as the widespread use of motor-vehicles and power machinery on farms in the three provinces has given rise to the establishment and rapid development of petroleum refining. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other Provinces.

Its natural resources of accessible water power, forests and, more recently, minerals, have created considerable diversification of industrial production. While agriculture continues to play the main economic role in Saskatchewan, both oil and metal wealth are being developed.

Considering the Prairie Provinces as an economic unit, slaughtering and meat packing had the largest gross value of production in 1950, amounting to \$221,776,029, followed by petroleum products with \$115,140,064, flour mills \$97,789,996, butter and cheese \$78,799,591 and railway rolling-stock \$40,208,465. These five industries accounted for about 50 p.c. of the total production of the Prairie Provinces. Other leading industries, in order of gross value of production, were: bread and other bakery products, breweries, men's factory clothing, printing and publishing, saw-mills, planing mills, prepared stock and poultry feeds, furniture, aerated waters, women's factory clothing, printing and bookbinding, pulp and paper, miscellaneous foods, sheet metal products, etc.

6.—Statistics of the Leading Industries of the Prairie Provinces, 1950

¹ Publication of these figures authorized by the two firms concerned.² Includes bridge-building and structural steel, non-ferrous metal smelting and refining, malt and malt products, and biscuits.³ Although non-ferrous metal smelting and refining is also a leading industry, figures cannot be given because there are fewer than three establishments.⁴ Includes paper boxes and bags, cement, condensed milk, fertilizers, gypsum products glass and glass products, malt and malt products, and sugar refineries.

Subsection 5.—The Manufactures of British Columbia

Forest resources have made British Columbia the third most important manufacturing province of Canada. British Columbia is currently succeeding in providing a solid foundation for its industrial development by pushing factories and plants into more remote sections and drawing greater value in employment and dollars from its natural resources without increasing the strain on those resources at too fast a rate. One of the most impressive fields of expansion is to be found in the pulp and paper industry. British Columbia accounts for approximately one-half of the total fisheries production of Canada and plays a large part in making Canada the largest fish-exporting nation in the world. This Province has been significantly influenced also by recent developments in the petroleum products and meat-packing industries.

Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked first with a gross value of production of \$293,022,294, and the pulp and paper industry second with \$86,886,870. Third in importance was fish curing and packing, based principally on the estuarial salmon fisheries. Other important industries are: slaughtering and meat packing, petroleum products, fertilizers, planing mills, veneers and plywoods, miscellaneous food products, fruit and vegetable preparations, butter and cheese, etc. The varied resources of the Pacific Coast have resulted in a wide diversification of its manufactures.

7.—Statistics of the Leading Industries of the Province of British Columbia, 1950

¹ Other leading industries for which statistics cannot be given because there are fewer than three establishments in each industry are: non-ferrous metal smelting and refining, sugar refining, and bridge building and structural steel.

Section 2.—Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of the labour forces. In the west the cities are more largely distributing centres, though manufactures are increasing rapidly there also.

Table 8 indicates the extent to which the manufacturing industries of Canada are concentrated in urban centres and shows, by provinces, the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized Provinces of Ontario and Quebec such cities and towns in 1950 accounted for 94 p.c. of the total manufactures for those Provinces, while in the Atlantic Provinces and British Columbia, where sawmilling, fish packing, and dairying are leading industries, the proportions were 67 p.c. and 60 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

8.—Urban Centres, each with a Gross Manufacturing Production of over \$1,000,000, Number of Establishments and Production in these Centres as a Percentage of the Provincial Total, by Province, 1950.

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 11, pp. 677-682, since the table below includes statistics of towns with fewer than three establishments and production of over \$1,000,000 each. It is not possible to publish this information in Table 11 without disclosing the operations of individual establishments.

Province or Territory	Urban Centres with a Gross Production of over \$1,000,000 each	Establishments Reporting in Urban Centres Producing over \$1,000,000 each	Total Production in Urban Centres Producing over \$1,000,000 each	Total Production in each Province	Production in Urban Centres as a Percentage of Total Production in each Province

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—The Government in Relation to Labour

Subsection 1.—Federal Labour Legislation

The Federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department assumed, too, the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

At present, in addition to the statutory duty of disseminating information concerning labour and industrial matters, the Minister of Labour is responsible for the administration of certain statutes: Conciliation and Labour Act, 1906; Government Annuities Act, 1908; Fair Wages and Hours of Labour Act, 1935; Unemployment Insurance Act, 1940; Vocational Training Co-ordination Act, 1942; Reinstatement in Civil Employment Act, 1946; Merchant Seamen Compensation Act, 1946; Government Employees Compensation Act, 1947; and Industrial Relations and Disputes Investigation Act, 1948. (See also pp. 87-88.)

Fair Wages Policy.—Wages and hours of work on contracts for construction and for the manufacture of equipment and supplies for the Federal Government were governed for some years by a Resolution of the House of Commons (1900) which was later incorporated in an Order in Council and amended from time to time. Contracts for construction are now regulated under the Fair Wages and Hours of Labour Act, 1935, and by an Order in Council of June 7, 1922, as amended Apr. 9, 1924, and May 2, 1949, and consolidated in November 1949. Hours on such work are limited to eight per day and 44 per week except in an emergency or in special

* Except as otherwise noted, this Chapter has been revised under the direction of A. H. Brown, Deputy Minister, Department of Labour, Ottawa.

cases where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district concerned or, if there are no current rates, fair and reasonable ones determined by the Minister of Labour.

Wages and hours for work on contracts for equipment and supplies are regulated by the Order in Council of 1922 as amended on Dec. 31, 1934, and May 2, 1949. The hours on such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable, but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed.

On Sept. 24, 1952, the Order in Council above referred to was amended to provide that all types of contracts to which the Order is applicable, entered into on and after Jan. 1, 1953, shall contain a clause prohibiting discrimination against any employee because of race, national origin, colour or religion, or because the employee has made a complaint or given information with respect to such discrimination.

The Industrial Relations and Disputes Investigation Act.—This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations, P.C. 1003, in effect since March 1944, and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively, that trade unions may be certified as bargaining agents for groups of employees, and that trade unions and employers are required upon notice to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade-union activity. The conditions precedent to strike and lockout action are provided in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards and industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, the Canada Labour Relations Board has received 408 applications for certification since Sept. 1, 1948, 242 being granted, 94 rejected, 61 withdrawn and 11 pending at Mar. 31, 1953.

Of the 191 industrial disputes dealt with under the conciliation provisions of the Act, 143 were settled by conciliation officers and conciliation boards, 20 were not settled, 8 lapsed and 20 were pending at Mar. 31, 1953.

Subsection 2.—Provincial Labour Legislation

Labour legislation in Canada is, for the most part, a matter for the provincial legislatures since it usually governs, in some respects, the contract of service between employer and employee or the contract between members of a trade union which forms the basis of the union, or it regulates conditions in local work-places. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the provincial legislatures, grants to the provinces power to enact laws in relation to "civil rights" and, with certain exceptions, "local works and undertakings".

In each province, except Prince Edward Island, a Department of Labour (in Alberta, the Department of Industries and Labour) is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines.

Factory legislation in eight provinces and shops legislation in several provinces prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Other labour statutes in most provinces include minimum-wage legislation and maximum-hours laws, legislation to ensure freedom of association, to promote collective bargaining and to provide for the settlement of industrial disputes, and laws to provide for apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts in Nova Scotia, New Brunswick, Ontario and Saskatchewan, the Alberta Labour Act and the Fair Wage Act in Manitoba enable the wages and hours of work agreed upon at a conference of representatives of employers and employees in designated trades to be made legal throughout the trade concerned. The Quebec Collective Agreement Act permits collective agreements between employers and trade unions to be made binding on all in the industry. Workmen's compensation laws in all provinces are administered by independent boards.

Provincial labour legislation enacted in 1952 is outlined in the following paragraphs.

Newfoundland.—Amendments made in 1952 to the *Workmen's Compensation Act, 1950*, raise the amount payable for the funeral expenses of a deceased workman from \$125 to \$200 and increase the monthly allowance for each dependent child under 16 years of age from \$10 to \$12. The waiting period is shortened from six to four days, that is, no compensation other than medical aid is now payable for a disability that lasts fewer than four days. A further amendment fixes a higher minimum for temporary total disability; a workman must now receive \$15 a week or the full amount of his average weekly earnings if less than \$15, the former minimum being \$12.50 or earnings, if less. Other amendments authorize the Workmen's Compensation Board to grant a daily subsistence allowance to a workman undergoing treatment away from home, and to assess and collect a surcharge from employers in any class to establish a second injury fund.

Prince Edward Island.—The *Workmen's Compensation Act, 1949*, was amended to increase the rate of compensation for disability from 66 $\frac{2}{3}$ to 75 p.c. A totally disabled workman may now receive a weekly payment equal to 75 p.c. of his average weekly earnings before the accident, and a partially disabled workman an amount equal to 75 p.c. of the difference in his average weekly earnings before and after the accident. A monthly allowance of \$25, instead of \$20, is provided for an orphan child of a deceased workman, subject to a maximum of \$100 a month for a family of orphans.

Nova Scotia.—The *Apprenticeship Act, 1952*, which replaced a 1937 Act, is designed to give further encouragement to apprentice training in that it may be applied to a trade in a specific plant or a certain area even if the trade is not designated for the whole Province. Previously, designated trades were given province-wide application.

The Act provides for a system of apprenticeship under which a person may enter into an apprenticeship agreement with an employer in a designated trade for a period of at least two years of reasonably continuous employment and related class instruction. In the designated trades, which now include the trade of machinist as well as seven building trades and the motor-vehicle repair trade, no person under 21 years of age may be employed for more than three months unless he is an apprentice or holds a certificate of qualification under the Act, except in special circumstances with the consent of the Minister of Labour.

The powers and duties of the Director of Apprenticeship and of the advisory committees are more clearly defined.

Amendments to the *Workmen's Compensation Act*, effective from Apr. 1, 1952, increase the maximum annual earnings on which compensation is computed from \$2,500 to \$3,000, the minimum amount payable to a workman permanently and totally disabled from \$75 to \$85 a month, and the sum payable for burial expenses from \$150 to \$200. A new provision permits the Workmen's Compensation Board to require a workman to be examined by a medical referee selected by the Minister of Labour.

The *Coal Mines Regulation Act, 1951*, was amended to direct that greater precautions be taken in mines against the hazards of fire and explosion.

The application of the *Steam Boiler and Pressure Vessel Inspection Act* is extended to refrigeration plants.

New Brunswick.—Several of the benefits under the *Workmen's Compensation Act* are increased: the monthly allowance for a widow or invalid widower from \$40 to \$50, for each child under 18 years of age from \$10 to \$12, and for each orphan child from \$20 to \$25. The minimum payment of \$12.50 a week for a workman who suffers temporary total disability is raised to \$15. As before, a workman whose average weekly earnings are less than the minimum must receive the full amount of his earnings.

The *Labour Relations Act, 1949*, was amended to provide that, without the consent of the Labour Relations Board, the membership records of a union produced for the Board's use may not be disclosed and no one may be compelled to state whether any person is or is not a member of a union. Other amendments enable the Board to obtain the necessary evidence for determining whether a union applying for certification has the support of a majority of the employees in a proposed bargaining unit and to make regulations determining when a person is a member in good standing of a union.

An amendment to the *Mining Act*, proclaimed in force Aug. 1, 1952, provides for a voluntary revocable check-off of union dues in the coal-mining industry.

Quebec.—Two major changes were made in the *Workmen's Compensation Act*. The maximum amount of annual earnings on which compensation may be computed is raised from \$2,500 to \$3,000 and the rate of compensation for disability was increased from 66 $\frac{2}{3}$ to 70 p.c. The increase in the compensation rate applies only to accidents occurring after Feb. 1, 1952.

Ontario.—Amendments to the *Workmen's Compensation Act* extend its coverage to learners, members of municipal volunteer fire brigades, and persons who are required to assist the police in making an arrest or in preserving the peace.

A minor amendment to the *Factory, Shop and Office Building Act* provides that, in buildings erected after July 1, 1952, outside fire-escapes may not extend above the third floor.

Manitoba.—An amendment to the *Apprenticeship Act*, designed to stimulate apprenticeship training throughout the Province, enables the Lieutenant-Governor in Council to establish selected areas as apprenticeship zones. By a further amendment, provision is made for a special course of combined education and apprenticeship training for an apprentice who does not have the necessary educational qualifications.

The *Workmen's Compensation Act* was amended to extend its coverage to several new industries.

The *Gas and Oil Burner Act, 1952*, to come into force on proclamation, prohibits the sale, installation or use of gas and oil-burning equipment unless it has been approved by the Department of Labour and a permit has been issued for its installation. The new Act also provides that only a licensed person may install such equipment.

Saskatchewan.—The *Equal Pay Act, 1952*, proclaimed in effect from Jan. 1, 1953, requires employers to pay women at the same rate as men when they are employed to do work of comparable character in the same establishment. Charges

of discrimination will be dealt with first by conciliation procedure and then, if necessary, by prosecution. Offenders against the Act are liable to fines of up to \$100. Saskatchewan is the second province to pass an equal-pay law. Ontario passed a similar Act in 1951.

The *Workmen's Compensation (Accident Fund) Act* was amended to raise the ceiling on earnings from \$3,000 to \$4,000 a year, to increase the monthly allowances from \$20 to \$25 for each dependent child under 16 years of age and from \$25 to \$30 for each orphan child, and to raise the minimum monthly payment to the dependants of a deceased workman from \$80 to \$85 where the dependants are a widow or invalid widower and one child, and from \$90 to \$100 where they are a widow or invalid widower and two or more children. These increases apply to all payments made after June 1, 1952, regardless of when the accident occurred.

The *Workmen's Compensation Act, 1911*, which applies to certain classes of railway workers, was amended to raise the maximum amount of compensation payable by the employer. An injured workman may now recover the equivalent of the estimated earnings of a workman in similar employment during the preceding three years or the sum of \$3,500 (previously \$2,500), whichever is greater, but not more than \$4,000 (previously \$3,000). Another amendment enables a Saskatchewan railway worker who works both in the Province and in an adjoining American State to receive compensation if he is injured while working in the adjoining State.

The *Annual Holidays Act* was amended to permit the Lieutenant-Governor in Council to exempt specific classes or groups of employees from the Act.

Alberta.—In accordance with the recommendations of a Special Committee of the Legislature appointed in 1951, the *Workmen's Compensation Act* was amended to raise the maximum amount of annual earnings on which compensation is based from \$2,500 to \$3,000 and to increase the rate of compensation for disability from 66 $\frac{2}{3}$ to 75 p.c. The waiting period is reduced to one day and compensation is now payable from the day after the accident. The minimum weekly payment for total disability is increased from \$15 to \$25, or the full amount of earnings if less than \$25 a week.

Other amendments increase the allowance for funeral expenses from \$175 to \$200 and permit the Board to grant a further allowance of \$100 for the cost of transporting the workman's body from the place of death to his place of residence. The monthly allowance for a dependent child in the care of a remaining parent is raised from \$15 to \$25 but a change from 18 to 16 years is made in the age to which compensation is paid.

An important feature of the revision is that the monthly payments to all widows are brought up to the same level. It is provided that, from Apr. 1, 1952, the allowance of \$50 a month which has been payable since 1948 to widows of deceased workmen will be payable to others widowed before that date. The increased assistance is to be continued until a widow becomes eligible for old age assistance or other pension.

Learners and workers in several new industries are brought under the Act, and the Board is authorized to bring under the Act volunteer employments undertaken in the public interest, e.g., volunteer firemen.

British Columbia.—The *Workmen's Compensation Act* was amended to implement some of the recommendations of Chief Justice Sloan who, in 1949, was appointed Royal Commissioner to inquire into the operation of the Act. The amendments provide that compensation for disability is to be computed on the basis of 70 p.c. of average earnings instead of 66 $\frac{2}{3}$ p.c., and that the limit placed on the amount of annual earnings taken into account be raised from \$2,500 to \$3,600. The minimum weekly payment for total disability is increased from \$12.50 to \$15 or the full amount of average weekly earnings if less than \$15.

Higher benefits to dependants in death cases were made effective from Apr. 1, 1952, regardless of when the accident or disablement occurred. The amendments increase the burial allowance from \$150 to \$250, the monthly allowance for a widow or invalid widower from \$50 to \$75, the payment for a dependent child from \$12.50 to \$20, the benefit for an orphan child from \$20 to \$30, and the maximum amount payable to all dependants, where there is no widow or children, from \$55 to \$75. The hospital insurance premium for widows, invalid widowers and their dependants and for orphan children who are receiving compensation under the Act is now to be paid by the Workmen's Compensation Board.

Regulation of Wages and Hours of Labour.—The regulation of wages and hours of labour of persons in private employment is within provincial jurisdiction and all the provinces, except Prince Edward Island, have legislation on the subject.

In Nova Scotia, the minimum wage law applies only to women; in Ontario, though the Act applies to both sexes, Orders in Council apply only to women. In New Brunswick, Manitoba, Alberta and British Columbia, there are separate Orders for men and women but in British Columbia many Orders cover both sexes. In Quebec and Saskatchewan all Orders apply to both sexes. Under the Newfoundland Minimum Wage Act, 1950, a general Order for male workers is in effect.

In Quebec, under the Collective Agreement Act, hours and wages and also apprenticeship, vacations with pay and family allowances provisions established by a collective agreement voluntarily entered into by employers and unions or groups of employees may be made legally binding by Order in Council on all employers and employees in the industry in the district covered by the agreement, if the parties are sufficiently representative of the industry. At Mar. 31, 1952, 100 agreements had been generalized to apply either throughout the Province or to a certain district. These agreements covered 215,926 workers and 21,409 employers. The agreements in force throughout the Province apply to the following industries: building materials, the manufacture of women's cloaks and suits, dresses, millinery, men's and boys' clothing, men's and boys' hats and caps, men's and boys' shirts, ladies' handbags, fine gloves and work gloves, shoes, furniture, paints, corrugated and uncorrugated paper boxes, tanning and elevator construction. Other agreements concern industries in particular cities or parts of the Province including all building trades and printing trades in the large urban centres and many rural districts. During 1952, an agreement for the structural iron erection industry was extended for the first time and one affecting hospital employees in a certain area was repealed. (For statistics, see pp. 744-745.)

The industrial standards Acts of Nova Scotia, New Brunswick, Ontario and Saskatchewan and the Alberta Labour Act provide that wages and hours agreed upon at a conference of representatives of employers and employees called by the

Minister of Labour or his representative may be made legally binding by Order in Council on the industry in the area concerned. The Nova Scotia Act applies only to construction work at Halifax, Dartmouth and Sydney.

In Nova Scotia, 11 schedules for individual building trades were in force during 1952, including 10 renewals of previous schedules and one new schedule governing plasterers at Sydney made binding for the first time. In New Brunswick, six schedules for individual building trades were in force during 1952. One new schedule governing painters at Saint John replaced the previous schedule which had expired in 1941.

In Ontario, there were 137 schedules in force at Mar. 31, 1951. Throughout the Province schedules were in effect for brewery workers, cloakmakers, the men's and boys' clothing industry, men's and boys' hats and caps and the hard furniture industry. In the construction industry, one schedule covered several building trades in one city, and 57 schedules, each for a single trade in a single locality, covered one or more trades in 28 localities. In other industries also, schedules were in effect for certain zones only: for bakers in one zone, for soft furniture manufacturing in one, for coal hoisting in one, for the coal industry in one, for taxi-drivers in one, for the retail gasoline service in four and for barbers in 65 zones. From Mar. 31, 1951, to the end of 1952, 28 new schedules were made binding, seven of which were made for the first time, including one covering millinery manufacturing throughout the Province.

In Saskatchewan, 16 schedules were in effect at Dec. 31, 1951. One for barbers covered the whole Province; others were in effect for bakers and bakery salesmen, carpenters, electrical workers, painters, shoe repairers and beauty-culture operators in one or more areas. During 1952, a new schedule for carpenters at Swift Current replaced the one rescinded in 1947.

In Alberta, 22 schedules were in effect during 1952. These included, in one or more areas, bakers and bakery salesmen, certain individual building trades, dairy employees, garage and service-station employees, radio-service employees, laundry and dry-cleaning employees and barbers. One new schedule was made binding during the year.

Part II of the Manitoba Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking, except agriculture. Orders in Council, under this legislation, have been passed fixing wages and hours in the barbering and hairdressing trades.

Five provinces, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, have statutes that either place absolute limits on working hours or require time and one-half the regular rate to be paid if work is continued after specified limits. There is, in addition, an Act of limited application in Quebec. In the provinces that have no special hours-of-work legislation, the only statutory regulation of hours, apart from that described above under industrial standards Acts and the Quebec Collective Agreement Act, is that imposed by factories Acts, mines Acts and, in Newfoundland, an Act governing shops. In New Brunswick and Quebec, the limits imposed by the factories Acts apply only to women and boys under 18 years. Several minimum wage Acts give authority for the regulation of hours as well as wages.

Minimum Wage Regulations.—Table 1 shows the minimum rates in effect in May 1953 for several classes of establishments in the principal cities. In Newfoundland, New Brunswick, British Columbia and, with respect to men in Manitoba, the rates set are for the entire province. Elsewhere rates vary according to zone. The rates given apply to the hours specified or to the normal work-week of the establishment, if less, except at Montreal and Winnipeg. No work-week is specified in the Newfoundland Order.

Regulation of Hours and Annual Holidays.—In Ontario, there is a maximum eight-hour day and 48-hour week for the workers to whom the statute applies. In Alberta, the maximum daily and weekly hours in the cities of Calgary, Edmonton, Lethbridge and Medicine Hat are eight and 44; in the remainder of the Province they are eight and 48. In British Columbia, hours are limited to eight in a day and 44 in a week. In these three Provinces, the Acts apply to most workers, except farm labourers and domestic servants. In Saskatchewan, an Act of 1947 requires time and one-half to be paid for work after eight hours daily and 44 hours weekly. The Act applies to workers in all industries except agriculture and domestic service. A Manitoba Act of 1949 requires time and one-half to be paid for work done after eight hours in a day and after 48 hours in a week for men workers and 44 for women. The Act covers most industrial workers in the Province. In all provinces that have Acts regulating hours, longer hours may be worked in an emergency or by permission of the administrative authority.

Six provinces have legislation providing for annual holidays with pay for workers in most industries. In five of these provinces—Quebec, Ontario, Manitoba, Alberta and British Columbia—workers are entitled to a week's holiday with pay after a year of employment. Two weeks' holiday is given in Saskatchewan after a year of employment, in Alberta after two years of employment, and in Manitoba after three years of employment. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for each month. Coal miners in Alberta are entitled to one day's holiday with pay for every 20 days worked in a month but not more than two weeks' holiday in a year.

Farm workers are excluded from the holiday provisions in all provinces and domestic servants in all but Manitoba and Saskatchewan. The Manitoba Act also excludes independent contractors as well as railway and express companies under federal jurisdiction. In addition, Quebec exempts forest operation workers, public corporation employees, salesmen, janitors and watchmen, and certain part-time workers; Ontario, professional workers, salesmen, and funeral directors and embalmers; Manitoba and Saskatchewan, ranch and market-garden employees; and British Columbia, professional workers and horticultural workers.

Section 2.—The Labour Force

Subsection 1.—Labour Force Statistics of the Census of 1951*

The labour force, as defined in the 1951 Census, includes all persons 14 years of age or over who, during the week ended June 2, 1951: (1) worked for pay or profit or did unpaid work that contributed to the running of a farm or business operated by a member of the household; (2) had jobs but did not work because of illness, bad weather, vacation, industrial dispute, or temporary lay-off with definite instructions to return to work within 30 days of the time of being laid off; (3) were without jobs and were seeking work during the week. The latter category includes those who would have looked for work except that they were temporarily ill, were on indefinite or prolonged lay-off, or believed that no work was available.

The labour force does not include persons going to school, keeping house, permanently unable to work, retired or voluntarily idle, and those not otherwise classifiable. Persons working or with a job but not at work were asked to state the name and kind of business or industry in which they worked, as well as the occupation at which they worked. Those not working were asked to report the information for the firm or business where they last worked.

It should be pointed out that, although new workers (persons seeking their first job at the time of the Census) were, by definition, part of the labour force, they were regarded as having no industrial attachment and were not included in the figures. This group, numbering only 8,970 males and 4,502 females at the time of the 1951 Census, would vary in size from census to census depending upon economic conditions. Furthermore, while persons with jobs, with previous work experience and seeking work, etc., were classified at the 1951 Census according to the labour force concept, they were classified at the 1921, 1931 and 1941 Censuses according to the gainfully occupied concept. The differences arising from the inclusion or exclusion of certain segments of the population, depending upon the concept used to measure the working force, are not sufficiently significant to affect the comparability of data shown and, for the sake of convenience, the working population is referred to in subsequent paragraphs as the "labour force" irrespective of concept used at the time of the Census.

Final figures for Canada, excluding the Yukon and Northwest Territories, show that 4,130,802 males and 1,168,823 females, 14 years of age or over, or a total of 5,299,625 persons, were in the labour force during the week ended June 2, 1951. Of this number, 4,121,832 males and 1,164,321 females had jobs or had previous work experience and were seeking work during the week of June 2, 1951.

* Prepared in the Census Division, Dominion Bureau of Statistics.

Males represented 78 p.c. and females 22 p.c. of the total labour force. The population of the ten provinces consisted of 7,074,363 males and 6,909,966 females, or a total of 13,984,329 persons. The total labour force, therefore, accounted for 37·8 p.c. of the total population, males in the labour force representing 58·4 p.c. of the total male population and females 16·9 p.c. of the total female population. About 82 p.c. of the males and almost 24 p.c. of the females 14 years of age or over were in the labour force during the week ended June 2, 1951.

Relative Growth of Numbers of Males and Females in the Labour Force, 1921-51.—Table 2 shows that the percentage of the male population (including the Armed Forces in 1941) at working ages (14 years or over) in the labour force has been declining since 1921 while for females the percentage has increased steadily since that date. If males on Active Service at the 1941 Census date are excluded from the male labour force, the trend changes substantially. While a sharp drop in the percentage of the male population in the labour force then appears between 1931 and 1941, an almost corresponding increase occurs between 1941 and 1951. Males on Active Service on June 2, 1941, accounted for over 8 p.c. of the total male labour force at that time.

2.—Number and Percentage of the Population in the Labour Force, by Sex, Census Years 1921-51

(Exclusive of the Yukon and Northwest Territories)

Census Year	Labour Force Population ¹			Percentage of Total Population			Percentage of Population 14 Years or Over		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
	No.	No.	No.						
1921.....	2,675,290	489,058	3,164,348	59.2	11.5	36.1	86.7	17.2	53.4
1931.....	3,256,531	665,302	3,921,833	60.7	13.3	37.8	85.3	19.1	53.7
1941 (incl. Active Service).....	3,676,563	833,972	4,510,535	62.4	14.9	39.3	83.6	20.2	52.9
1941 (excl. Active Service).....	3,363,111	832,840	4,195,951	57.1	14.9	36.5	76.7	20.2	49.3
1951 (incl. N.F.I.d.) ² ..	4,121,832	1,164,321	5,286,153	58.3	16.9	37.8	82.2	23.6	53.1
1951 (excl. N.F.I.d.) ² ..	4,032,372	1,147,241	5,179,613	58.5	17.0	38.0	82.3	23.8	53.3

¹ The "gainfully occupied" rather than the "labour force" concept was used prior to 1951 (see text on p. 693). ² Excludes a few persons seeking work who have never been employed.

The decline in the proportion of males at working ages, as indicated in Table 3, is largely caused by the raising of the school-leaving age and, at the older ages, by earlier retirement. Only 14.1 p.c. of the males 14-15 years of age were in the labour force at the 1951 Census date. While the proportion of males 16-19 years of age in the labour force at the 1951 Census was considerably higher than in 1941, it was lower than in 1921 or 1931. The substantial increases during the 1941-51 decade in the proportions of males in age groups from 20 to 64 years were chiefly accounted for by the return of persons in the Armed Forces to civilian employment. The percentage of males in the oldest age group (65 years or over) in the labour force has continued to decline from about 58 p.c. in 1921 to less than 39 p.c. in 1951.

3.—Numbers and Percentages of the Population, 14 Years of Age or Over, in the Labour Force, by Age Group and Sex, Census Years 1921-51

¹ Includes a few persons of "Not stated" age. In 1921 such persons were included in the age group 35-64 years. In 1941 and 1951 there was no "Not stated" age group since all ages were assigned to specific groups.

² Includes Newfoundland.

Table 4 shows that the ratio of females to males in the labour force has increased each successive decade since 1921. Even the addition of persons on Active Service at the time of the 1941 Census to the civilian labour force at that date does not, except in the case of Nova Scotia, alter the continuous increase in these ratios. Although the ratio is highest in industrial Ontario and Quebec, the most significant increases during the decade 1941-51 have occurred in the four western provinces. In the 30-year period since 1921, the ratio of females to males in the labour force has more than doubled in British Columbia and almost doubled in Saskatchewan and Alberta. Newfoundland is not included in these comparisons since census figures for 1921, 1931 and 1941 are not available for that Province.

4.—Number of Females to Every 1,000 Males in the Labour Force, by Province, Census Years 1921-51

(Exclusive of the Yukon and Northwest Territories)

Occupational Trends, 1901-51.—The main obstacle in the way of a comparison of occupations by census years is the absence of a uniform scheme of classification at each census. Even if the classification had been the same, the revolutionary changes that have taken place in the nature of work performed in many occupations with the introduction of machine processes in production would make comparisons difficult. Thus, comparison can be made only for the broad occupational groups shown in Table 5. In this table, occupations for 1901, 1911, 1921, 1941 and 1951 have been rearranged to place them on a comparable basis with the 1931 classification, the 1911 figures, perhaps, being less comparable than those for other years. The main change in the 1931 grouping was the transfer of the "accountants" class from the professional service group to the clerical group.

The outstanding feature of Table 5, so far as the males are concerned, is the decline shown in the relative importance of agricultural occupations since 1901. In that year, just over 45 p.c. of all males in the labour force were engaged in agricultural occupations, as compared with 19.7 p.c. in 1951. The proportionate importance of fishing, hunting and trapping occupations as a group has fluctuated somewhat from decade to decade, manufacturing and mechanical occupations have continued to increase in relative importance, and the relative position of mining and quarrying occupations has remained almost constant since 1921. There has been a steady growth in the proportion of males in construction, transportation, trade and finance, service and clerical occupations. Labourers (other than those engaged in the primary industries) have alternately increased and decreased in relative importance during the decades from 1901 to 1951. This may be caused by differences in the quality of enumeration of occupations and by the tendency for recent immigrants at each census to be more commonly employed as labourers than the labour force population generally.

Table 5 shows that over 42 p.c. of all occupied females were in personal service occupations in 1901 as compared with only about 22 p.c. in 1951. Females occupied in clerical occupations increased from approximately 5 p.c. to over 27 p.c. in the same comparison. The proportion of females in most trade and finance occupations increased from census to census while the proportion in manufacturing and mechanical occupations showed an almost continuous decline since 1901. Although a change in the 1951 Census definition of the occupation "lodging housekeeper" tended to reduce the number of females so classified, the decline in proportion of females in personal service occupations since the 1941 Census was due chiefly to a substantial decrease in the number of household workers during the ten-year period.

5.—Percentage of the Labour Force, 14¹ Years of Age or Over, by Occupation Group and Sex, Census Years 1901-51

(Exclusive of the Yukon and Northwest Territories)

NOTE.—Occupations for 1901, 1911, 1921, 1941 and 1951 were rearranged on the basis of the 1931 classification, although some adjustment of the 1931 grouping was necessary. The principal changes made in the 1931 classification were the transfer of accountants from the "Professional" to the "Clerical" group, and of female labourers and packers and wrappers in manufacturing and trade from the groups "Labourers", and "Transportation", respectively, to "Manufacturing" and "Trade". Absolute figures from which these percentages were derived are given in the Statistical Summary of the Progress of Canada at the end of this volume (*see* Index).

¹ Ten years of age or over in 1901 and 1911.

² Exclusive of persons on Active Service on June 2, 1941.

³ Exclusive of a few persons seeking work who had never been employed.

⁴ Exclusive of Newfoundland.

⁵ Excludes all Indians.

⁶ Includes pulp mill employees.

⁷ Excludes Indians living on reserves.

⁸ Includes almost all mine and smelter employees except clerical workers.

⁹ Includes proof-readers, shippers, weighmen and postmen, classified elsewhere in other years. The addition of these persons to the 1931 figures would have added 18.0 p.c. to the number of males in this occupation group.

¹⁰ Excluding agricultural, fishing, logging and mining labourers.

¹¹ Includes "Not stated" group.

¹² Less than 0.05 p.c.

Occupations by Province, 1951.—From Tables 6 and 7 it will be seen that, for males, agricultural occupations were relatively most important in Canada as a whole and in each of the Maritime and Prairie Provinces, while in Newfoundland almost one-third of the males in the labour force were engaged in fishing, trapping and logging occupations. In Quebec, Ontario and British Columbia manufacturing and mechanical occupations gave employment to a larger proportion of males than any other occupation group.

Clerical and service occupations provided employment to approximately one-half of the female labour force in Canada at the time of the 1951 Census, ranging from 42.7 p.c. in the case of Quebec to 54.9 p.c. in Alberta. While in Newfoundland 33.0 and 17.4 p.c. of the female labour force was occupied in service and clerical occupations, respectively, corresponding figures for Ontario were in almost reverse order, that is 17.5 and 32.6 p.c., for these two occupation groups. The professional group, including teachers and nurses, and the commercial group, including sales clerks, also provided employment to an appreciable number of females in each province.

Selected Occupations, by Sex, 1951.—The principal occupations reported by males and females at the 1951 Census are shown in Table 8 which lists, in order of numerical importance, all occupations having 20,000 or more males and all occupations with 10,000 or more females. These occupations accounted for 69.5 p.c. of all males and 80.2 p.c. of all females in the labour force at that time. Changes in the order of the principal occupations since 1941 were more pronounced for female than for male workers. Stenographers and typists, office clerks and sales clerks increased substantially to become, in that order, the numerically most important occupation classes for females. As for males, the ten numerically most important occupations in 1941 were, except for slight changes in rank, also the ten principal occupations in 1951. Despite the similarity in the order of these occupations for males, however, substantial increases in the number of office clerks, truck drivers and carpenters and sharp decreases in the number of farmers and farm labourers were reported over the decade.

8.—Occupations with 20,000 or More Males and Occupations with 10,000 or More Females, 1951

Occupations by Age, 1951.—Table 9 shows that higher proportions of males under 25 years were employed in fishing, trapping and logging occupations, in clerical occupations, in protective and other service occupations, and in the labourers group than in other occupation groups. It is worth noting, on the other hand, that 46.5 p.c. of the males in proprietary and managerial occupations were 45 years of age or over, while about 50 p.c. of those in personal service occupations were over that age. The table also indicates that in each occupation group the average age for females was considerably lower than for males.

Occupations of Females, by Marital Status, 1941 and 1951.—The female labour force included 348,961 married women in 1951. The somewhat better than three-fold rise in the number of working wives was the most outstanding change in the labour force composition during the 1941-51 decade, the 229 p.c. jump dwarfing increases of 33.5 p.c. in the total number of married women and 40.0 p.c. in the total number of working women. Of the 1941 total of 2,336,485 married women, one out of every 21 was working; of the 1951 total of 3,119,824 married women, one in every 9 was gainfully employed.

Married women accounted for 243,019 or over 73 p.c. of the total increase in the female labour force in the decade. In 1941, about 13 p.c. of the working women were married as compared with 30.0 p.c. in 1951; the number of single women in the labour force, on the other hand, rose 9 p.c. in the ten-year interval and represented only 62.0 p.c. of all working women in 1951 as against 80.0 p.c. in 1941. The number of working widows increased 38.0 p.c. and divorced women, while accounting for a very small portion of the total female labour force, increased more than 200 p.c.

Owing to changes in definitions and the inclusion of Newfoundland in the 1951 Census, occupation group figures for 1951 and 1941 are not strictly comparable. However, for most groups, comparisons between the two census years reflect the approximate change. Increase in the number of working wives during the decade varied by occupation group from two to seven times the number employed in 1941.

In the ten-year period, the number of married women in proprietary and managerial occupations increased about four times, while the number in the professions increased over four times. The number in clerical occupations was over seven times the corresponding 1941 figure, in commercial occupations six times, in manufacturing occupations almost three times and in service occupations more than one and one-half times.

Subsection 2.—Current Labour Force Statistics*

During World War II it became increasingly apparent that up-to-date information on the size and characteristics of the labour supply was a necessity. Also, the possibility of disturbed economic conditions in the post-war period emphasized the need for a current and periodic analysis of the state of employment in Canada. To meet this need, a labour force survey on a sample basis was conducted in the autumn of 1945. Quarterly surveys were carried out from then until November 1952, when the survey was placed on a monthly basis. A multi-stage area sample

* Revised in the Special Surveys Division, Dominion Bureau of Statistics.

was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. The present sample includes about 30,000 households in over 100 different areas in Canada. These areas include the 28 cities having a population of 30,000 or over in 1941, in addition to some of the smaller urban places and various rural areas.

The estimates of the labour force are restricted to the civilian labour force, since net strength of the Armed Forces is obtainable directly from official sources. Inmates of institutions and Indians living on reserves are also excluded because they are not in the competitive labour market. Because of inaccessibility and high cost of enumeration, certain remote areas of the country have been excluded from the sample.

The labour force surveys provide a classification of persons 14 years of age or over on the basis of their activity during a specified week, which is, in each case, the week that precedes the beginning of the survey. Information on the part of the population not in the labour force is also collected. These non-workers are classified as keeping house, going to school, retired or voluntarily idle, too old or permanently unable to work.

The information gathered on the labour force is divided into two groups: (1) persons with jobs and (2) persons without jobs and seeking work. The estimates of persons with jobs are classified by region, sex, age, hours worked, occupation, industry and occupational status. Special estimates are given for women employed in domestic service and employed women by marital status. Included in the estimate of persons with jobs are those who worked during the survey week, as well as those temporarily absent from their jobs because of illness, vacation, bad weather, labour disputes or temporary layoffs. The estimates of persons without jobs and seeking work are classified by region, sex, age and number of months looking for work.

The estimates obtained from the labour force surveys are all subject to sampling error; the relative error tends to increase as the size of the estimate decreases. Accordingly, the reliability of the smaller estimates is less than that of the larger estimates. Estimates of less than 10,000 persons should not be used without careful reservation.

Data in Table 12 for June 1, 1946 to 1953, are compiled from the results of labour force surveys conducted in late May or early June of those years. The information for years prior to 1946 is taken from estimates based upon 1931 and 1941 Census data rearranged according to the definitional system used in the labour force surveys, the revised census benchmarks being linked with the June 1946 survey on the basis of monthly and annual employment and unemployment data.

The labour force sample survey for June 1951 used the same reference week as the 1951 Census of population. The same general labour force definitions were used in each and comparisons can be made in the data obtained. In general, the results obtained from the sample survey compared favourably with those obtained from the Census having due regard to the sampling variability mentioned above.

Differences did show up, however, owing largely to two factors. (1) There is a difference in coverage. Excluded from the sampling scheme but included in the Census are 117,000 inmates in institutions, 62,000 Indians on reserves, 71,000 persons in the Armed Forces, and 110,000 persons living in relatively inaccessible areas. This difference affects in some measure each labour force category. (2) Enumeration of the whole population presents problems not encountered in continuing sample surveys. The latter employs relatively few enumerators with the opportunity of reinstruction for successive surveys. Consequently, the current survey can probe more deeply to bring out the marginal elements of the labour force. In particular, the survey reported more family members as having done unpaid family work on a farm or in a business than were reported by the Census.

¹ Exclusive of persons in institutions, remote areas and Indian reserves.
² Includes Newfoundland.

³ Employers, 'own-account' and unpaid family workers.

Main Characteristics of the Canadian Labour Force, 1931-53.*—The civilian population 14 years of age or over (exclusive of persons in institutions) increased in the period June 1931 to June 1953 by about 2,742,000 persons or at the rate of about 125,000 persons a year. The strength of the Armed Forces rose very considerably from 5,000 in 1931 and 9,000 in mid-1939 to 779,000 at June 1944 but declined to 105,000 by June 1953. Consequently, the civilian non-institutional

* Newfoundland data have been subtracted from 1953 totals: thus all statements made in this analysis are on the basis of the nine other provinces.

population, which increased very little from June 1939 to June 1940, actually declined in size until, in mid-1943, it contained almost 238,000 fewer persons than in 1939. During 1944, there was a small increase in the civilian population (59,000) as the rate of increase of the Armed Forces levelled off. In 1945, 1946 and 1947 the civilian population increased markedly as a consequence of the rapid demobilization of the Forces.

In contrast, the civilian labour force maintained its strength notwithstanding large withdrawals to the Forces during the war years (June 1942 labour force being 102,000 greater than at June 1941 and that of June 1945 being 66,000 greater) mainly by recruiting replacements from among those who would normally be outside the labour force. The group classed as "not in the labour force" usually represents a fairly constant percentage of the population but during the war years this category reached a low point in 1943 (162,000 persons fewer than in 1939), increased by 74,000 between mid-1943 and mid-1944 and then moved sharply upward with the decline in wartime employment (the increase was: June 1944 to June 1945, 160,000; and June 1945 to June 1946, 382,000).

The number of civilian jobs increased considerably during the War as compared with pre-war experience (despite a decline in agricultural employment) reaching a wartime peak of 4,447,000 in June 1943 (372,000 greater than June 1939). After registering a decline to 4,411,000 during the readjustment period represented by June 1945, the number of jobs continued to increase in post-war years to the all-time high, for that month, of 5,186,000 in June 1953.

Section 3.—Employment, Payrolls and Hours*

For many years the Dominion Bureau of Statistics has made monthly surveys of employment in the major non-agricultural industries, exclusive of education, health, domestic and personal service, government administration, etc. The broad industrial divisions covered by the surveys are forestry (chiefly logging), mining, manufacturing, construction, transportation, storage and communications, public utilities, trade, finance, insurance and real estate, and certain services (chiefly hotels, restaurants, laundries and dry-cleaning plants). Early in 1941, the monthly inquiries were extended to cover the current earnings of those in recorded employment. Subsequently, a record of weekly payrolls and average wages and salaries was built up for 1939, 1940 and 1941. Since late in 1944, monthly data have also been collected on man-hours and hourly earnings. Inquiries into the sex distribution of the persons on the payrolls of reporting establishments were undertaken on a monthly basis commencing Feb. 1, 1946, replacing the annual and semi-annual surveys of immediately preceding years. Following the entry of Newfoundland into Confederation, the collection of employment and payrolls data was undertaken in that Province.

For practical reasons associated with costs of collection in time and money, the current inquiries[†] are limited to firms and branches ordinarily employing 15 or more persons. The restriction results in the inclusion of industrial samples of varying size in the monthly survey, the variation depending upon the organization of the industry in large or in small units; from the equally important geographical

* Prepared in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics.

† The methods used in preparing the current statistics of employment and payrolls and man-hours and hourly earnings are explained in the DBS monthly bulletins on these subjects.

aspect, however, much greater uniformity exists in the provincial coverage of total employees and, in all cases, the coverage is large. It is estimated that the almost 24,000 firms co-operating in 1952 employed approximately 83 p.c. of the total wage-earners and salaried employees in the industries surveyed.

From 1951, the monthly records of employment, payrolls and man-hours have been grouped according to the Canadian Standard Industrial Classification. More recently the employment and payrolls indexes were recalculated on 1949 averages as 100 p.c. The tables in this Section incorporate classification changes, and all indexes refer to 1949 = 100.

The employment and payrolls indexes published monthly reflect general economic conditions in the country as a whole and also in specific areas, since workers are taken on staff or released by firms in response to demand for their products. As in each successive year since 1947, industrial employment in Canada reached a new all-time high level during 1952. Sustained consumer demand for goods and services, augmented by heavy defence expenditures occasioned by the continuation of hostilities in Korea and by Canada's commitments under NATO, were reflected in the high volume of employment during 1952. Commencement of a number of long-term industrial developments, such as the aluminum undertaking in British Columbia and the Quebec-Labrador iron-ore project, also contributed to the increase in employment during the year. The working time lost in labour disputes in 1952 was considerably higher than in the previous year although the total number of these disputes declined slightly. Work stoppages in the British Columbia logging and lumbering industry as well as in textiles and clothing and in construction contributed to the increase of over 300 p.c. in the number of man-working days lost.

Employment.—There was a moderate increase in employment during 1952, with the average index for the composite of nine non-agricultural industries (1949 = 100) climbing to a new peak of 111·6. The figure for Oct. 1, at 116·4, was the highest ever reached. The rate of increase over 1951, 2·6 p.c., was considerably lower than the rate of upward movement between 1950 and 1951, reflecting the stabilization of employment at a higher level following the accelerating effect of the Korean hostilities on defence expenditures. Month-to-month movements of the employment index during 1952 followed the seasonal pattern with slightly decreased employment between Jan. 1 and May 1, rising steadily thereafter, except for fractional declines in November and December.

Gain in employment were recorded in all major industrial groups with the exception of forestry (chiefly logging) where there was a decrease of 10·6 p.c. from the 1951 level. In manufacturing as a whole, employment rose by 1·3 p.c. over the preceding year, the average increase in durable goods, at 3·9 p.c., outweighing a decline of 1·3 p.c. in the staffs of factories turning out non-durable commodities. Advances in employment over the previous year within the durable goods group were particularly notable in the aircraft and parts industry, where there was an increase of nearly 68 p.c., in shipbuilding and repairing which gained 33 p.c., and in transportation equipment manufacturing which rose by 18 p.c. Recessions in employment were, however, recorded in a number of durable goods industries including heating and cooking appliances, glass and glass products, wood products, saw and planing mills, and furniture. In the non-durable goods division declines in employment were largely concentrated in the textiles group (excluding clothing) and in rubber products.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY WAGES AND SALARIES, 1941-53 (COMPOSITES OF NINE NON-AGRICULTURAL INDUSTRIES) 1949 = 100

Industrially, employment in construction in 1952 showed the most marked gain of all groups for which data are available, with an increase of 8.5 p.c. over 1951. Excluding forestry, new all-time high records of employment were established in the major non-manufacturing industries, although the advances over 1951 in all groups with the exception of public utilities operation and services were less than the rate of increase revealed by a similar comparison between 1950 and 1951.

Employment gains for 1952 were indicated in each of the provinces and, although these advances were generally moderate, they resulted in record high levels being reached in most instances. Heightened post-war employment was particularly marked in Alberta where the increase over 1946 was 46.2 p.c.; in Ontario it was 29.0 p.c., in British Columbia 27.6 p.c., and in Quebec 25.4 p.c.

Employment indexes for the major industries are given in Table 13 and for the provinces in Table 14 by months for 1951 and 1952, with annual averages from 1939. Table 15 gives index numbers of employment in eight cities of Canada. Changes from the previous year were slight in each case, the most notable variation being an increase of 4 p.c. in the index for Montreal. Quebec, Toronto, Winnipeg and Ottawa-Hull also showed small increases over 1951, while the Vancouver index declined by 1.3 p.c. and those for Windsor and Hamilton receded fractionally from their 1951 peaks.

The percentages of women employed in the main industrial groups has remained fairly constant over the past few years. In 1952, women made up 21.8 p.c. of the industrial composite compared with 21.7 p.c. in 1951.

13.—Annual Average Index Numbers of Employment, by Industrial Group, 1939-52, and Monthly Indexes, 1951 and 1952

(Exclusive of Newfoundland and the Territories)

NOTE.—These indexes are calculated as at the first day of each month, on the base 1949=100.

¹ Proportion of employees reported in metropolitan areas to the total reported by all employers making returns in Canada at Dec. 1, 1952.

Earnings.—Disbursements in wages and salaries rose significantly in 1952 as a result both of increased employment and of widespread and substantial upward adjustments in rates of pay. Gains were general in all industries and areas covered and, at 140.3, the average payrolls index (1949=100) exceeded the previous year's record level by 11.7 p.c. The 1952 estimate of total Canadian labour income also showed an increase of 11 p.c. over 1951.*

Provincially, the largest percentage gains in the year were those of approximately 17 p.c. in Alberta and Prince Edward Island, more than 14 p.c. in Saskatchewan, and 13 p.c. in Quebec and British Columbia. Industrially, construction, which led the other major groups in employment gains over the preceding year, also showed the most notable advance in payroll disbursements, with an increase of 23.3 p.c. over 1951. Public utility operation showed a gain of 15.4 p.c. and an increase of 15.1 p.c. was recorded in mining. The smallest percentage gain over 1951 in payroll disbursements, amounting to 2.6 p.c., was in forestry (chiefly logging) where the average index of employment declined by 10.6 p.c. owing, in part, to the industrial dispute of woods workers in British Columbia during the summer of 1952. In manufacturing as a whole, the index of payrolls rose by 10.8 p.c. in 1952; the durable goods industries showed a gain of 14.3 p.c. and in the non-durable goods division, where employment declined slightly during the year, the amounts disbursed in payrolls increased by 7.3 p.c.

* Monthly estimates of total wages, salaries and supplementary labour income are given in DBS Bulletins, *Estimates of Labour Income*.

16.—Annual Index Numbers of Employment, Payrolls and Average Earnings in Industrial Establishments, with Average Weekly Wages and Salaries, 1951 and 1952.

¹ The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the non-durable goods group includes the remaining manufacturing industries. ² Mainly hotels, restaurants, laundries and dry-cleaning establishments. ³ Exclusive of Newfoundland and the Territories.

Table 17 shows the month-to-month movement of average weekly wages and salaries in 1951 and 1952, with annual averages from 1939. In each group for which data are available, new all-time high levels of per capita earnings were reached, with the composite of nine leading non-agricultural industries showing average weekly wages and salaries to be \$54.13 in 1952 as compared with \$49.61 in the preceding year. Widespread upward adjustments of wage rates were largely responsible for the higher per capita earnings, with industrial and occupational changes in the distribution of employees contributing to a lesser extent.

¹ Consists mainly of hotels, restaurants, laundries and dry-cleaning establishments.

Since 1944, a monthly series of statistics on man-hours, hourly earnings and weekly wages in industries where employers keep count of hours actually worked has been prepared by the Dominion Bureau of Statistics. In manufacturing, the proportion of total workers included in the monthly surveys on these subjects is high, amounting to approximately 80 p.c. of all wage-earners in Canada. Table 18 summarizes the recent data. In general, the trend towards a shorter working week continued during 1952, with many of the listed industries showing fractional reductions in average weekly hours worked. Construction was again an exception, with an increase in the average work week from 40.3 hours to 41.7 hours between 1951 and 1952. In all industries and areas for which statistics are available there have been successive increases in recent years in the averages of hourly earnings and weekly wages.

¹ The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the non-durable goods group includes the remaining manufacturing industries.

Section 4.—Earnings, Hours of Work and Wage Rates

Subsection 1.—Earnings and Hours of Work of Male and Female Employees in Manufacturing Establishments*

Information on earnings and hours of male and female wage-earners and salaried employees in manufacturing has been collected by the Dominion Bureau of Statistics for one week in the autumn of each year since 1946. The surveys cover manufacturing establishments usually employing 15 or more persons and include more than 85 p.c. of all employees in the industry. In addition to the general figures of employees, earnings and hours, distributions of wage-earners by hours worked in the survey week were obtained from 1946 to 1949 and, in 1950, a distribution of wage-earners and salaried employees by range of earnings.† In 1951, data for general office and clerical workers were segregated from those for managerial, professional and other salaried employees.

* Prepared in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics. More complete information is published in the DBS annual bulletins, *Earnings and Hours in Manufacturing*.

† See the 1952-53 Year Book, p. 701.

The surveys cover all full-time, part-time and casual employees on the paylists in the week, except homeworkers and employees absent without pay throughout the week. No data are included for proprietors or firm members, pensioners, or for employees in separately organized sales offices. The earnings comprise the gross remuneration for the week, including regularly paid bonuses and vacation pay, before deduction for taxes, insurance, pension plans, etc. Part-time, full-time and overtime hours worked and hours of paid absence are included.

The period since 1946, when the first survey was made, has been characterized by steadily rising earnings, reflecting upward pay adjustments and increasing cost-of-living bonuses. A more rapid expansion in employment activity in the higher-paid durable goods industries than in the non-durables has also contributed more recently to the upward movement of the general averages. The amounts and proportions of the increases reported for male and female wage-earners and salaried employees are given in Table 19. Reductions in working time, particularly between 1950 and 1951, resulted in generally smaller percentage increases in the weekly wages than in the hourly earnings of the wage-earners.

Tables 20 and 21 show geographical and industrial averages of hours and earnings for wage-earners and salaried employees in the week ended Oct. 31 in 1950 and 1951. Table 21 also gives statistics for office workers in October 1951 which show that 56.8 p.c. of the men and 96.6 p.c. of the women are classified as salaried personnel. Their hours differed insignificantly from those of managerial and professional staffs.

Variations in hours worked, as shown in these tables, are related to the length of the normal work week, which is regulated largely by local custom, union agreements and provincial legislation, and to the levels of industrial activity prevailing in the periods surveyed. The group averages are also influenced by the industrial and occupational distributions of the reported employees, the numbers of men and women, of casual and part-time workers, the duration of their employment in the week and the amounts of overtime worked and of time lost through absenteeism, labour turnover, etc. Women usually average fewer hours than men because their work-week tends to be shorter, part-time work and absenteeism are more prevalent, and above-average proportions are employed in industries where a short work-week is customary.

Disparities in levels of earnings are associated with pay differentials on an industrial and geographical basis, the type and size of the manufacturing operation, occupational differences, fluctuations in activity resulting from seasonal, market and other conditions, variations in the proportions of short-time, casual and part-time workers and in the amount of overtime work, and differences in the proportions of women employed. Area variations are closely related to the industrial distributions of the workers. Salary levels are further affected by the prevalence of head offices, the type and size of establishments, and varying requirements for highly paid professional and executive personnel.

The proportions of women included in the 1950 and 1951 surveys and the relationship of their wages and salaries to men's earnings are given in Table 22. Their earnings are generally lower than those of men, not only because of pay differentials and occupational differences, but also because their hours of work are frequently shorter, part-time work and absenteeism is more common than among men and they tend, on the average, to be younger and less experienced workers.

Subsection 2.—Wage Rates and Hours for Various Classes of Labour*

Statistics of rates of wages and hours of labour have been collected for many years by the Federal Department of Labour and are published monthly in the *Labour Gazette* and in annual reports supplementary to the *Labour Gazette*. The first report was issued in 1921 but the records begin, in many cases, with the year 1901. The index numbers show the general movement of wage rates for the main industrial groups as well as for individual industries, but these cannot be used to compare wage rates in one industry with those in another. The statistics are average straight-time wage rates or average straight-time piece-work earnings and do not include overtime or other premium payments.

Tables 23 and 24 show the index numbers of wage rates by main industrial groups and by industries. From 1930 to 1933, the trend in wage rates was downward but increases have been general each year since that time. During the period 1939-52, the rise in the general average index number amounted to 163.3 p.c.

* More detailed information is given in the Department of Labour publication, *Wage Rates and Hours of Labour in Canada*.

23.—Index Numbers of Wage Rates for certain Main Industrial Groups, 1943-52

(1939=100)

NOTE.—Figures back to 1901 may be obtained from the Department of Labour publication, *Wage Rates and Hours of Labour in Canada, 1951*. Figures for 1921-42 are given in the 1947 Year Book, p. 650.

Section 5.—Unemployment Insurance

The Unemployment Insurance Act, which came into operation on July 1, 1941, applies to all employed persons with the following exceptions: workers in specified industries or occupations such as agriculture, fishing, Armed Forces, permanent public service of the Federal Government, provincial governments and municipal authorities, private domestic service, private-duty nursing; certain director-officers of corporations; workers on other than hourly, daily or piece rates if earning more than \$4,800 per year and (except by consent of the Unemployment Insurance Commission) employees in a hospital or charitable institution not carried on for gain. All employees paid by the hour, day or on piece rate (including a mileage rate) are insured regardless of amount of earnings, together with all employees who receive \$4,800 or less per annum under weekly, monthly or yearly rates.

Unemployment Insurance Fund.—Employers and employees contribute to the Fund, the total paid by each group being equal. The Federal Government contributes an amount equal normally to one-fifth of the combined employer-employee contributions, reimburses the fund for certain types of supplementary benefit payments and assumes the cost of administration. From July 1, 1941, to Mar. 31, 1952, employers and employees contributed \$927,418,439 to the Fund and the Federal Government added \$187,318,241. Interest and profit on sale of securities amounted to \$96,667,148 and fines of \$109,541 made a total revenue of \$1,211,513,369.

Benefits first became payable on Jan. 27, 1942, and from that date to Mar. 31, 1952, total benefit payments amounted to \$433,314,017, leaving a balance of \$778,199,352 in the Fund. Reserves of the Fund are invested in Government of Canada bonds and, as at Mar. 31, 1952, the par value of bonds held amounted to \$767,611,500.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT

Earnings	Weekly Contributions ¹		Value of Weekly Stamp ²	Weekly Benefits ³	
	By Employee	By Employer		Single Person	Person With One or More Dependents

\$48.00 or more.....	54	54	108	17.10	24.00

¹ The daily rates of contribution in respect of each class is one-sixth of the weekly rates. ² Unemployment insurance stamps combine both employer and employee contributions. ³ Rates calculated on the average daily contribution for the last 180 days in the two years preceding claim. The daily rate of benefit is one-sixth of the weekly benefit rate.

No benefit is payable during the first five days of unemployment in a benefit year. After that time, the duration of benefit is related to the employment and contribution history of the employee, the number of days' benefit being equal to one-fifth the number of contribution days during the previous five years, less one-third the number of benefit days in the previous three years. Insurance benefit is paid as a right on fulfilment of the following statutory conditions:—

The payment of not less than 30 weekly (or 180 daily) contributions within two years, while in insured employment; and the payment of at least 60 daily contributions within the immediately preceding 12 months, or 45 daily contributions within the immediately preceding 6 months. (These periods of two years, 12 months and 6 months may be extended under certain circumstances.)

Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Supplementary benefits at a slightly lower rate are payable to certain classes whose benefits have been exhausted or who are not entitled to ordinary benefit during the period Jan. 1 to Apr. 15 in each year.

Statistics of Unemployment Insurance.*—Benefits under the Unemployment Insurance Act first became payable late in January 1942, but no applications for benefit were received until early in February. Except for unusual periods, such as the months following the cessation of hostilities in Europe in the spring of 1945, monthly totals of claims received have shown a definite seasonal variation, rising in the late autumn and winter and falling again in the spring. Monthly averages of initial and renewal claims filed have been as follows: 1947, 36,904; 1948, 54,091; 1949, 77,821; 1950, 88,165; and 1951, 95,130.

* Statistics of unemployment insurance are compiled and published by the Unemployment Insurance Section, Labour and Prices Division, Dominion Bureau of Statistics, from material supplied by the Unemployment Insurance Commission. A more detailed analysis of these data, by province and sex, is available in DBS publications, *Annual Report on Benefit Years Established and Terminated Under the Unemployment Insurance Act* and *The Monthly Statistical Report on the Operation of the Unemployment Insurance Act*.

Since September 1943, a record has also been maintained of the number of claimants on the live unemployment register on the last working day in each month. This provides a measure of recorded unemployment among insured persons on one day of each month. Monthly averages of ordinary claimants on the live register at the end of the month have been: 1947, 68,254; 1948, 88,909; 1949, 135,624; 1950, 165,304; and 1951, 138,807.

Monthly statistics on the operation of the Unemployment Insurance Act also provide data on the number of days that claimants on the live unemployment register at the end of each month have been continuously on the register, the number of claimants considered entitled and not entitled to benefit, chief reasons for non-entitlement, number of days benefit paid and amount of benefit paid.

In addition to the monthly material on the operation of the Act, annual tabulations are published of the persons employed in insurable employment and of benefit years established and benefit years terminated. The data on the insured population shown in Table 29 are obtained from returns from the renewal of insurance books and contribution cards at Apr. 1. Included are those contributing in insured employment at that time and those on claim.

The number of persons insured under the Unemployment Insurance Act, shown in Table 29, was assumed to be those working in insurable employment as at Apr. 1, as indicated at that time from returns on those receiving insurance books and contribution cards.

Table 30 presents information on the persons who established benefit years and those benefit years that terminated during the calendar year 1949. A benefit year is established under the Unemployment Insurance Act when an insured person, upon becoming unemployed, submits a claim and proves that at least 180 daily contributions have been made on his behalf during the preceding two years. Because of other provisions of the Act or because he may regain employment before he actually receives benefit, the setting up of a benefit year does not necessarily result in the receipt of benefit payments. When a benefit year is established it means merely that the claimant's right to receive benefit at a certain rate at any time during the succeeding twelve months is determined. Thus, of the 578,111 benefit years that terminated during 1950, 70,315 were paid no benefit.

The benefit year remains in existence either until the authorized benefit rights are exhausted or until 12 months have passed since the date of its establishment, whichever occurs first.

The amount of benefit paid on benefit years terminated, as presented in Table 30, is secured by multiplying each daily rate of benefit by the number of days paid at that rate on the ledger cards representing benefit years upon which benefit was drawn. Benefit years terminated during 1950 and benefit days paid on those benefit years are classified, in Table 31, by duration of benefit paid.

Table 32 classifies benefit years terminated by daily rate of benefit authorized. The daily rate of benefit is determined by the amount of the daily average contribution paid on behalf of the claimant during the most recent 180 contribution days and by whether or not he has a dependant within the meaning of the Act.

Table 33 shows benefit years terminated and benefit days paid on them by age of claimant; and benefit years terminated by cause of termination and age of claimant. Benefit years terminated during 1950 and benefit days paid on them are classified by industry and age in Table 34 and by occupation in Table 35.

29.—Persons Insured under the Unemployment Insurance Act, by Industrial Group and Sex, 1950 and 1951

NOTE.—These figures include only persons who exchanged an unemployment insurance book or were issued a book for the first time in April. They, therefore, represent an estimate of the number in insurable employment as at Apr. 1.

Employment Service.—The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint federal-provincial arrangement for more than two decades, were taken over on Aug. 1, 1941, and added to by the Commission in all provinces, except Quebec. The Commission also established offices in Quebec and the provincial government thereupon reduced the number of its own offices.

Section 6.—Vocational Training*

The Federal Department of Labour, in co-operation with the provincial governments, carries on the following types of training: (1) youth training; (2) assistance to students by way of bursaries; (3) apprenticeship; (4) training of unemployed persons; (5) assistance to the provinces for vocational schools; (6) training of military personnel; and (7) training of workers for defence industries.

The Vocational Training Advisory Council, appointed under authority of the Vocational Training Co-ordination Act, 1942, advises the Minister of Labour on the general aspects of training plans. The Council is representative of employers, organized labour, vocational education and of veterans' and women's organizations. In November 1952, an Advisory Committee on Apprenticeship Training was appointed to advise the Minister on special problems of apprenticeship and industrial training.

Youth Training.—This phase of the training program consists, for the most part, of various general and specialized courses for rural young people in agriculture, home crafts and handicrafts and other related subjects.

Federal Government allotments to the different provinces for this type of training for the year ended Mar. 31, 1952, together with claims paid, including commitments from previous years, to Apr. 30, 1952, were as follows:—

<i>Province</i>	<i>Allotment</i>	<i>Payment</i>	<i>Province</i>	<i>Allotment</i>	<i>Payment</i>
	\$	\$		\$	\$
Newfoundland.....	15,000	11,605	Manitoba.....	20,000	16,889
Prince Edward Island..	7,000	2,348	Saskatchewan.....	35,000	33,735
Nova Scotia.....	24,000	21,726	Alberta.....	40,000	31,019
New Brunswick.....	33,850	33,317	British Columbia.....	52,000	51,095
Quebec.....	155,000	124,446			
Ontario.....	60,000	60,000	TOTALS.....	441,850	386,180

Assistance to Students.—Under the Youth Training Division of the Vocational Training Agreement with each province, assistance may be provided for nurses-in-training at hospitals and for university students in courses leading to a degree who have good academic standing but who, without financial assistance, cannot continue training. At the discretion of the provincial authorities, assistance may be given in the form of a grant or loan, or a combination of the two.

The value of Federal Government assistance for such purposes may be assessed from the following approximate amounts paid to the provinces during the year ended Mar. 31, 1952:—

<i>Province</i>	<i>Amount</i>	<i>Province</i>	<i>Amount</i>
	\$		\$
Newfoundland.....	6,900	Manitoba.....	5,537
Prince Edward Island.....	2,348	Saskatchewan.....	19,654
Nova Scotia.....	7,203	Alberta.....	12,867
New Brunswick.....	11,967	British Columbia.....	29,866
Quebec.....	78,297		
Ontario.....	60,000	TOTAL.....	234,637

Financial help was given to 564 nurses-in-training and 2,819 students at universities. Included in the total number of university students were 862 taking courses in medicine, 97 in dentistry, 602 in applied science and engineering, 59 in agriculture and 803 in arts and science. Total federal payments in the past 13 years, amounting to \$2,318,457, have assisted 26,674 students.

* More detailed information is given in the Department of Labour publication, *Canadian Vocational Training Annual Report 1951-52*.

Apprenticeship Training.—Apprenticeship agreements are in effect with all provinces except Newfoundland, Prince Edward Island and Quebec. Of the trades designated under the provincial Acts, emphasis is being given to the building and construction trades. In some provinces, certain categories of apprentices are given full-time training of a practical as well as a technical nature for a period of one to three months each year. For other categories, part-time training is given either in afternoon or evening classes for about seven months of the year. Provision is made with employers for adequate supervision of apprentices working on the job by the appointment of instructor-supervisors who instruct full-time classes for six to eight months and supervise for the remaining part of the year. Use is also made of trade advisory committees. Costs are shared equally by the province concerned and the Federal Government. At Mar. 31, 1952, the total number of apprentices registered was 11,031 in the seven provinces having agreements with the Federal Government.

Federal Government allotments made for the year ended Mar. 31, 1952, and claims paid (including commitments from previous years) to Apr. 30, 1952, to the different provinces, were as follows:—

<i>Province</i>	<i>Allotment</i>	<i>Payment</i>	<i>Province</i>	<i>Allotment</i>	<i>Payment</i>
	\$	\$		\$	\$
Nova Scotia.....	40,000	23,368	Saskatchewan.....	45,000	40,234
New Brunswick....	40,000	23,475	Alberta.....	161,000	158,112
Ontario.....	200,000	197,781	British Columbia...	28,500	7,634
Manitoba.....	45,500	43,798	TOTALS.....	560,000	494,403

Training of Unemployed Persons.—The Canadian Vocational Training and Co-ordination Act provides for the training of unemployed persons in receipt of unemployment insurance benefits. An amendment passed in 1948 extends the provisions to include those not in receipt of unemployment insurance benefits. The schedule covering the training of unemployed persons was accepted by all provinces, but training has not been carried out in Newfoundland, Prince Edward Island, Quebec or Ontario, the need for it not having arisen. Approved costs are shared equally by the province concerned and the Federal Government, the province recommending to the Federal Minister of Labour the scale of training allowances that should be paid.

In the year ended Mar. 31, 1952, approximately 133,489 days' training was given to 1,191 individuals, nearly all of whom were in Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta. At the end of that year, 583 were under training. The largest enrolment was in classes for nurses' aides. No training under this schedule was given for the designated apprentice trades.

Federal Government allotments to the different provinces for this type of training for the year ended Mar. 31, 1952, together with claims paid (including commitments from previous years) to Apr. 30, 1952, were as follows:—

<i>Province</i>	<i>Allotment</i>	<i>Payment</i>	<i>Province</i>	<i>Allotment</i>	<i>Payment</i>
	\$	\$		\$	\$
Nova Scotia.....	100,000	82,244	Saskatchewan.....	31,000	30,017
New Brunswick....	38,000	36,699	Alberta.....	60,000	50,060
Quebec.....	14,000	13,503	British Columbia...	10,000	7,608
Manitoba.....	25,000	16,749	TOTALS.....	278,000	236,881

Assistance for Vocational Schools.—A ten-year agreement for vocational school assistance was signed in 1945 by nine provinces and, in 1950, an agreement was made with Newfoundland. The following payments are made by the Federal Government:—

- (1) An annual grant of \$10,000 to each province;
- (2) an annual allotment of \$1,965,800 distributed among the ten provinces in accordance with the number of young persons in each province in the age-group 15-19 years;
- (3) a special allotment of \$10,292,250 to be used for capital expenditure for building and equipment and to be distributed among the provinces on the same basis as the annual allotment. Allotments provided for Newfoundland amount to \$65,800 for annual operation and \$292,250 for capital expenditure.

All federal allotments, except the annual grant under item (1), must be matched by an expenditure of equal amount by the provincial government concerned.

The assistance given by this agreement has resulted in marked expansion of vocational training across the country. Federal approval has been given to 120 vocational building projects consisting of new schools or vocational additions to existing schools. Of these, 98 were completed by Mar. 31, 1952, and 8 were under construction. Provision has been made for young people in rural areas of facilities for training in homemaking and related subjects, vocational agriculture and farm mechanics. Since the beginning of the agreement, total federal payments under the annual allotment have amounted to approximately \$12,790,788 and capital payments for buildings and equipment to about \$8,090,027. Federal annual and capital allotments to each province, together with the amount of claims paid during the year ended Mar. 31, 1952, were as follows:—

Province	Annual Allotment		Special Capital Allotment (Building and Equipment)	
	Allotment ¹	Payment	Allotment	Payment
	\$	\$	\$	\$
Newfoundland.....	65,800	49,228	292,250	—
Prince Edward Island.....	25,700	25,990	82,000	6,403
Nova Scotia.....	106,400	172,263	504,300	21,944
New Brunswick.....	92,700	92,700	433,000	60,234

British Columbia.....	123,800	195,420	595,400	1,316
TOTALS.....	2,065,800	2,308,299	10,292,250	857,514

¹ Includes unmatched grant of \$10,000 to each province.

Training of Military Personnel.—Provision is made for the training of service tradesmen in such categories as might be requested by the Department of National Defence and for whom the provincial governments have the necessary training facilities. Training during 1951-52 was on a comparatively small scale, with an enrolment of 649 trainees in the Provinces of New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan and Alberta. The greater part of the training was given to driver-mechanics, motor-vehicle mechanics and electrical mechanics

for the Army. The cost of this type of training is paid solely by the Federal Government. Allotments made for the year ended Mar. 31, 1952, and claims paid (including commitments from previous years) to Apr. 30, 1952, were as follows:—

<u>Province</u>	<u>Allotment</u>	<u>Payment</u>
	\$	\$
New Brunswick—ARMY.....	16,000	12,129
Quebec—ARMY.....	15,000	12,719
Ontario—AIR FORCE.....	6,000	5,586
Manitoba—ARMY.....	17,000	15,902
Saskatchewan—ARMY.....	328	366 ¹
Alberta—ARMY.....	55,000	46,804
TOTALS.....	109,328	93,506

¹ Includes \$48 given for training prior to this fiscal year.

Training of Workers for Defence Industries.—Under an Order in Council dated June 15, 1951, agreements have been entered into with the provinces of British Columbia, Alberta, Ontario, Quebec, New Brunswick and Nova Scotia under which special classes for the training of workers in defence industries have been established. Such classes have been organized in aircraft sheet-metal work, machine shop practice and machine tool operations, welding and drafting. Industrial establishments are being encouraged to organize and operate plant-training programs and special pre-employment classes may be set up to meet any general need that may develop. Federal Government allotments and payments made for the year ended Mar. 31, 1952, were as follows:—

<u>Province</u>	<u>Allotment</u>	<u>Payment</u>

Section 7.—Industrial Accidents and Workmen's Compensation

Subsection 1.—Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, departmental correspondents and from press reports.

Causes of Industrial Fatalities.—Preliminary figures indicate that, during 1952, 391 fatal accidents to gainfully employed persons were the result of these persons being struck by tools, machinery, moving vehicles and other objects; within this group 70 deaths were caused by falling trees and branches, 46 by objects falling in mines and quarries and 42 by automobiles and trucks. Collisions, derailments, wrecks, etc., were responsible for 338 deaths; automobiles or trucks were involved in 142 of these cases, water craft in 64, tractors or loadmobiles in 51, steam railways in 43, and aircraft in 29. Falls to different levels caused 115 deaths including 78 resulting from falls into rivers, lakes, sea or harbours. Deaths of 32 workers were caused by falls from scaffolds and stagings, 27 by falls from buildings, roofs and towers and 20 by falls from ladders and stairs. Workers who died as a result of exposure to or contact with electricity numbered 60.

Subsection 2.—Workmen's Compensation*

In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for fewer than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation, each Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board, and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the accident occurs. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act, 1946.

* More detailed information is given in the Department of Labour publication, *Workmen's Compensation in Canada, A Comparison of Provincial Laws*.

In all provinces, free medical aid is given to workmen during disability. Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus, and silicosis is compensated under certain conditions. Other diseases compensated vary according to the industries of the provinces.

Scope of the Workmen's Compensation Acts.—The Acts vary in scope but, in general, they cover construction, mining, manufacturing, lumbering, fishing, transportation and communications and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia.

Benefits.—Under each Act, except those of Saskatchewan and Alberta, if a workman is disabled from earning full wages for fewer than a stated number of days, usually called the "waiting period", he cannot recover compensation for the period of his disability or, in Manitoba and British Columbia, for the first three days of his disability. Where the disability continues beyond the required number of days, compensation is payable from the date of the accident. Medical aid is always paid from the date of the accident. In Saskatchewan and Alberta, the waiting period is one day, that is, compensation is not payable when the workman is off work only for the day on which the accident occurs. When he is disabled for any longer time, compensation begins from the day following the accident. Compensation in fatal cases is paid as follows:—

Burial expenses: \$250 in Saskatchewan and British Columbia, \$200 in Newfoundland, Nova Scotia, New Brunswick, Ontario, Manitoba and Alberta, \$175 in Quebec, and \$150 in Prince Edward Island. In seven provinces a further sum is allowed for transporting the workman's body.

To a widow or invalid widower (or to a foster mother as long as the children are under the age limit): a monthly payment of \$75 in Ontario and British Columbia, \$60 in Saskatchewan, \$50 in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba and Alberta, and of \$45 in Quebec. In addition, a lump sum of \$200 is paid in Ontario and of \$100 in all other provinces.

For each child in the care of a parent or foster mother receiving compensation: a monthly payment of \$25 in Ontario, Saskatchewan and Alberta, \$20 in Nova Scotia, Manitoba and British Columbia, \$12.50 in Prince Edward Island, \$12 in Newfoundland and New Brunswick, and \$10 in Quebec.

For each orphan child: a monthly payment of \$35 in Ontario, \$30 in Nova Scotia, Manitoba, Saskatchewan and British Columbia, \$25 in Prince Edward Island, New Brunswick and Alberta (in Alberta, a further amount, not exceeding \$10 a month, may be given at the discretion of the Board), \$20 in Newfoundland, and \$15 in Quebec, with a maximum of \$100 a month to any one family in Prince Edward Island and of \$120 in Nova Scotia.

Except in the case of invalids, payments to children are not continued beyond the age of 16 years in seven provinces but the Board has discretion to pay compensation to the age of 18 years if it is considered desirable to continue a child's education. In Quebec, the age limit is 18 years and in New Brunswick and British Columbia, compensation is paid to the age of 18 years if a child is regularly attending school. In New Brunswick, Ontario, Manitoba, Saskatchewan and British Columbia, payments to invalid children are continued until recovery, while the other provinces make payments only for the length of time the Board considers that the workman would have contributed to their support.

Where the only dependants are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly amount to be paid to all such dependants is limited to \$100 in Ontario, \$85 in Alberta, \$75 in British Columbia, \$60 in Nova Scotia and Manitoba, and \$45 in Prince Edward Island. In British Columbia, if a workman leaves dependent parents as well as a widow or orphans, the maximum payable to a parent or parents is \$75 a month. Compensation to dependants other than consort or children is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Alberta and British Columbia, each Act places a maximum on the total amount of benefits payable to all dependants in case of the death of the workman. In Newfoundland, Nova Scotia and New Brunswick, the maximum is two-thirds of the workman's earnings, in Quebec and Manitoba 70 p.c., and in Prince Edward Island 75 p.c. In Ontario and Saskatchewan, the average earnings are the maximum amount payable.

Irrespective of the workman's earnings, however, compensation may not fall below certain minimum monthly amounts. The minimum payable to a consort and one child in Quebec is \$55 a month or \$65 if there is more than one child; in Manitoba, the minimum is \$70 if there is a consort and one child and \$90 if there is more than one child; in Saskatchewan, the minimum is \$85 a month to a consort and child and \$100 if there are more children. In Newfoundland, a widow must receive at least \$50 a month with a further payment of \$12 for each child under 16 years of age unless the total exceeds \$100. In Ontario, the minimum payable to a widow is \$75 a month with a further payment of \$25 for each child, up to but not exceeding \$150 a month.

Compensation for total disablement in Newfoundland, Nova Scotia and New Brunswick is a periodical payment for the duration of the disability equal to $66\frac{2}{3}$ p.c. of average earnings; in Quebec, Manitoba and British Columbia, the rate is 70 p.c. of earnings; and in Prince Edward Island, Ontario, Saskatchewan and Alberta, 75 p.c. Except in New Brunswick, the Acts fix minimum sums to be paid for a permanent total disability. The minimum is \$15 a week in Prince Edward Island, Quebec, Manitoba and British Columbia, \$20 in Saskatchewan, and \$25 in Alberta. In Newfoundland, the minimum is \$65 a month, in Nova Scotia, \$85 a month, and in Ontario, \$100 a month. If, however, average earnings are less than these minima, the amount of the earnings is paid in all provinces except Nova Scotia and Saskatchewan. For partial disablement, compensation in most provinces is a percentage of the difference in earnings before and after the accident, the percentage rate being the same as in total disablement. In New Brunswick and Alberta, the amount is determined by the Board according to the diminution of earning capacity. In all provinces except British Columbia, if the impairment of earning capacity is 10 p.c. or less, a lump sum may be given.

The average earnings on which compensation is based are limited to \$4,000 a year in Ontario and Saskatchewan, \$3,600 in British Columbia, \$3,000 in Newfoundland, Nova Scotia, New Brunswick, Quebec, Manitoba and Alberta, and \$2,500 in

Prince Edward Island. If the workman's earnings at the time of the accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid workmen under 21 years of age may be raised later, if it appears that their earning power would have increased had the injury not occurred. Workmen's compensation statistics for the different provinces are not on a comparable basis and are thus presented separately in Tables 38 to 46.

Operations of the Newfoundland Workmen's Compensation Board.—

The Workmen's Compensation Board of Newfoundland commenced operations on Apr. 1, 1951. During the period Apr. 1 to Dec. 31, 1951, \$188,603 was paid for compensation with an estimated \$370,219 required for outstanding claims; the total compensation for the first nine months, paid and outstanding, was therefore \$558,822. The amount paid for medical aid was \$70,869 and it was estimated that the same amount would be required to complete payment for medical aid claims, making a total of \$141,738. The number of claims reported was 6,228.

During 1952, payments for compensation other than pensions amounted to \$355,689 and for medical service, \$112,301. It was estimated that an additional \$1,126,037 would be required for the payment of outstanding claims in these two categories. The number of claims reported and compensated in 1952 was 8,766.

Section 8.—Workers Affected by Collective Agreements

Statistics on the number of workers affected by collective agreements in Canada are compiled by the Department of Labour. Table 47 gives figures for the principal industrial groups. The second column shows the number of workers affected by agreements extended under the Quebec Collective Agreement Act (*see* Sect. 1, ss. 2, p. 689). Any duplication of the numbers of workers covered by agreements under this Act and by other agreements is eliminated in the third column. A more detailed table and studies of agreements in certain industries are available from the Department of Labour, Ottawa.

Section 9.—Organized Labour in Canada*

At the beginning of 1953 there were 1,219,714 labour union members in Canada, an increase of 6.4 p.c. over the figure for the previous year. The majority of the unions in Canada are affiliated with a central labour congress and their membership is listed in Table 50. In addition, each of the three largest congresses is discussed below.

Trades and Labor Congress of Canada.—The Trades and Labor Congress of Canada is the oldest of the central labour organizations in Canada. After the disbanding of the Canadian Labour Union, which had drawn together local unions in Ontario from 1873 to 1877, inclusive, there was no central organization until 1883, when the Trades and Labour Council of Toronto called a conference of local unions and plans were made to establish a national organization which was formally set up in 1886.

Affiliated with the Trades and Labor Congress of Canada at the present time are “international” trade unions, almost all of which are also affiliated with the American Federation of Labour, a number of Canadian or “national” unions and a number of directly chartered labour unions.

Canadian Congress of Labour.—This Congress was organized in September, 1940, when the All-Canadian Congress of Labour, formed in 1927, amended its constitution to permit the affiliation with the Congress of the Canadian branches of those international unions which, in the United States, are affiliated with the Congress of Industrial Organization. The Canadian Congress includes among its members a number of unions to which it has granted charters.

Canadian and Catholic Confederation of Labour.—National Catholic unions in Canada date from 1901. In 1921, these local Catholic syndicates, grouped as far as possible into federations according to industry, formed a central organization, the Canadian and Catholic Confederation of Labour.

* Information concerning unions is published in the Department of Labour annual publication, *Labour Organization in Canada*.

Section 10.—Strikes and Lockouts*

Since the end of World War II, increased wages and related demands have constituted the central issue in the majority of stoppages. Although the cost-of-living index, which had reached an all-time high at Jan. 1, 1952, commenced levelling off and was lower by the end of the year, the time lost in disputes over wage increases was greater than in 1951. In 1952, this issue was responsible for 64 p.c. of the stoppages, involved 86 p.c. of the workers and caused 94 p.c. of the total idleness, compared with an average for the six-year period, 1946-51, of 57 p.c. of the stoppages, 69 p.c. of the workers and 86 p.c. of the total loss. In 1952, causes affecting working conditions accounted for under 12 p.c. of the total stoppages; union questions, other than for increased wages, caused under 13 p.c. of the total; and discharge of workers, suspensions, refusal to reinstate and employment of particular persons, other than in connection with union questions, were responsible for about 11 p.c. of the total stoppages. Sympathy strikes have been few in number since 1948 and, in 1952, there was only one small stoppage for that reason. Pension plans were among the issues in five stoppages in 1952.

Settlement of 76 of the 222 stoppages in 1952 was brought about by direct negotiations; provincial conciliation affected settlement in 57 cases; civic mediation in two cases; 14 were referred to labour boards, commissioners and umpires; eight were settled by arbitration; 36 by return of workers and replacement, the latter being a factor in eight cases; and 22 were indefinite in result.

* A complete review of strikes and lockouts during 1951 will be found in a supplement to the *Labour Gazette* for April 1952, and for the year 1952 in a special Department of Labour report.

Section 11.—Canada and the International Labour Organization

The Department of Labour is the officially designated liaison agency between the Canadian Government and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization at its 29th Session held at Montreal, Que., Oct. 2, 1946, and by the United Nations General Assembly on Dec. 14, 1946, the Organization became a specialized agency of the United Nations although retaining its autonomy.

The Organization is an association of 66 nations, financed by their governments and controlled by representatives of those governments and of their organized employers and workers and comprises: (1) the General Conference of representatives of the Member States; (2) the International Labour Office; and (3) the Governing Body. Its structure and field of activity has been extended considerably since 1945 by the establishment of eight tripartite committees to deal with problems of major world industries, by triennial Regional Conferences and other Special Conferences, and by the technical assistance program to aid the development of backward countries.

The Conference meets at least once a year and is composed of four delegates from each Member State—two representing the government, one representing the employers and one representing the workers. These are accompanied by technical advisers for the various items on the agenda. The principal function of the Annual Conferences is the formulation of international standards concerning working and living conditions, in the form of Conventions and Recommendations. A Convention is adopted by a two-thirds majority of delegates at the Conference and must be considered by the competent authorities in each Member State with a view to possible ratification; however, each Member State decides for itself whether or not to ratify any Convention, and only by ratification does it assume the obligation to bring its legislation in that field up to the standard set by the Convention. In Canada, the provincial legislatures are the competent authorities with jurisdiction over the subject matter of most of the ILO Conventions and Recommendations. A Recommendation is adopted by a two-thirds majority vote of Conference delegates; it contains general principles for the guidance of national governments in drafting legislation or in issuing administrative orders and is not subject to ratification by Member States.

The International Labour Office acts as the permanent secretariat of the Organization and as an information centre and publishing house with respect to all questions on industry and labour. In the operational field, it assists Member States by furnishing experts on manpower and technical assistance. The ILO maintains a Canadian branch office at 95 Rideau Street, Ottawa.

The Governing Body of the ILO consists of 32 members—16 government representatives, eight employer representatives and eight worker representatives. Of the government seats, each of the eight States of chief industrial importance (of which Canada is one) holds a permanent place, while the other eight government representatives are elected triennially by the Conference; the worker and employer members also are elected every three years at the Conference by their groups.

In addition, there are eight government, eight worker and eight employer deputy-members elected for three-year terms. The Governing Body meets three times a year and has general supervision of the work of the Office and the various committees and commissions of the Organization, in addition to framing the budget and drafting the agenda of the annual conferences. Canada's representative on the Governing Body is Dr. Arthur MacNamara, former Deputy Minister of Labour for Canada.

There have been 35 sessions of the International Labour Conference, at which 103 Conventions and 95 Recommendations have been adopted covering a wide range of subjects, such as industrial relations, freedom of association, hours of work, weekly rest, holidays with pay, minimum wages, night work of women and young persons, industrial health and safety, workmen's compensation, conditions of work for seamen and dockers, unemployment and health insurance, protection of migrant workers and many other aspects of industrial and social problems. Up to March 1953, the ratifications of the Conventions by Member States totalled about 1,350 and the Recommendations have served as valuable guides to national programs of industrial and social advancement.

During 1952, in addition to the 35th Annual Conference, the following ILO meetings were held: three sessions of the Governing Body; sessions of the Metal Trades Industrial Committee, the Iron and Steel Industrial Committee, the Chemical Industrial Committee, and the Petroleum Industrial Committee; the Fifth Regional Conference of American States Members; the Inter-American Social Security Conference; the Latin-American Manpower Technical Conference; meetings of the Advisory Committee on Salaried Employees and Professional Workers, the Committee of Experts on Application of Conventions and Recommendations, the Joint Maritime Commission, the Joint ILO/WHO Committee on Occupational Health, the Asian Advisory Committee, the Committee of Experts on Productivity, and the Committee of Experts on Prevention and Suppression of Dust in Mining, Tunnelling and Quarrying.

The following ILO meetings were scheduled for 1953: the 36th Annual Conference; three sessions of the Governing Body; sessions of the Textiles Industrial Committee, the Building, Civil Engineering and Public Works Industrial Committee, and the Coal Mines Industrial Committee; an Asian Regional Conference; a Preliminary Conference of Statistical Experts; and meetings of the Committee on Plantations, the UN/ILO Committee on Forced Labour, the Permanent Agricultural Committee, the Committee of Experts on Systems of Payment by Results in the Construction Industry, the Joint ILO/WHO Committee on the Hygiene of Seafarers, and the Committee of Experts on the Application of Conventions and Recommendations.

Canada is represented at most of these ILO meetings and accounts of the discussions and decisions are published in the *Labour Gazette* from time to time.

Canada has ratified 18 of the ILO Conventions, 12 of which concern maritime and dock labour. The Department of Labour, as the official liaison agency with the International Labour Organization, is responsible for forwarding to the Office annual reports on ratified Conventions as well as periodical reports on many other industrial and social matters. The Department also keeps provincial governments and employer and worker organizations informed of ILO activities. In these and other ways, Canada continues to fulfil its obligations as one of the leading industrial Member States of the International Labour Organization.

CHAPTER XVIII.—CAPITAL EXPENDITURES AND CONSTRUCTION

CONSPECTUS

	PAGE		PAGE
SECTION 1. CAPITAL EXPENDITURES ON CONSTRUCTION AND ON MACHINERY AND EQUIPMENT.....	753	Subsection 2. Contracts Awarded and Building Permits Issued.....	769
SECTION 2. STATISTICS OF THE CONSTRU- TION INDUSTRY.....	761	Subsection 3. Government Aid to House- Building.....	773
Subsection 1. Construction in Canada..	761	Subsection 4. Construction of Dwelling Units.....	779

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment along with summaries of other available statistics on the construction industry. Section 1 describes the purpose of capital expenditures and shows the amounts spent by each of the various industrial or economic sectors.* Section 2 brings together a number of summaries of related series on construction activity: value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed; contracts awarded and building permits issued; Government aid to house-building; and construction of dwelling units.

Section 1.—Capital Expenditures on Construction and on Machinery and Equipment

Capital expenditures are those outlays made to augment and to replace the nation's stock of physical capital. This stock of capital is represented by such things as factory buildings, mines, stores, theatres, railways, telephone lines, power installations and the machinery and equipment used therewith to enable the workers to produce with greater efficiency an increasing volume of goods and services. Included also in the stock of capital are government-owned assets of a physical nature, such as roads, canals and office buildings, and all houses whether rented or owner-occupied. Excluded from capital expenditures are outlays for the accumulation of inventories and for the acquisition of land.

Capital assets are designed to last and assist in providing goods and services over a period of years; some types of assets, such as motors, may have a useful life of a very few years while others, such as buildings or power installations, may continue in profitable use for fifty years or more. The creation of these capital goods involves the diversion of resources from producing such items as food and clothing that give immediate satisfaction to the production of capital goods, which

* See also the Introduction to this Volume under "The Canadian Economy in 1953". Information is given in greater detail in the Department of Trade and Commerce Annual Report, *Private and Public Investment in Canada*.

will produce only items for the satisfaction of consumers over a period of future years. Thus, the extent of investment spending in the nation reflects the extent to which the nation is providing for the future, or is becoming industrialized; it also reflects the opinion of businessmen as to future prospects and of governments as to future demands for their services. It will be noted from Table 1 that since 1926 there have been two periods when capital spending accounted for a substantial portion of gross national product.

1.—Capital Expenditures in Canada, 1926-53

Year	Capital Expenditures	P.C. of Gross National Product	Year	Capital Expenditures	P.C. of Gross National Product
	\$'000,000			\$'000,000	
1926.....	917	17.3	1940.....	1,048	15.3
1927.....	1,087	19.2	1941.....	1,463	17.2
1928.....	1,296	21.2	1942.....	1,542	14.6
1929.....	1,518	24.6	1943.....	1,485	13.3
1930.....	1,287	23.2	1944.....	1,309	11.0
1931.....	881	19.3	1945.....	1,284	10.8
1932.....	491	13.0	1946.....	1,703	14.2
1933.....	327	9.2	1947.....	2,489	18.1
1934.....	416	10.3	1948.....	3,175	20.3
1935.....	505	11.6	1949.....	3,502	21.3
1936.....	590	12.6	1950.....	3,815	21.2
1937.....	828	15.5	1951.....	4,577	21.3
1938.....	773	14.8	1952.....	5,122	22.3
1939.....	765	13.4	1953.....	5,564	23.4

In the period from 1926 to 1930, investment accounted, on the average, for 21 p.c. of gross national product; in the period from 1947 to 1953, the average was also 21 p.c. However, in the latter period a high level of investment spending was maintained over a longer period with investment exceeding 20 p.c. of gross national product in six of the seven years while in the earlier period 20 p.c. was only exceeded in three of the five years considered. In the latter period, too, investment was at a much higher level than during 1926-30. Expenditures in 1953 were, in dollar terms, over three and one-half times those of 1929. Even if allowance is made for doubling of prices between the two years, the volume of investment was still about two-thirds greater. In addition to its significance to the long-run industrialization of the country, investment spending is very important in the year in which it is made in giving employment and income to those providing capital facilities.

Tables 2 to 6 give statistics of capital, repair and maintenance expenditures for the years 1951-53.

2.—Summary of Capital Expenditures and Repair and Maintenance Expenditures, By Sector, 1951-53

NOTE.—Actual expenditures 1951, preliminary actual 1952, intentions 1953.

Section 2.—Statistics of the Construction Industry

Subsection 1.—Construction in Canada

In collecting statistics for the capital expenditures surveys for 1951 a new method was used. Previous to that year, the capital expenditures surveys, which provide basic information on private and public investment in Canada, asked only for total expenditures on construction and machinery and equipment. For 1951, a classification of construction totals by type of structure was secured and this method proved so successful that the same procedure was followed in the 1953 capital expenditures forecast surveys which collect preliminary data for 1952 along with the 1953 forecast. Thus, early in 1953, estimates of construction by type of structure were available for 1951, 1952 and 1953. The other principal statistics of the construction industry—cost of materials used, numbers employed, and salaries and wages paid—are derived from ratios of these items to value of work performed. The ratios are established from sample surveys of contractors and owner-builders.*

The summary statistics given in the following tables are not comparable with those published in earlier Year Books, the basic difference being that the earlier figures were based largely on reports from construction contractors while the current data were reported by the various industries or sectors of the economy actually paying for the work done by contractors as well as construction work done by the labour force of the particular industries. In the latter instance, all expenditures which constituted part of the total capital cost of a structure, such as architect's fees, legal fees, etc., are included. Such items would not, as a rule, be included in figures reported by construction contractors. In addition, the coverage of the capital expenditure surveys is more comprehensive.

Tables 7 to 11 provide data on capital and repair and maintenance expenditures on construction and machinery and equipment in all sectors of the Canadian economy for 1951, 1952 and 1953. All data are classified according to the Standard Industrial Classification. The 1953 construction statistics given in these capital expenditures tables do not agree exactly with those given in Section 2 of this Chapter. The capital expenditures estimates of construction outlay are more up-to-date, having been based on revised forecast estimates released in July 1953, while the Construction series for 1953 are based on the original forecast estimates released in March 1953. However, the differences between the two estimates are of relatively minor importance.

The total value of the intended construction program in Canada for 1953, both new and repair, is estimated at \$4,359,000,000. This estimate covers all sectors of the Canadian economy—business, institutions, governments and housing. Although the 1953 estimate is about 7 p.c. above 1952, it is the smallest increase since 1946 in terms of both value and volume. Thus, the program for 1953 would not be expected to have the same impact on the expanded capacity of the construction industry as have those for some of the other post-war years, particularly 1946,

* Detailed figures resulting from these surveys are published in DBS annual report, *Construction in Canada*.

1947 and 1948. Evidence of this appears in the keener competitive bidding of recent years and in the easier supply situation currently in existence with regard to both labour and materials.

Year	Total New and Repair Construction	P.C. Increase Over Previous Year in—		Year	Total New and Repair Construction	P.C. Increase Over Previous Year in—	
		Value	Volume			Value	Volume
	\$'000,000				\$'000,000		
1946.....	1,607	33.4	11.2	1950.....	3,132	9.7	4.2
1947.....	2,016	25.5	12.4	1951.....	3,661	16.9	5.5
1948.....	2,571	27.5	13.1	1952.....	4,088	11.7	6.2
1949.....	2,856	11.1	5.7	1953.....	4,359	6.6	3.9

Construction trends in recent years in constant as well as current dollars are also of interest. These are presented in Table 7 for new and repair and total construction, along with total construction as a percentage of gross national product. The constant dollar figures, which offer a rough measure of construction volume, indicate that the expected total volume of construction in 1953, both new and repair, is nearly 63 p.c. greater than in 1946. This compares with a current value increase of 170 p.c. over the same period, illustrating the importance of keeping in mind the influence of cost factors when making value comparisons. It is also apparent from the constant dollar estimates that practically all of the volume increase from 1946 to 1953 has occurred in new construction, with repair construction remaining at a relatively constant level. In consequence, repair work is now a much smaller proportion of the total than in earlier years, having decreased from about 34 p.c. in 1946 to 21 p.c. in 1953.

7.—Value of New Construction and Repair and Maintenance Construction in Current and Constant Dollars, 1946-53

NOTE.—“Constant Dollars” means that the amount is given in terms of 1935-39 prices.

(Millions of Dollars)

Year	New Construction		Repair and Maintenance Construction		Total Construction		Total Construction as P.C. of Gross National Product	
	Current	Constant	Current	Constant	Current	Constant	Current	Constant
1946.....	1,074	753	533	385	1,607	1,138	13.4	12.6

1951.....	2,734	1,248	927	432	3,661	1,680	17.1	16.2
1952.....	3,158	1,375	931	409	4,088	1,784	17.8	16.2
1953.....	3,433	1,458	926	396	4,359	1,854

Estimates of the value of work performed by construction contractors and by others in various branches of industry, business and government who use their own labour force to perform construction work are given in Table 8. There is little indication of any change from year to year in the proportionate division of total construction work between these two categories. The construction industry proper accounted for about 68 p.c. of the total value of all work performed in each of the three years and the remaining 32 p.c. was undertaken by other business and government bodies. A further elaboration of these data and their relationship to numbers employed, salaries and wages paid, and value of materials used is given in Table 12, p. 768.

8.—Value of Construction Work Performed and Proportion of Work Done by Contractors and by Others, 1951-53

NOTE.—Actual expenditures 1951, preliminary actual 1952, intentions 1953.

Type of Construction	1951	1952	1953
	\$'000	\$'000	\$'000
Contract Construction—			
New.....	2,006,649	2,271,293	2,509,384
Repair.....	483,678	489,097	486,895

Totals, Construction.....	3,661,152	4,088,740	4,359,306
New.....	2,733,843	3,158,304	3,433,015
Repair.....	927,309	930,436	926,291

¹ Includes work performed by private and public utilities, railway companies, own account home builders and other persons or firms who are not contractors or builders.

Of the total new and repair construction program of \$4,359,000,000 estimated for 1953, building construction accounts for \$2,658,000,000 or 61 p.c., and engineering work for \$1,701,000,000 or 39 p.c. The estimate for each of these categories is above 1952 and 1951, but the proportion that each constitutes of the total program varies somewhat from year to year. Of the total, building construction accounted for 63.1 p.c. in 1951, 59.9 p.c. in 1952 and an estimated 61.0 p.c. in 1953, while engineering construction accounted for 36.9 p.c., 40.1 p.c. and 39.0 p.c. in 1951, 1952 and 1953, respectively.

Changes in the pattern of the construction program illustrating where shifts within the program are occurring from year to year are given in Table 10. For example, of the \$208,000,000 increase in building construction indicated for 1953, \$144,000,000 is accounted for by housing, \$55,000,000 by stores and \$34,000,000 by hospitals. These increases are offset by a \$71,000,000 decline in factories, plants and workshops.

Summary statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 12. While the estimates given for Canada as a whole may be considered as reasonably accurate, those given for individual provinces and by class of builder are only approximations. All of the estimates given for average numbers employed, salaries and wages paid, and cost of materials used are based on ratios of these items to total value of work performed which were derived from the 1951 Census of Construction and applied to the value of work figures obtained in the capital expenditures surveys. Although these ratios were calculated in some detail by type of industry, still further refinements are required to improve the estimates for provinces and class of builder. There are also some difficulties in obtaining the precise geographical location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind the table provides useful estimates.

In using the employment data it is also of value to have a knowledge of the methods used in collecting the basic data on which the employment estimates are based. Respondents are requested to report the average number of employees engaged in construction each month. They are advised on the form that one method of computing the average number of employees is to divide the number of working days in the month into the total number of man-days worked by all employees in the month. The monthly averages are added and divided by twelve to compute the annual average. Thus, the resulting figures are representative of the total number of employees working full time throughout the year. The total number on the payroll at any given time may, of course, be above or below this average.

¹ Actual expenditures 1951, preliminary actual 1952, intentions 1953.

Subsection 2.—Contracts Awarded and Building Permits Issued

In this Section statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the Census of Construction. Further, values of contracts awarded, and especially of building permits, are estimates (more often underestimates) of work to be done.

Contracts Awarded.—According to figures published by MacLean Building Reports Limited, the value of contracts awarded in 1952 decreased by 21 p.c. from those of 1951, the decreases being mainly accounted for by a decline in business, industrial and engineering contracts. The value of contracts awarded for residential building increased by 17 p.c. All provinces, except British Columbia, Quebec and Ontario, shared in an increase in the value of total contracts; the most important advances were made by Alberta and Saskatchewan, value of contracts in the former Province increasing from \$183,000,000 to \$231,000,000 and in the latter from \$39,000,000 to \$59,000,000.

13.—Value of Construction Contracts Awarded, 1916-52

Building Permits.—Statistics of building permits were first collected in 1910, when the series covered 35 urban centres; in 1920 they were extended to cover 58 municipalities, including unincorporated suburban areas, which were becoming increasingly important as residential areas for persons working within the municipal boundaries of urban centres. In 1940, the series was again extended to cover 204 municipalities and in 1948 the coverage was expanded further to include 507 municipalities. However, until plans are advanced, it is felt desirable to maintain comparability with earlier issues of the Year Book by retaining the '204' list.

The estimated value of proposed construction as indicated by building permits issued in 1952 amounted to \$802,737,975, an increase of 18 p.c. over the 1951 value of \$681,161,938.

15.—Estimated Value of Proposed Construction as Indicated by Building Permits Issued in 204 Municipalities, 1951 and 1952

NOTE.—Statistics for these series covering years previous to 1951 will be found in the corresponding tables of earlier editions of the Year Book. For the 35 cities marked (●) the record goes back to 1910; the 23 places marked (○) were added in 1920.

¹ No reports received for September, October and November 1952.

The indexes given in Table 16 show, as far as possible, the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied. Pre-war experience, as indicated by a special study made for 15 cities, shows that the proportions of cost of materials to cost of labour in all construction averaged two-thirds for the former to one-third for the latter. The increase in the cost of recent building operations has probably been much more than is indicated by the increase in the indexes of wholesale prices and wages shown and the proportions of these items to total costs have, no doubt, undergone some variation owing to changes in types and methods of construction and to the greater use of machinery.

Four of the largest cities—Montreal, Toronto, Winnipeg and Vancouver—accounted for \$195,233,769 or 24 p.c. of the value of building permits issued in 204 municipalities in 1952. In 1951, the same cities showed a value of \$161,152,394, also 24 p.c. of the total for that year.

Subsection 3.—Government Aid to House-Building*

Federal Government Assistance, 1952.—Publicly assisted house-building in Canada operates under two types of arrangement. Under one type, Government financial assistance in the form of mortgage loans is extended to prospective homeowners and builders through the National Housing Act, 1944, together with the Canadian Farm Loan Act, 1927, the Veterans' Land Act, 1942, and the Farm Improvement Loans Act, 1944. Under the other, the Federal Government carries on direct house-building activities of veterans' rental units, armed service married quarters and, in conjunction with the provincial governments, joint housing projects for rental. During the eight-year period 1945-52, completions under these government-sponsored plans accounted for about one-third of the new permanent dwellings built in Canada.

The Central Mortgage and Housing Corporation is the Federal Government agency responsible for most of the publicly assisted housing activities. It was incorporated by an Act passed in December 1945 to administer the National Housing Act, 1944, and earlier housing Acts, to provide facilities for the rediscounting of mortgages for lending institutions and to co-ordinate government activities in the housing field. In 1948, the functions of Wartime Housing Limited were transferred to its administration. In November 1950, the charter of Wartime Housing Limited was revived to form Defence Construction Limited and entrusted with carrying out construction of defence projects requisitioned by the Department of National Defence. The Central Mortgage and Housing Corporation provides management and supervisory services to Defence Construction Limited.

The National Housing Act, 1944.—The National Housing Act constitutes the principal legislation of the Federal Government in the field of housing. During 1952, two major changes were made in lending regulations under the Act.

* Prepared in the Economic Research Department, Central Mortgage and Housing Corporation, Ottawa.

The first change occurred in September 1952 when the rate of interest payable by a borrower on joint loans was increased from 5 p.c. to $5\frac{1}{4}$ p.c. per annum calculated semi-annually. The interest rate on new loans of other types under the Act were also raised by one-quarter of one per cent. The move brought the interest rate to $3\frac{3}{4}$ p.c. on loans to limited dividend companies, $4\frac{1}{4}$ p.c. on loans to primary industries, 5 p.c. on loans for rental insurance projects and $5\frac{1}{4}$ p.c. on direct corporation loans to home-owners. The revision in interest rates under the Act conformed with a general increase that had taken place in the interest-rate structure.

A second change in National Housing Act regulations occurred in October 1952 when the maximum loan for rental housing was raised from \$6,700 to \$8,500 for semi-detached and row houses and from \$6,700 to \$7,200 for fully serviced apartments of fireproof construction.

Under the terms of the National Housing Act, the Central Mortgage and Housing Corporation joins with approved private lending institutions in making loans to prospective home-owners or builders of dwellings for sale or for rental. The Corporation advances 25 p.c. of the loan and the lending institution 75 p.c. These joint loans are amortized over a period of not more than 30 years and, in the case of loans to prospective home-owner defence workers, for a period not exceeding 25 years.

The Central Mortgage and Housing Corporation may make direct loans for house building in areas where joint financing is not available through lending institutions on a basis similar to that for joint loans. Special provisions are effective in the case of prospective home-owner defence workers or builders of dwellings for sale to defence workers. Direct loans may also be made for low-rental and medium-rental units to limited dividend companies and companies engaged in the primary industries of logging, lumbering, fishing and mining. Up to the end of 1952, 21 limited-dividend companies had been formed under the sponsorship of business companies or local groups supplemented in some cases by municipal grants or contributions from service clubs. Many of the units constructed through these companies are occupied by widows and old-age pensioners. In addition, when private lending institution funds are not available for suitable rental insurance projects, such projects may be financed by direct loans.

The Rental Insurance Plan, instituted in 1948, is designed to encourage the construction of rental housing accommodation. Owners of projects built under the Plan are guaranteed a return of rent sufficient to pay taxes, operating expenses, debt service and a minimum return of 2 p.c. on equity of the owner. From 1948 to December 1952, projects have been approved involving 18,300 units having an estimated cost of \$135,000,000.

Under the land-assembly provisions of the Act, which provide for the development of raw land into serviced lots for residential purposes and the sale at prices considerably below the market price for comparable lots, lending institutions are guaranteed the recovery of their investment together with an annual return of 2 p.c. Land-assembly projects have also been undertaken directly by the Corporation.

The construction of veterans' rental housing units, first carried out by Wartime Housing Limited and from 1948 by Central Mortgage and Housing, was nearing completion by the end of 1952. These rental units were constructed under federal-municipal agreements. The administration of the construction of armed service married quarters, also in the hands of the Corporation since 1948, continued during 1952.

Sect. 35 of the National Housing Act, 1944, provides that, following agreements between a provincial government and the Government of Canada, the Central Mortgage and Housing Corporation may undertake, jointly with the province, the development of a housing or land-assembly project. Capital costs, profits and losses for such projects are shared 75 p.c. by the Federal Government and 25 p.c. by the provincial government and the province may require the municipality concerned to participate in the provincial share. By December 1952, all provinces except Prince Edward Island had passed complementary legislation and projects were under way in seven of the nine provinces with enabling legislation.

Under the legislation, three main types of housing agreement have been evolved: (1) the construction of houses for rental on an economic or sub-economic basis; (2) the assembly and servicing of residential lots for sale to builders and prospective home-owners; (3) a combined rental-housing and land-assembly project where a portion of the land developed is used for housing and the remainder sold. Completed rental-housing projects are administered by local housing authorities whose members are appointed by provincial Order in Council. Local authorities have been established in 12 municipalities.

By the end of 1952, 38 projects had been approved, 13 for land-assembly only, seven for combined land-assembly and rental housing and 18 for the erection of rental-housing over the whole site. The 22 rental projects will contain 1,937 rental units and the land-assembly projects will involve the servicing of 11,530 lots. By the end of the year, 592 of these lots had been completed and sold to builders and prospective home-owners.

The Canadian Farm Loan Act, 1927.—Under this legislation federal long-term loan assistance for housing as well as for other farm purposes is provided. (See pp. 371-372.)

The Veterans' Land Act, 1942.—This Act is administered by the Department of Veterans Affairs and provides a form of loan and grant assistance to veterans for housing and other purposes. (See pp. 274-275.)

The Farm Improvement Loans Act, 1944.—This Act provides for guarantees in respect of intermediate and short-term loans made by approved lending agencies to farmers for housing and other purposes. (See pp. 372-373.)

Statistics of Federal Assistance in the Housing Program.—The extent of Federal Government assistance to house-building in Canada is shown in Table 17. The year 1935 marked the passage of the Dominion Housing Act and the entry of the Federal Government into the housing field on a continuing basis. This Act was succeeded by the National Housing Acts of 1938 and 1944.

A total of 76,302 dwellings were completed in Canada in 1952. About 3,900 were built directly by the Federal Government; 22,569 were built with the aid of federal loans, including joint loans under the National Housing Act, 1944; and 912 were built with guarantee assistance by the Federal Government.

¹ Exclusive of a small number of dwellings built by Federal Government Departments as part of their normal operations.

Provincial Government Assistance.—As stated previously (*see* p. 775), all provinces except Prince Edward Island had, by December 1952, passed complementary legislation respecting Sect. 35 of the National Housing Act, which provides for joint federal-provincial housing and land-assembly projects. In addition, separate legislation with respect to housing has been enacted in the Provinces of Quebec and Ontario.

Quebec.—An amendment (S.Q. 1952-53, c. 7) to the "Act to improve housing conditions" (S.Q. 1948, c. 6), assented to Dec. 10, 1952, empowers the Government to pay a subsidy on interest charges in excess of 3 p.c. on new dwellings built between Jan. 15, 1948, and June 1, 1955. Formerly the Act applied to dwellings completed before Jan. 15, 1953. The amendment also authorizes the expenditure of \$40,000,000 for purposes of the Act.

Ontario.—The Housing Development Amendment Act, 1952, empowers the Province and a municipality to enter into joint housing projects and empowers a municipality to contribute to the cost of a housing project or to issue debentures for the purpose of a housing project without reference to its municipal board or the assent of its electors. For industries locating in rural areas and in small communities, the Province and municipality may participate with the Central Mortgage and Housing Corporation in the development of joint housing projects, part of the cost of which will be borne by the Corporation. Under certain conditions, the Province may expropriate land in municipalities for the purpose of housing projects. The Act came into force Apr. 10, 1952, and amended the Housing Development Act (R.S.O. 1950, c. 174).

Under the Planning Amendment Act, 1952, municipalities with an approved official plan may designate an area within the municipality as a redevelopment area and, upon the passage of a by-law, may acquire land within that area and clear and

prepare it for residential, commercial, industrial or other designated purpose. The Act came into force May 1, 1952, and amended the Planning Act (R.S.O. 1950, c. 227).

The Rural Housing Assistance Act, 1952, authorizes the establishment of a Crown company—the Rural Housing Finance Corporation—which is empowered to lend and invest mortgage money in order to provide financial assistance in the building of new houses in rural villages and other rural areas. The Corporation may lend money independently or in co-operation with the Central Mortgage and Housing Corporation or with any approved lending institution. The Act came into force on Apr. 10, 1952.

The Junior Farmer Establishment Act, 1952, provides for the establishment of a corporation for the purpose of making loans to assist young qualified farmers in the purchase, development and operation of their farms. The corporation may make loans for the erection and improvement of farm houses. A loan may be secured as first-mortgage on farm property and shall not exceed \$15,000, repayable in 25 years. The Act came into force on Apr. 10, 1952.

The Elderly Persons Housing Aid Act, 1952, authorizes the Province to make grants to any municipality to assist in the construction and equipment of low-rental housing units for elderly persons. The amount of any grant will be based on the lower of \$500 for each dwelling or of 50 p.c. of the capital cost of the project to the municipality. The Act came into force on Apr. 10, 1952.

Subsection 4.—Construction of Dwelling Units

The volume of new house-building was greater in 1952 than in the previous year. Total housing starts numbered 83,246, an increase of 21 p.c. over the number started in 1951. All regions in the country shared in the increase: in the Atlantic Provinces, housing starts rose 33 p.c. to 4,720 units; in Quebec, 24 p.c. to 26,355 units; in Ontario, 10 p.c. to 30,016 units; in the Prairies, 40 p.c. to 15,044 units; and in British Columbia, 25 p.c. to 7,111 units. Although housing starts were higher in 1952, housing completions numbered 73,087, a decline of 10 p.c. from the 1951 total. The smaller number of completions was accounted for by a reduced carry-over of uncompleted dwellings from 1951 to 1952 as compared with the number carried over from 1950 to 1951.

Of the dwellings completed in 1952, 81 p.c. were built in urban areas; 77 p.c. were one-family detached houses, 16 p.c. were apartment units and 7 p.c. were two-family dwellings.

Tables 20, 21 and 22 summarize the results of surveys conducted by the Dominion Bureau of Statistics and the Central Mortgage and Housing Corporation.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Canada, nearly 4,000 miles in length from east to west, with the main topographic barriers running in a north-south direction and a relatively small population of 14,781,000 (June 1, 1953, estimate) unevenly distributed along the southern strip of this vast area, presents unusual difficulties from the standpoint of transportation and communication. Different parts of the country are shut off from each other by water barriers such as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by areas of rough, rocky forest terrain such as the region lying between New Brunswick and Quebec and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. To such a country, with a population so dispersed and producing for export as well as for consumption in distant areas of the country itself, cheap transportation and efficient communication systems are necessities of existence.

The value of each of the principal agencies of transportation is appraised in Parts II, III, IV, V and VI of this Chapter and the development of communication facilities in Parts VII, VIII, IX and X. Government control over all such transportation and communication agencies is covered in Part I.

PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION

Section 1.—Government Control Over Agencies of Transportation

The Federal Government's control and regulation of transportation reflects to a considerable extent conditions that date back to the period when the railways possessed a virtual monopoly of transportation within the country. Although federal regulation was a direct outcome of such particular matters as the prevention of unjust discrimination in rates and charges resulting from monopoly conditions in the industry and the safety of transportation facilities and operating practices, yet the railways have been so involved in the public interest that their regulation has been extended to become the most comprehensive of any industry in Canada.

In the meantime, conditions in the transportation industry have been drastically altered by the increasing competition arising from the advance of highway transportation. Unlike the competition that existed between railways in early stages of their development, to-day's competition shows little indication of starting a trend toward consolidation and a return to semi-monopolistic conditions within the industry. Since so many shippers now may provide their own transportation it is evident that a large part of the present competition between common carriers will become a permanent feature of the transportation industry.

It is not surprising that regulations, which under monopoly conditions were not onerous to the railways or were purely nominal in their effect, should be alleged to become increasingly restrictive and hampering under highly competitive conditions. Regulatory authorities are, therefore, faced with the problem of piecemeal revision of their regulations—retaining those where railway monopoly or near-monopoly conditions still make them necessary in the public interest, and relaxing those where competition can be relied on to protect the public in order to enable the railways to meet this competition more effectively. The emphasis has shifted from the regulation of monopoly to the co-ordination of several competing modes of transport.

In 1936, the Federal Department of Railways and Canals became the Department of Transport, unifying in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology. Road and highway development is mainly under provincial or municipal control or supervision, although the question of the control of interprovincial highway traffic is currently awaiting the decision of the Imperial Privy Council.

Under the Transport Act, 1938, the Board of Railway Commissioners became the Board of Transport Commissioners and, in addition to its authority over railways, it was given power to regulate certain aspects of water transportation on the Great Lakes, the Mackenzie River and the Yukon River.

The Royal Commission on Transportation, in its Report to Parliament in 1951, recommended a further step in the co-ordination of transport agencies by the creating of a single Board to take over the functions now discharged by the Board of Transport Commissioners, the Air Transport Board and the Canadian Maritime Commission. No action has been taken by Parliament on this recommendation.

The Board of Transport Commissioners for Canada.—An explanation of the situation that led to the introduction of railway regulation by Commission in Canada, as well as other information relating to the organization, procedure, judgments, etc., of the Board of Transport Commissioners is given in the 1940 Year Book, pp. 633-635.

The powers of the Board with regard to rail transport cover almost all aspects of railway activities including corporate organization, location, construction and operation of lines, rates and charges. The railways under the Board's jurisdiction include those operating interprovincially, the Canadian portions of United States lines and those incorporated under federal charter. In addition, the Board assumes jurisdiction over any railway which by Act of Parliament has been declared to be for the general advantage of Canada. In practice, this means that apart from provincially owned railways in Ontario and British Columbia, all railways in Canada are under the Board's authority.

Once constituted, the Board became the logical body in which to entrust the regulation of other transportation and communication agencies. The list has grown steadily and now includes express companies, telegraph companies, telephone companies other than those provincially or municipally controlled, international bridges and tunnels, inland shipping, and the recent addition of pipelines (1949). Regulation of traffic of inland-water carriers on the Great Lakes-St. Lawrence system is limited to package freight and thus excludes the important bulk traffic in grain, coal and ore.

The most recent review of transportation regulation was that undertaken by the Royal Commission on Transportation, under the chairmanship of the Honourable W. F. A. Turgeon, which held extensive hearings in 1949-50 and issued its Report in 1951. (See 1952-53 Year Book, p. 741.) Certain of its recommendations have been incorporated into amendments to the Railway Act and other legislation is either in effect or in course of being put into effect. These include: the equalization of freight rates between all regions of Canada, affecting chiefly the class and commodity mileage rates; the requirement that, when transcontinental competitive rates are published, the corresponding rates to intermediate points shall not be more than one-third greater than the former; the payment by the Government of Canada of the cost of maintaining the so-called 'bridge' lines of the transcontinental systems between Sudbury, Capreol and Cochrane on the one hand and Port Arthur and Armstrong on the other, up to the amount of \$7,000,000 annually, the amounts so received by the railways to be offset by certain reductions in rates between Eastern and Western Canada; the requirement of a uniform classification of accounts to be prescribed by the Board of Transport Commissioners for the Canadian Pacific Railway and the Canadian National Railways; and the simplification of the capital structure of the Canadian National Railways involving the replacement of Government-held debt by preferred stock.

Certain other recommendations of the Commission have been put into effect or are being studied with a view to putting them into effect at an early date without any legislative amendments. These include the establishment of a uniform carload mixing rule and a general revision of the freight classification.

The Air Transport Board.—A summary of the administrative organization and general functions of the Air Transport Board will be found in the 1952-53 Year Book, pp. 740-741.

The air transport industry, like many another industry, has been profoundly influenced by the recent expansion of the national economy and it has been found necessary, therefore, to modify and adjust the regulatory controls and administrative procedures falling within the Air Transport Board's terms of reference. Since 1950, the Board's regulations and administrative orders have undergone complete revision as the result of a modification of the air-carrier regulatory classification.

Recent modifications in the Board's policy have reflected the use of increasingly larger aircraft coupled with the continued development in importance of route-type transportation services as opposed to fixed-base operations of various types. Policy decisions have given increased prominence to route-type services and, at the same time, some of the controls over specialty activities of various kinds and, later, small-scale charter activities have been relinquished. A considerable number of charter carriers utilizing small aircraft exclusively were freed from tariff-control and statistical-reporting requirements and, at the same time, base-protection privileges afforded by the Board were withdrawn.

The rapid industrial and commercial advancement of the country, highlighted by such developments as the exploitation of iron-ore deposits in northern Quebec, the northward movement of mining interests in the Prairie Provinces and the aluminum undertaking on the northern coast of British Columbia, necessitated the alteration of the basic policies underlying Air Transport Board regulation. Thus, the fundamental principle of single-carrier service over mainline routes is to be modified to permit some degree of competition on a regional basis.

The Air Transport Board has done much to crystallize international charter operations and, in co-operation with United States authorities, has recently created new procedures facilitating non-scheduled air-traffic movements across the international boundary.

Section 2.—Government Control Over Agencies of Communication*

The development and control of radio-communication in Canada from the beginning of the century is outlined in the 1945 Year Book, pp. 644-647.

The present phase of national radio broadcasting in Canada was entered upon in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission (*see* p. 887). The Act gave the Corporation wide powers in the operation of the system and gave to the Minister of Transport the technical control of all broadcasting stations and the authority to make regulations for the control of any equipment liable to cause interference with radio reception.

With the exception of those matters covered by the Canadian Broadcasting Act of 1936, radio-communications are now regulated under the Radio Act, 1938, and Regulations. In addition, all radio-communication matters are administered in accordance with the provisions of the International Telecommunication Convention and Radio Regulations annexed thereto, as well as such regional agreements as the Inter-American Telecommunications Convention and Inter-American Agreement, and the North American Regional Broadcasting Agreement.

* Revised under the direction of G. C. W. Browne, Controller, Telecommunications Division, Department of Transport, Ottawa.

By Order in Council P.C. 2526, dated June 8, 1948, responsibility for telegraph and telephone services formerly operated by the Federal Department of Public Works was transferred to the Minister of Transport. The general object of these services is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest.

A Crown company, Canadian Overseas Telecommunications Corporation was created by Act of Parliament (Dec. 10, 1949) to acquire for public operation all external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth.

Land line telegraph and telephone tariffs and tolls charged by companies incorporated by the Federal Government are regulated by the Board of Transport Commissioners under the provisions of the Railway Act.

Tariffs and tolls charged to the public by individuals or companies for radio telephone or telegraph communications within Canada are likewise regulated by the Board of Transport Commissioners under the provisions of the Railway Act and the Regulations made under the Radio Act, 1938.

PART II.—RAILWAYS*

The treatment of rail transportation is divided into three Sections dealing, respectively, with steam railways, electric railways and express companies.

Section 1.—Steam Railways

The steam railway is the most important transportation agency from the standpoint of investment and of traffic handled and the statistical field is more completely covered for this form of transportation than for any other.

Subsection 1.—Mileage and Equipment

Construction was begun in 1835 on the first steam railway in Canada—the short link of 16 miles between Laprairie and St. Johns, Que.—but only 66 miles of railway were in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building from 1900 to 1917, the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed. For the consolidation and organization of the Canadian National Railway System see the 1940 Year Book, pp. 635-638. The Canadian National Railways took over the operation of Newfoundland's railway facilities on Apr. 1, 1949. (See the 1952-53 Year Book, p. 743.)

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. More detailed information is given in the annual reports of the Division. Certain of the financial statistics are compiled in co-operation with the Department of Transport.

1.—Steam-Railway Mileage, 1900-51

NOTE.—Corresponding figures of total mileage of single track for the years 1835-1909 are given in the 1941 Year Book, p. 546.

¹ As at June 30 for this and previous years.

² As at Dec. 31 for this and later years.

There has been a tendency for railway mileages to decline slightly during the past decade because of the abandonment of unprofitable lines. However, three important new lines are currently nearing completion: the Quebec, North Shore and Labrador, about 360 miles in length; the 150-mile Sherridon-Lynn Lake branch line in northern Manitoba; and the 46-mile Terrace-Kitimat line in British Columbia. Of the 42,956 miles of single track operated in 1951, over 50 p.c. were Canadian National Railway lines.

Rolling-Stock.—The figures in Table 2 may be supplemented by the statement that, between 1920 and 1951, the average capacity of box cars increased from 34.779 tons to 44.166 tons, of flat cars from 33.459 tons to 43.269 tons, of coal cars from 43.404 tons to 59.579 tons, and of all freight cars from 35.141 tons to 45.961 tons. The average tractive power of the locomotive increased from 31,112 lb. in 1920 to 42,488 lb. in 1951. The steady growth in dieselization is illustrated by the advance from 54 units at the end of 1947 to 574 units at the end of 1951.

2.—Rolling-Stock of Steam Railways, as at Dec. 31, 1947-51

¹ Includes, for the first time, 46 steam and 3 diesel locomotives, 98 passenger cars and 1,004 freight cars in service in Newfoundland.

Subsection 2.—Finances

The tables in this Subsection deal with capital liability, capital investment, earnings, operating expenses, employees and their earnings and government aid to steam railways.* Financial statistics of government-owned railways are given in Subsection 4. Other statistics of revenue in relation to traffic are included in Table 9.

Capital Liability.—Table 3 shows capital liability of steam railways from 1932. The reduction after 1937 was brought about by the Canadian National Capital Revision Act, explained in the 1939 Year Book, p. 644.

* Statistics for individual railways are given in DBS annual report, *Statistics of Steam Railways of Canada*.

3.—Capital Liability¹ of Steam Railways, 1932-51

NOTE.—Figures for the years 1876 to 1925, inclusive, are given in the 1927-28 Year Book, p. 649; those for 1926-31 in the 1947 edition, p. 662.

¹ Does not include Canadian railway capital owned by Canadian railways.
approximately \$40,000,000 railway debt in Newfoundland assumed in 1949.

² Exclusive of

Capital Investment.—The increase of \$95,885,622 in capital liability during 1951, as shown in Table 3, compares with an increase in investments in road and equipment of \$156,254,921, as shown in Table 4, and reflects improvements made during the year. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government Departments, etc., as well as by high earnings during the war years.

4.—Capital Invested in Road and Equipment of Steam Railways, 1947-51

NOTE.—Expenditures for Newfoundland are included from Apr. 1, 1949.

¹ Details of this item are given in DBS annual report, *Statistics of Steam Railways of Canada*.

Earnings and Expenses.—The operating ratio, or ratio of expenditure to revenue, of Canadian railways increased from about 70 p.c. to over 90 p.c. between 1917 and 1920 and remained high thereafter, owing largely to declining revenue without corresponding reductions in expenses during the depression period. The period from 1938 to 1943 showed a sharp decline in this ratio, caused primarily by increased freight traffic occasioned by World War II and a subsequent acceleration in gross earnings. A steadily rising trend since 1943 has been attributed to higher costs for materials and labour, although a decided reversal was shown for 1950 despite the nine-day strike in late August. Expenses for 1951 show a considerable increase over the previous year accounted for by the wage increases received as a result of the strike settlement.

5.—Earnings and Operating Expenses of Steam Railways, 1942-51

NOTE.—Gross earnings and operating expenses for the years 1875 to 1914 are given in the 1916-17 Year Book, p. 434; those for 1915-25 in the 1941 Year Book, p. 550; for 1926-39 in the 1942 Year Book, p. 585; and for 1940-41 in the 1951 Year Book, p. 722. Figures for Newfoundland are included from Apr. 1, 1949.

¹ Includes Newfoundland railways from Apr. 1.

Employment and Salaries and Wages.—The number of railway employees increased in 1951 by 58 p.c. over 1939 while salaries and wages increased by about 212 p.c. Maintenance of equipment employees, on hourly rates, worked about 2 p.c. more hours and were paid 101 p.c. more wages per hour; average hours worked

by transportation employees were slightly less than the 1939 average and their pay was increased by about 94 p.c. These figures reflect the increases received in the strike settlement in August 1950 and the conversion to the five-day week in 1951.

7.—Steam Railway Employees and Salaries and Wages, 1942-51

NOTE.—Figures for the years 1912-39 are given in the 1941 Year Book, p. 551; for 1940-41 in the 1951 edition, p. 723. Figures for Newfoundland included from Apr. 1, 1949.

¹ Figures include employees or wages for "outside operations" amounting to from 3 p.c. to 6 p.c. of total employees and from 2 p.c. to 5 p.c. of total salaries and wages.

² Includes approximately \$10,000,000 in wages earned in 1943.

Government Aid to Railways.—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for Federal and Provincial Governments and even for municipalities to extend some form of assistance. The form of aid was, generally, a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way.

As the country developed, the objections to the land-grant method became more apparent and aid was given more frequently in the form of a cash subsidy per mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government. No new land grants or cash subsidies have been advanced by either the Federal or Provincial Governments since 1939. The situation, as it existed at Dec. 31, 1940, is set out in the 1942 Year Book, pp. 587-588.

During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure, through funds raised by the issue of new bonds with Federal Government guarantee. Bonds guaranteed by the Governments of Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have been eliminated in this manner in recent years.

8.—Railway Bonds Guaranteed by Federal and Provincial Governments, as at Dec. 31, 1951

¹ Does not include \$6,984,883 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

Subsection 3.—Traffic

Passenger and Freight Traffic.—Table 9 shows the passenger and freight statistics for all steam railways for the years 1942-51. A separate analysis is given at pp. 798-799 of the operations and traffic of the Canadian National Railways, since this System is controlled by the Federal Government.

9.—Statistics of Passenger and Freight Services and Revenue Receipts, 1942-51

NOTE.—Figures for 1910-41 are given in the corresponding table of previous Year Books.

¹ Includes express, baggage, mail and other cars.
Newfoundland.

² Duplications included.

³ Includes

⁴ Includes caboose miles but excludes miles made in passenger and non-revenue trains.

⁵ Duplications eliminated; see Table 10 for details of freight carried.

Commodities Hauled.—Revenue freight carried by the railways in 1951 showed an increase of 10.6 p.c. over 1950 and exceeded the previous peak volume reached in 1944. The average haul increased from 385 miles in 1950 to 399 miles in 1951 with a corresponding increase in ton miles. The principal commodities showing increase over 1951 were wheat, coke, ores and concentrates, sand and gravel and stone. Lumber, timber and pulpwood moved in heavier volume while most items in the manufactures and miscellaneous group registered improvement. During the war years the intransit movement of war supplies, motor-vehicles, and gasoline and petroleum products between United States points over Canadian lines was particularly heavy and, with wheat, was responsible for the 1944 record.

10.—Commodities Hauled as Freight on Steam Railways, 1947-51

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways. Figures for Newfoundland are included from Apr. 1, 1949.

¹ Includes trespassers walking along tracks, stealing rides, etc., and persons crossing tracks at level crossings.

Accidents tabulated include all those in which railway trains were involved and accidents on railway property. The classification of accidents used in the Dominion Bureau of Statistics vital statistics treats collisions between motor-vehicles and trains as motor-vehicle accidents; provincial statistics also class them as motor-vehicle accidents and, consequently, adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor-vehicle.

Subsection 4.—The Canadian National Railway System

A description of the origin and growth of Government-owned railways in Canada is given in the 1926 Year Book, pp. 601-603, in an article recording their consolidation under the Canadian National Railways in 1923. The Hudson Bay Railway is a direct liability of the Federal Government and has been operated by the Canadian National Railways for the Government since Apr. 1, 1935, but is not included in the data for Canadian National Railways; to Mar. 31, 1951, the total capital expenditure on this account was \$33,466,861, exclusive of the expenditure of \$6,240,096 on the terminal at Port Nelson, Man., and a cumulative loss of \$5,208,585 on the Railway operation. The operating deficit for the year ended Mar. 31, 1951, was \$228,420.

On Apr. 1, 1949, the Canadian National Railways took over the operation of the Newfoundland Railway embracing its 705 miles of line, 14 coastal steamers and a dry dock at St. John's; communications services of the Newfoundland Government Posts and Telegraphs were also transferred for operation to the Canadian National Railways. (The Newfoundland Hotel was consigned towards the end of the year.)

Effective Jan. 1, 1950, the Canadian National Railways took over the operation of the Témiscouata Railway which was purchased by the Government in 1949, thus adding about 69 miles of line.

The Quebec Railway, Light and Power Company (Montmorency Division), having 25.7 miles of single track, was purchased and incorporated as part of the System, Nov. 1, 1951.

The major portion of Federal Government investment in railways consists of construction costs of the Intercolonial System, the National Transcontinental Railway and the Hudson Bay Railway, and the purchase price of small railways in the eastern provinces.

In view of the interest in the publicly owned railway system, the following salient statistics are presented showing the assets, debt, operating accounts, mileage and traffic for the Canadian National Railway System. More detail is available from DBS report, *Canadian National Railways, 1923-52*.

13.—Assets of the Canadian National Railway System, as at Dec. 31, 1922 and 1952

¹ Increase in current liabilities \$6,526,863.

Capital Structure and Debt.—Major changes resulting from the Canadian Railways Capital Revision Act, 1952, were:—

- (1) \$736,385,405 of interest-bearing debt to the Federal Government, which represented 50 p.c. of the borrowed capital outstanding on Dec. 1, 1951, was exchanged for Canadian National Railway Company 4 p.c. non-cumulative preferred stock. Dividends on the 4 p.c. preferred stock must be paid to the extent that earnings are available after income tax has been paid.
- (2) Outstanding loans from the Federal Government to the amount of \$100,000,000 were converted into a 3½ p.c. 20-year debenture which is to mature Jan. 1, 1972. No interest is payable on this debenture for the first 10 years.
- (3) Capital stock of the Canadian National Securities Trust in the amount of \$378,518,135 was transferred to the Canadian National Railway Company in exchange for a like amount of the Company's capital stock.
- (4) In each of the years 1952 to 1960, inclusive, the Federal Government will purchase 4 p.c. preferred stock in amounts equal to 3 p.c. of the annual gross revenues, these funds to be used by the Railway for financing capital improvements.

As a consequence of these adjustments, the proportion of total capitalization represented by equity capital in shareholder's account was raised from 34.5 p.c. at Dec. 31, 1951, to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed

capital was correspondingly reduced. It will be noted that these percentages are calculated exclusive of the \$4,518,890 of capital stock of subsidiary companies which was held by the public on the above dates.

The following statement shows the effect of the Act on the capitalization of the system.

CAPITALIZATION OF CANADIAN NATIONAL RAILWAYS

Item	Balance at Dec. 31, 1951	Year 1952 Adjustments Effective Jan. 1, 1952, under Capital Revision Act, 1952	Year 1952 Current Transactions	Balance at Dec. 31, 1952

¹ The capital stock of the Securities Trust, previously owned by the Government of Canada, was transferred to the Canadian National Railway Company in consideration for a like amount of capital stock of the National Company. ² The 4 p.c. preferred stock is represented by shares having a par value of one dollar each, in respect of which non-cumulative dividends shall, from time to time, be paid to the extent that earnings are available for distribution in any year. The amount issued under the adjustment authorized by the Capital Revision Act, and for which a like amount of Government of Canada loans have been cancelled, is equal to 50 p.c. of the borrowed capital at Dec. 31, 1951. ³ Excludes shares of subsidiary companies owned by public amounting to \$4,518,890 for 1951 and \$4,516,490 for 1952.

14.—Capital Structure of the Canadian National Railway System, as at Dec. 31, 1943-52

Operating Finances.—Gross revenue, operating expenditure and net revenue include only those from steam railway and commercial telegraph operations, but the deficits are for the entire System, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Under the Canadian National Railways Capital Revision Act, 1937, interest on Federal Government loans, amounting to \$530,832,598, and Government claims for interest, amounting to \$43,949,039, were cancelled as liabilities of the Railway and these have been eliminated from Table 15 as fixed charges. Loans of \$270,037,438 for capital and \$373,823,120 for deficits were cancelled.

15.—Gross Revenue, Operating Expenditure, Net Revenue, Fixed Charges and Deficits of the Canadian National Railway System,¹ 1943-52

NOTE.—Appropriations, etc., for the Hudson Bay Railway are not included with these data; although the Railway was returned to the Government while under construction, it is not now a part of the Canadian National Railways. Figures for 1911-25 are given in the 1936 Year Book, p. 660; for 1926-39 in the 1942 Year Book, p. 590; and for 1940-42 in the 1951 edition, p. 731. Figures for Newfoundland are included from Apr. 1, 1949.

¹ Includes the Central Vermont Railway, Inc. Contributed by the Federal Government.

² Includes appropriations for insurance fund.

Mileage and Traffic.—At Dec. 31, 1952, steam-railway track mileage of the Canadian National Railways (including lines in the United States and Newfoundland but exclusive of the Northern Alberta Railways and Toronto Terminals Railway, which are controlled jointly by the Canadian National and the Canadian Pacific Railways) was 24,219.6 miles. Including the Thousand Islands Railway, 4.51 miles, controlled but operated separately, the total steam-railway mileage was 24,224.1. The grand total, including 72.9 miles of electric lines, was 24,297.0 miles.

Section 2.—Electric Railways*

Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. The first electric railway line in Canada, and probably the first in North America, ran between Windsor and Walkerville and was established early in June 1886 (it is recorded that it was in active operation before June 11).

Cheap and reasonably rapid passenger conveyance is a necessity of modern urban life. In some cities of Eastern Canada, electric railways are still operated by private companies under city franchises, while in a number of cities in Ontario and Western Canada the electric railways are owned and operated by the municipalities. The number of electric railways in operation declines each year as motor-buses replace electric trams.

Statistics presented in this Section cover the urban and inter-urban operations of the electric railway systems.

* More detailed information is given in DBS publication, *Electric Railways of Canada, 1951*.

Equipment.—The single overhead-trolley system is used by all electric street railways. Many municipalities have begun to use trackless trolley-buses, 1,035 of which were in service in 1951. Of the 22 systems, six operated electric cars, motor-buses and trolley-buses; nine operated trolley-buses and motor-buses; three electric cars only; two electric cars and motor-buses; and one system operated trolley-buses only. There were 1,979 motor-buses in service during 1951.

Finances.—When electric railways have ceased to operate because of either a decline in traffic or the substitution of motor-buses, their statistics have been excluded from Table 18. Consequently, fluctuations in revenue, etc., have been affected by variations in traffic and by changes in the mode of local transportation. Despite these changing conditions, the gross revenue of electric railways continued to increase from the low point reached in 1933, and very marked increases were shown from 1940 to 1945. The ratio of expenses to receipts rose from a low of less than 63 p.c. in 1942 to 99 p.c. in 1951. Much of the decline in the value of stocks and the increase in funded debt during the past few years has been the result of the change in a number of systems from private to public ownership.

18.—Financial Statistics of Electric Railways, 1942-51

NOTE.—Figures for 1901-41 are given in the corresponding table of previous Year Books beginning with the 1926 edition.

Year	Capital Liability			Investment in Road and Equipment	Gross Earnings	Operating Expenses	Ratio of Expenses to Receipts	Em- ployees	Salaries and Wages

Traffic.—The passenger mileage travelled by electric cars in 1951 amounted to 78,324,430, by trackless trolley-buses 31,167,485 and by motor-buses 57,825,006. The number of passengers carried by electric railways in the years since 1939 showed

an especially sharp rise over previous years owing to improved conditions and the curtailment of passenger-automobile traffic during the War. The 1,344,916,773 passengers carried in 1946 was by far the greatest traffic ever handled by these systems; the number in 1951 was the lowest since 1942.

19.—Statistics of Electric-Railway Operations, 1942-51

Note.—Figures for 1901-41 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

The Toronto Underground Electric Railway.—Construction of Canada's first underground electric railway or subway commenced at Toronto in 1949 and is expected to be put in operation in March 1954. The route of the subway follows

the general line of Yonge Street, a distance of about 4.5 miles, from Front Street to Eglinton Avenue. Twelve stations are located along the line and a pedestrian tunnel links the Union Station and the Royal York Hotel with the subway.

Cost of the Yonge Street subway alone, originally estimated at \$28,250,000, is now placed at \$50,500,000. Equipment for the new line will cost an additional \$8,300,000. Sub-surface sections of the subway are from six to 20 feet underground. Rapid-transit cars, 104 in number, each of 62-passenger capacity will be used. The 500-foot platforms at all stations will accommodate trains of up to eight cars in length which will handle a peak load of 40,000 passengers per hour in each direction.

Section 3.—Express Companies

Express service is an expedited freight service on passenger trains, but express companies do not own the means of performing these services; railway facilities are used by virtue of contracts with the railway companies. Express companies in Canada have thus always operated in close co-operation with the railways.

Goods are sent by express for quick transit, so that express rates do not generally compete with freight rates. The Dominion Express Company, in pursuance of its contract with the Canadian Pacific Railway, gave, in its first tariff, a rate of two and one-half times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue and the rates paid by the shipper are subject to the approval of the Board of Transport Commissioners. All express companies are organized under powers conferred by Acts of the Federal Government and their business consists in the expeditious shipment of valuable live stock and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

Express Company Operations.—Four express organizations operate in Canada—three Canadian and one American. The Canadian Pacific Express Company, formerly the Dominion Express Company, is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Incorporated, operates over the Canadian sections of United States railways and over the route from Skagway, Alaska, to points in Yukon Territory. No statistics are available on the volume of traffic carried by express. Much of the traffic consists of parcels and small lots that would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables and other perishable commodities.

PART III.—ROAD TRANSPORTATION*

In this Part of the Chapter, highways and motor-vehicles are treated as related features of transportation. Following an introductory section, which summarizes provincial regulations regarding motor-vehicles and motor traffic, the entire subject of road transportation is dealt with under the headings of roads and highways and motor-vehicles.

Section 1.—Provincial Motor-Vehicle and Traffic Regulations†

NOTE.—It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The sources of information for detailed regulations for specific provinces and territories are given at pp. 805-808.

General.—The registration of motor-vehicles and of motor-vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations that are common to all provinces and territories are summarized under the following headings:—

Operator's Licences.—The operator of a motor-vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable in most provinces only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs and, in some cases, for those granted licences who have not reached the specified age.

Motor-Vehicle Regulations.—In general, all motor-vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two (one only in Saskatchewan) registration plates, one on the front and one on the back of the vehicle (one only for the back in the case of trailers). A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State that grants reciprocal treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes, and provide that equipment include non-glare headlights, a proper rear light, a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

Traffic Regulations.—In all provinces and territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. Speed limits, usually of 50 miles per hour, are in effect; slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor-vehicles must not pass a tram that has stopped to take on or discharge passengers, except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

* Except as otherwise indicated, the material in this Part has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

† The information in this Section has been revised from material provided by the officials in charge of the administration of motor-vehicle and traffic Acts and Regulations in the individual provinces and territories.

Penalties.—Penalties ascend in scale from small fines for minor infractions of any of the regulations to suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting to operate a motor-vehicle while intoxicated.

There is such wide variation among the different provinces and territories regarding the bases of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor-vehicles, that it is impossible even to outline them satisfactorily in the space available here.

Safety Responsibility Legislation.—All the provinces and territories of Canada, with the exception of Yukon Territory, have enacted legislation under this heading which is sometimes referred to as Safety Responsibility Legislation and at other times as Financial Responsibility Legislation. The provincial outlines beginning at the bottom of this page give the latest amendments to this legislation and the authorities responsible for the administration of motor-vehicles.

Unsatisfied Judgment Funds.—In recent years a new type of motor-vehicle legislation has been enacted in many of the provinces. This has usually taken the form of an amendment to the motor-vehicle laws of the province and provides for the establishment of an Unsatisfied Judgment Fund, out of which are paid judgments awarded for damages arising out of motor-vehicle accidents in the province which cannot be collected in the ordinary process of law. The Fund is created by the collection annually of an Unsatisfied Judgment Fund fee from the registered owner of every motor-vehicle or from every person to whom is issued a driver's licence. This fee in no case exceeds \$1 per annum. A feature of this legislation which is contained in some provincial statutes provides for the payment of judgments in the case of so-called 'hit and run' accidents. In such cases, when neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles; any judgment secured against the Registrar is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. The limits are \$5,000 for one person, \$10,000 for two or more persons injured in one accident and \$1,000 for property damage. In the case of 'hit and run' accidents payments are made only for personal injuries or death.

The following provinces now have this type of legislation in effect: Newfoundland, Prince Edward Island, Nova Scotia, Ontario, Manitoba, Alberta and British Columbia.

Newfoundland.—*Administration.*—Deputy Minister of Public Works, St. John's. *Legislation.*—The Highway Traffic Act, 1941, as amended.

Prince Edward Island.—Provision was made in the Highway Traffic Act, 1936, for cancellation of the licence of any person unable to satisfy judgment against him arising out of a motor-vehicle accident. The licence is to be reissued only when proof of financial responsibility is made to the Provincial Secretary. In 1950, a revised and consolidated Highway Traffic Act was passed.

Administration.—The Provincial Secretary, Charlottetown. *Legislation.*—The Highway Traffic Act (R.S.P.E.I. 1951, c. 73).

Nova Scotia.—*Administration.*—Motor Vehicle Branch, Department of Highways and Public Works, Halifax. *Legislation.*—The Motor Vehicle Act (1932, c. 6) as amended, and the Motor Carrier Act (R.S.N.S. 1923, c. 78) as amended.

New Brunswick.—*Administration.*—Motor Vehicle Division, Provincial Tax Branch, Department of the Provincial Secretary-Treasurer, Fredericton. *Legislation.*—The Motor Vehicle Act (R.S.N.B. 1951, c. 73) as amended.

Quebec.—In 1949, the Quebec Government passed an amendment to the Motor Vehicle Act, which provides for the suspension, for at least three months, of the driver's licence and registration certificate of any person proved guilty of driving while under the influence of liquor or narcotics, or of driving in a dangerous manner or neglecting to stop after an accident or failing to give aid to persons injured in such accident, or of driving a motor-vehicle without being provided with a licence and found guilty of an accident while doing so or while his licence is suspended. In case of a suit for damages resulting from fault, carelessness or neglect, the driver's licence and registration certificate, or either, may be suspended until judgment has been satisfied. In such case, recovery of licence or certificate may require the furnishing of a guarantee, in the form of insurance, deposit or otherwise, of sufficient financial responsibility to afford reasonable protection to the public against any future accident.

Administration.—Motor Vehicle Bureau, Provincial Revenue Offices, Treasury Department, Quebec. *Legislation.*—The Motor Vehicle Act (R.S.Q. 1941, c. 142) as amended.

Ontario.—The Financial Responsibility provisions of the Ontario Highway Traffic Act came into force in 1930. This Part of the Act provides for the automatic suspension of the driver's licence and motor-vehicle permit of a person convicted of one of the more serious offences against the Act, an offence involving the use of a motor-vehicle under the Criminal Code or for failure to satisfy a judgment arising out of a motor-vehicle accident.

Administration.—Motor Vehicles Branch, Department of Highways, Toronto. *Legislation.*—The Highway Traffic Act (R.S.O. 1950, c. 167), the Public Vehicles Act (R.S.O. 1950, c. 322) and the Public Commercial Vehicles Act (R.S.O. 1950, c. 304).

Manitoba.—In 1945, the financial responsibility law of Manitoba was repealed and replaced by new safety responsibility legislation. Features under this legislation include the immediate and automatic impounding of any motor-vehicle after an accident if the operator is unable to produce proof of financial responsibility at the time. Impoundment continues until the owner or driver settles any claims for damages or bodily injury sustained, or deposits with the Provincial Treasurer security sufficient to cover any judgment that may be recovered and until the owner of the vehicle has filed proof of financial responsibility for the future. Driving privileges of financially irresponsible motorists are indefinitely suspended pending settlement of damage claims or deposit of security and the filing of proof of financial responsibility.

Administration.—Provincial Treasurer, Winnipeg. *Legislation.*—The Highway Traffic Act (R.S.M. 1940, c. 93) as amended.

Saskatchewan.—Financial responsibility legislation in this Province was placed on the Statutes in 1933 and provides that, where a judgment is rendered in any court in Canada for damages on account of death or injury to any person or on account of property damage in excess of \$50, occasioned by a motor-vehicle, and the person fails to satisfy the judgment within 30 days from the date upon which it becomes final, the Board shall suspend the operator's or chauffeur's licence issued to the person against whom the judgment is rendered and the registration of every motor-vehicle registered in his name. Judgment must be satisfied before licences are reinstated and the person so liable must give proof of financial responsibility for future motor-vehicle accidents in the amount of \$11,000 for a period of three years.

The Automobile Accident Insurance Act was passed by the Legislature and placed on the Statutes during 1946 and provides collision insurance, personal injury insurance, and public liability and property damage insurance in the amounts as set forth in the said Act. Saskatchewan citizens are provided with insurance against death or personal injury resulting directly from motor-vehicle accidents. Every person is automatically provided with public liability and property damage insurance to the extent of the amount paid for personal injuries or property damage which is payable by the insurance office.

Administration.—Treasury Department, Highway Traffic Board, Revenue Building, Regina. *Legislation.*—The Vehicles Act (R.S.S. 1951, c. 85).

Alberta.—In 1947, the Alberta Legislature passed the Automobile Accident Indemnity Act (later the title was amended to the Motor Vehicle Accident Indemnity Act), the main provisions of which are: the suspension of the licences of all drivers directly or indirectly involved in an accident which results in bodily injury, or in property damage exceeding \$75 in value (changed from \$25 in 1949), if proof of financial responsibility on the part of the driver is not forthcoming; and an Unsatisfied Judgment Fund is set up on the basis of an annual fee of \$1, collected for each licensed motor-vehicle in addition to the regular registration fee. Action may be taken against the Superintendent of the Fund where a judgment for an amount exceeding \$100 has been obtained following a motor-vehicle accident, if the assets of the judgment debtor are insufficient to meet the award of the court, or in cases where the driver or owner of the motor-vehicle causing the accident is unknown. Minor amendments were made to this legislation in 1948 and 1949.

Administration.—Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton, and the Highway Traffic Board, Department of Highways, Edmonton. *Legislation.*—The Vehicles and Highway Traffic Act (R.S.A. 1942, c. 275) as amended, the Motor Vehicle Accident Indemnity Act (1947, c. 11) as amended, the Public Service Vehicles Act (R.S.A. 1942, c. 276), and Rules and Regulations. The Vehicles and Highway Traffic Act and the Motor Vehicle Accident Indemnity Act are administered by the Motor Vehicle Branch, Department of the Provincial Secretary, and the Public Service Vehicles Act by the Highway Traffic Board, Department of Highways.

British Columbia.—Financial responsibility legislation, which has been in effect in this Province since 1932, provides for the suspension of the driver and motor-vehicle licences on failure to pay judgments, for contravention of certain convictions in connection with speed and for offences under Section 285 of the

Criminal Code, etc. These suspensions remain in effect until the party concerned files proof of financial responsibility, which he is required to keep in full force and effect for a period of at least three years at which time he may be released under certain circumstances. In 1947, new legislation was enacted that added to the financial responsibility legislation already in effect, providing for the impounding of motor-vehicles that are involved in motor-vehicle accidents, and for which, at the time, a motor-vehicle liability insurance card or a financial responsibility card cannot be produced, and the suspension of licences until proof of financial responsibility is given and other security or satisfaction of claims is given for damages or injuries caused.

Administration and Legislation.—Enforcement of the Motor Vehicle Act, the Highway Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the Municipal Police, Victoria, while the Highway Act is administered by the Minister of Public Works, the Motor Carrier Act by the Public Utilities Commission, and the Motor Vehicle Act by the Superintendent of Motor Vehicles.

Yukon Territory.—*Administration.*—Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Northern Administration and Lands Branch, Department of Resources and Development, Ottawa. *Legislation.*—The Motor Vehicle Ordinance (1947, c. 2) as amended.

Northwest Territories.—*Administration.*—Commissioner of the Northwest Territories. Address communications to the Director, Northern Administration and Lands Branch, Department of Resources and Development, Ottawa. *Legislation.*—The Motor Vehicles Ordinance, assented to Nov. 30, 1950, as amended.

Section 2.—Roads and Highways

The figures of Table 1 include the mileages of all roads under provincial jurisdiction, those in the National Parks, local roads in the Atlantic Provinces, Ontario and British Columbia and estimates of local roads in the three Prairie Provinces. There are great stretches of country in Newfoundland, the northern portions of Quebec, Ontario, the Prairie Provinces and British Columbia with very few people and very few roads, but the more extensively populated portions are well supplied. The Northwest Highway System (the Alaska Highway), built for military purposes during 1942 and extending 1,600 miles from Fort St. John, B.C., to Fairbanks, Alaska, serves civilian as well as military traffic. It opens up a vast area of hitherto virgin territory and affords a means of all-weather land communication from Alaska through Canada to the United States. Completed in 1949, the MacKenzie Highway which runs 386 miles from Grimshaw, Alta., to Hay River, N.W.T., has been of great value in the development of the Great Slave Lake region and the entire Mackenzie River Valley.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1951, the total number of miles of street reported was 14,855, composed of 4,081 miles of bituminous pavements, 860 miles of portland cement concrete, 2,784 miles of bituminous surfaces, 3,532 miles of gravel and crushed stone and 110 miles of other surfaces; making a total of 11,367 miles of surfaced streets and 3,488 miles of earth roads. These figures for urban streets or roads are not included in Table 1.

1.—Mileage of each Type of Road, by Province, as at Mar. 31, 1952

NOTE.—The figures for Canada are the sums of the mileages so reported. Urban streets are not included in the figures.

cludes 56,896 miles of unimproved road allowances not in use.

² Includes all road allowances.

³ In-

Finances of Road Transportation.—The cost of road transportation to the people of Canada may be summarized under the following headings: expenditure on roads and highways; expenditure by individuals and corporations on owned motor-vehicles; expenditure for freight and passenger services rendered by public motor-carriers such as taxi, bus and motor-transport companies; and expenditure on garages, service stations, etc. Since expenditure on roads and highways is made almost entirely by government bodies, fairly complete statistics are available regarding them but, owing to the tremendous number of individuals and organizations that would have to be canvassed and the difficulties involved, complete statistics are not available under the other headings. Sales of gasoline are given at p. 814 and revenue of motor-carriers at p. 815.

Expenditure on Roads and Highways.—Roads in Canada, except in the Territories, the Indian reserves and the National Parks, are under the jurisdiction of either provincial or municipal authorities.

Provincial and municipal expenditure was sharply curtailed during the war years 1939-45 and a considerable backlog of essential repair, improvement and expansion work accumulated. In 1946, approximately \$144,469,000 was expended on construction, general maintenance and repair of roads and bridges and from 1947 to 1951 outlays increased steadily, amounting to \$232,514,000, \$268,250,000, \$270,170,000, \$277,914,000 and \$334,584,000, respectively, in those years. Unit costs per mile of new construction increased over pre-war levels and had a restrictive effect on the planned extension of first-class roads. However, the improvement and construction of the Trans-Canada Highway, as a main artery of interprovincial travel, is well under way as a joint responsibility of federal and provincial authorities.

¹ Figures shown for 1949 and 1950 are for fiscal years ended Nov. 30, 1948 and 1949; for 1951, for the 16-month period ended Mar. 31, 1951; and for 1952, for fiscal year ended Mar. 31, 1952. ² Figures shown for 1949 and 1950 are for fiscal years ended Oct. 31, 1948 and 1949; for 1951, for the 17-month period ended Mar. 31, 1951; and for 1952 for fiscal year ended Mar. 31, 1952.

³ Includes payments from railways re elimination of grade crossings, etc.: 1949, \$104,277; 1950, \$251,911; 1951, \$227,484; and 1952, \$683,313.

⁴ Includes contributions from Railway Grade Crossing Fund toward elimination of grade crossings, etc.: 1950, \$243,575; 1951, \$302,021; and 1952, \$759,696. The Federal Government also contributed \$121,310 toward grade separations, etc., on the Trans-Canada Highway during 1951.

⁵ Federal administrative costs only. ⁶ Includes federal administrative costs re Trans-Canada Highway: 1951, \$175,398 and 1952, \$282,652.

The Trans-Canada Highway System.—An outline of the legislation, specifications and construction of the joint federal-provincial project, the Trans-Canada Highway, with a map showing the proposed route in the eight provinces participating at that date is given in the 1951 Year Book, pp. 631-634.

The estimated mileage in 1953 for the eight original provinces entering the agreement with the Federal Government in 1950 and for Nova Scotia since May 15, 1952, are: Newfoundland, 610 miles; Prince Edward Island, 74; Nova Scotia, 310; New Brunswick, 388; Ontario, 1,412; Manitoba, 305; Saskatchewan, 414; Alberta, 292; British Columbia, 692; and the National Parks, 83; making a total of 4,580 miles.

Contractual commitments for the nine participating provinces with respect to new construction work on the Highway, during the period Dec. 9, 1949, to Mar. 31, 1953, amounted to \$95,856,072 of which the Federal Government's share was \$47,928,036. The amounts paid during this same period in respect of prior and new construction were \$3,146,031 and \$30,803,040, respectively. The on-site labour expended on the Highway during the period amounted to 2,018,757 eight-hour man-days.

The Highway through the National Parks is being constructed entirely with Federal Government funds and the amount of \$1,000,000 has been placed in the estimates for that purpose. Construction work commenced during 1952 and the 1953-54 program includes five miles of grading and sub-base course between Mile 4.2 and Mile 10.8 in Banff Park, Alta., and four miles of similar construction in Yoho Park, B.C.

Section 3.—Motor-Vehicles

Registration.—Automobiles were registered in Canada for the first time in 1904 and Ontario was the only province to issue licences in that year. New Brunswick began registering cars in 1905; Quebec, Saskatchewan and Alberta in 1906; British Columbia in 1907; Manitoba in 1908; Nova Scotia in 1909; Prince Edward Island in 1913; and Yukon Territory in 1914.

In 1905, only 565 motor-vehicles were registered in Canada but by 1915 the number had risen to 95,284 and by the end of the next decade to 724,048. With the exception of 1931-33, an annual increase was in evidence until 1941 when 1,572,784 motor-vehicles were registered. The number of commercial vehicles continued to increase during the war years but a considerable decline was shown in passenger cars owing to restrictions on manufacture and the rationing of tires and gasoline. However, post-war recovery was rapid, reaching a peak in 1952 when the total of 3,155,997 registrations included 2,296,479 passenger cars and taxis, 812,715 trucks and miscellaneous vehicles, 4,731 buses and 42,072 motorcycles.

3.—Motor-Vehicles Registered, by Province, 1943-52

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-35 are given in the 1937 Year Book, p. 668, and those for 1936-42 in the 1948-49 edition, p. 707.

Provincial Government Revenue from Motor-Vehicles.—The taxation of motor-vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government income. In every province, licences or permits duly issued by the provincial authorities are required for motor-vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. A sales tax on gasoline is also levied by each province and to Mar. 31, 1947, there was a federal gasoline tax of 3 cents per gallon but this was withdrawn on that date and most provincial sales taxes were increased to absorb the federal rate. The rates per gallon in effect in 1953 were: for Newfoundland 14 cents; the Provinces of Prince Edward Island, New Brunswick and Quebec 13 cents; Nova Scotia 15 cents; Ontario 11 cents; Manitoba 9 cents; Saskatchewan 11 cents from April 1953; Alberta and British Columbia 10 cents; Yukon Territory 6 cents; and the Northwest Territories one cent from April 1953. The more important sources from which provincial revenue from motor-vehicles is derived are shown in Table 6. Federal Government revenue from import duties, excise and sales taxes are given in Chapter XXIII.

Bus operator

Sales of Gasoline.—Sales during the war years were, of course, materially affected by rationing; the yearly increases since that period have resulted from the removal of restrictions and the great increase in motor-vehicle registrations.

¹ Estimated net sales for Newfoundland, amounting to 7,188,000 gal. in 1949, 8,842,000 gal. in 1950, and 10,816,000 gal. in 1951, are included in net totals; gross sales are not available.

Motor-Carriers.*—The lack of statistical information regarding commercial traffic on the highways led to the institution, in 1941, of a census of motor-carriers. The carriers are divided into two classes: passenger and freight. Each of these is subdivided into (a) carriers with annual revenue of \$20,000 or over; (b) carriers with revenue of \$8,000 to \$20,000; and (c) carriers with revenue under \$8,000. Bus companies handling urban traffic, exclusively, are compiled as a class. Many street-railway systems operate motor-buses, but the statistics of such systems are not included here; they are included in electric-railway statistics. Licensed carriers doing highway construction work, building air-fields, etc., are excluded from the compilations. Taxi operators and urban delivery trucks are also excluded, except where their operations include inter-urban business. Carriers operating as both passenger and freight carriers are classed as passenger or freight according to the preponderance of the revenue. The passenger revenue of trucking companies and the freight revenue of bus companies are small percentages of their respective total revenue.

* Statistics are given in more detail in DBS annual report, *Motor Carriers, Freight-Passenger*.

Table 9 shows the freight and passengers carried by motor-carriers in 1949 and 1950. Traffic data were not available for the majority of the small operators. Many truck operators failed to report tons of freight carried and others reported only estimates so that these data are not complete. A difficulty in compiling weights is that much traffic is carried on a load or package basis and not on a weight basis. Records of passengers appear to be fairly complete, possibly because tickets are sold and accounted for, and the unit is not so complex as for freight carried.

Motor-Vehicle Accidents.—Motorists are required by law to report accidents but complete statistics of these accidents are not available for all provinces. The Dominion Bureau of Statistics compiles statistics on all deaths from motor-vehicle accidents and these are shown in Table 10. A direct comparison of such statistics between the provinces is of little value owing to differences in size, population, motor-vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor-vehicles has also been tabulated. These data still give no weight to differences in use of motor-vehicles, variations in climate, road conditions, tourist cars, etc., all of which are factors in accidents, but it is apparent that more safety education is required in all provinces.

Table 11 shows the number of persons killed or injured in automobile accidents as reported by the motor-vehicle branches of the provincial governments. It is possible that the latter reported some persons as injured who subsequently died from injuries and these would be included in the fatalities of the vital statistics shown in Table 10; also, accidents that occurred late in December and resulted in deaths would be charged to December by the provincial authorities but to January of the next year in the vital statistics data. Consequently, the figures of fatalities of Tables 10 and 11 are not in complete agreement.

10.—Deaths Resulting from Motor-Vehicle Accidents, by Province, 1942-51

NOTE.—This table was compiled in the Health and Welfare Division, Dominion Bureau of Statistics. Figures for 1926-35 will be found in the 1941 Year Book, p. 578, and those for 1936-41 in the 1948-49 edition, p. 712.

PART IV.—WATERWAYS*

The Canada Shipping Act.—Legislation regarding all phases of shipping is consolidated under the Canada Shipping Act (R.S.C. 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping. The Canada Shipping Act is a comprehensive

* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services, by the Department of Transport and the National Harbours Board; part of the financial statistics, by the Department of Public Works; shipping subsidies, by the Director of Subsidized Steamship Services, Canadian Maritime Commission; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic and statistics of shipping, by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

piece of legislation embracing features of international agreements as well as of British and previous Canadian legislation. A brief summary of the Act is given in the 1938 Year Book, pp. 680-682.

Section 1.—Shipping Facilities and Traffic

The developments and equipment to facilitate water traffic are classified under the headings of shipping, harbours, canals and aids to navigation. Subsection 5 gives information regarding pilotage service, steamship inspection, and personnel shipped and discharged.

Under the Terms of Union of Newfoundland with Canada, the extensive marine services and facilities of that Province were incorporated with those provided by the Federal Government.

Subsection 1.—Shipping

All waterways including canals and inland lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that the commerce of Canada is not dependent entirely upon Canadian shipping. However, a large part of the inland and coastal traffic is carried in ships of Canadian registry.

Canadian Registry.—Under Part 1 of the Canada Shipping Act, every ship included under the definition of "British Ship" given in Sect. 6 of the Act and controlled as to management and use in Canada must be registered in Canada, unless registered elsewhere in the Commonwealth. An exception is made in the case of ships not exceeding 10 tons register and engaged solely in coastal or inland navigation. A ship which should be registered, and which is not registered in any part of the Commonwealth, is not entitled to the privileges accorded to British ships.

1.—Vessels on the Canadian Shipping Registry, by Province, as at Dec. 31, 1950-52

NOTE.—Figures for 1935-49 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Shipping Traffic.—A brief description of the early development of Canadian shipping is given in the 1941 Year Book, pp. 597-598. Complete statistics, comparable with those given for the railways, showing all the freight carried by water, are not available. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors and of cargoes of vessels

trading between Canadian and foreign ports. Each vessel visiting a customs port or outport makes a statistical return which is forwarded to the Dominion Bureau of Statistics. Coastwise cargo has been reported from Jan. 1, 1952.

Reports are not made for vessels of less than 10 registered net tons and the tonnage of tugs is the gross ton and not the net ton used for cargo vessels. Fishing vessels are not required by customs regulations to report when operating from certain ports; consequently, the data are not on the same basis as data for cargo vessels.

2.—Vessels Entered at Canadian Ports,¹ 1943-52

NOTE.—Figures for the years ended Mar. 31, 1929-35, are given in the 1941 Year Book, p. 597, and for 1936-42 in the 1948-49 edition, p. 733.

Subsection 2.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Facilities may include cold-storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil-storage tanks and, in the chief harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Seven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours that are under the direct supervision of the Department of Transport. These harbours are administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 131 of these harbours, their remuneration being made from fees levied on vessels under the terms of the Canada Shipping Act.

At most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil, sugar industries, etc. At a number of ports there are also dry docks that are dealt with separately (see p. 825).

5.—Facilities of the Six Principal Harbours, as at Dec. 31, 1952

NOTE.—The facilities include those under the control of other agencies as well as those of the National Harbours Board at these ports.

National Harbours Board.—A description of the origin and functions of the National Harbours Board is given in the 1940 Year Book, pp. 679-681. The Board is responsible for the administration and operation of the following properties (representing a capital investment of approximately \$232,000,000): port facilities such as wharves and piers, transit sheds, grain elevators, cold-storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal. Operating revenue and expenditure for these properties are given in Table 29, pp. 844-845.

Harbour Traffic.—The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded on or unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually, the volume coming in and going out by coasting vessels is larger. Then there is the in-transit movement in vessels that pass through the harbour without loading or unloading. Finally, there is the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled in all the ports and harbours of Canada, as many of them are small and without the staff necessary to obtain a detailed record of freight handled. The National Harbours Board reports annually the water-borne cargo loaded and unloaded at the eight ports under its control. Six of these are among the principal ports of Canada and the cargo handled in each is shown in Table 6. The figures include freight carried by coasting and inland international, as well as by sea-going shipping; they include all cargo loaded or unloaded whether by facilities under the Board or at private docks and terminals in these ports. Cross-harbour movements, ballast (non-revenue), bunkers, ships' stores, mail and passengers' baggage are excluded.

Dry Docks.—The Department of Public Works of the Federal Government has constructed five dry docks, one at Kingston, Ont., two at Lauzon, Que., and two at Esquimalt, B.C. The dock at Kingston is under lease to the Kingston Shipbuilding Company. The old Esquimalt dry dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934, and, when commercially required, it will be returned to the control of the Department of Public Works. Each of the larger dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided for use of small vessels; the larger Lauzon dock cost approximately \$4,500,000 and the larger Esquimalt dock approximately \$7,000,000.

7.—Dimensions of Graving Docks Owned by the Federal Government

Location	Length	Width at—			Depth of Water on Sill	Rise of Tide

¹ Subsidy payments have been completed.

² 28 ft. over blocks.

³ Over sill (H.W.).

Subsection 3.—Canals

The canals and canalized waters of Canada, under the jurisdiction of the Department of Transport, comprise a series of waterways providing navigation for 1,875 miles inland from salt water. The canals may be divided into two classes: (1) the main or primary canals on the St. Lawrence River and the Great Lakes, including the Lachine, Soulanges, Cornwall and Williamsburg Canals on the St. Lawrence River, the Welland Ship Canal between Lakes Ontario and Erie, and the Sault Ste. Marie Canal between Lakes Huron and Superior; and (2) subsidiary or secondary canals including the St. Peters Canal between Bras d'Or Lake and the Atlantic Ocean, Cape Breton, the St. Ours and Chambly Canals on the Richelieu River, the St. Anne, Carillon and Grenville Canals on the Ottawa River, the Rideau Canal between the Ottawa River and Lake Ontario, and the Trent and Murray Canals between Lake Ontario and Georgian Bay.

The importance of this transportation system as a highway of commerce is evidenced by the fact that, during 1952, 31,354,139 tons of freight passed through, surpassing the peak reached in 1951 when freight traffic amounted to 29,325,344 tons and comparing with 24,636,462 tons in 1938. In 1952, 26,322 vessels passed through the canals compared with 25,548 in 1951.

In addition to freight and passenger vessels there are thousands of pleasure craft locked through the canals. The number of passengers on vessels locking at Sault Ste. Marie was 97,452 in 1952 as compared with 88,153 in 1951.

Revenue from canals during the year ended Mar. 31, 1953, amounted to \$1,532,210, of which \$1,196,106 was derived from rentals for hydraulic and land privileges and wharfage. In the previous fiscal year the total revenue was \$1,502,232, with rentals and wharfage amounting to \$1,231,774.

The names of the various canals along these routes, their locations and lengths, together with the numbers and dimensions of the locks thereon and other information may be found in the Department of Transport Bulletin, *Canals of Canada*.

Under the jurisdiction of the Federal Department of Public Works are the St. Andrews Lock (length, width and draught, respectively, 215, 45 and 17 ft.) at Selkirk on the Red River, Man., and the lock at Poupore, Que. There are also a few small isolated locks, each controlled under the authority of the province in which it is situated.

9.—Lengths of Channels and Dimensions of Locks under the Control of the Department of Transport, as at Dec. 31, 1952

St. Peters.....	St. Peters Bay to Bras d'Or Lake, Cape Breton, N.S.....	0-50	1	300	47-4	18 ^c

¹ Navigable depths are occasionally less at times of extremely low water. ² Minimum depth between locks 23 ft. 6 in. ³ Notice must be given by vessels of more than 6 ft. draught. ⁴ Marine railways in this section limit navigation to vessels 50 ft. long, 13-5 ft. beam, 4 ft. draught—weight not over 15 tons. ⁵ Minimum depth of canal with Lake Ontario at elevation 244 ft. above sea level is 9-5 ft. ⁶ The depth of canal prism is 17 ft.

Canal Traffic.—The canals of Canada are open to the vessels and traffic of all nations upon equal terms and thus United States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship Canal. This is shown in Tables 10 and 12. More complete details of the traffic through canals may be found in DBS annual report, *Canal Statistics*.

10.—Traffic through Canadian Canals, by Nationality of Vessel and Origin of Freight, Navigation Seasons, 1943-52

NOTE.—Figures include duplications where cargoes use two or more canals. Figures from 1886 are available in the corresponding table of previous Year Books beginning with the 1902 edition.

¹ Figures for the United States include small amounts of traffic from other foreign countries.

The figures in Tables 11 and 12 include duplications where the same freight passes through two or more canals, but in Table 13 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian lock at Sault Ste. Marie have been eliminated wherever possible.

Grain trans-shipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne, Ont., or other trans-shipping port.

¹ Through both Canadian and United States locks at Sault Ste. Marie.

Traffic through the Sault Ste. Marie canals, Canadian and United States, has been approximately twice as heavy as the traffic through the Panama Canal during the latest ten years for which records are available and in 1940 it was almost three times as heavy. Canal traffic has varied from 20,484,000 tons in 1932, which was less than the Panama traffic, to 120,200,814 tons in 1942. The dominant traffic, from a tonnage aspect, is iron ore and during the past 50 years this has fluctuated from 4,901,000 tons in 1892, an average of 50,000,000 tons in the 1920's, a low of 3,607,000 tons in 1932, to a peak of 94,326,578 tons in 1942. Although wheat ranks third in tonnage, its value over the past quarter-century has been greater, generally, than that of either iron ore or coal.

Other grains have been about one-quarter to one-fifth of the wheat tonnage and a smaller ratio of the value.

Soft coal has usually been second in volume to iron ore, increasing from 8,676,297 tons during the 1949 season to 13,301,048 tons in 1950; there was a decline, however, to 10,684,734 tons in 1951 and 9,901,211 tons in 1952.

The Panama Canal.—The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, has been a waterway of great importance to the ports of British Columbia, from which vessels leave direct for United Kingdom and other European ports throughout the year. As an alternative route to that of the trans-continental railway lines, this water passage is of vital importance in the solution of

the larger transportation problems of the Continent. During World War I, the great expectations based upon the opening of the Canal were not realized, owing to the scarcity of shipping. However, with the post-war decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage, nevertheless, assumed considerable proportions. During World War II, the volume of Canadian traffic through the Canal was greatly reduced.

CANALS OF THE ST. LAWRENCE WATERWAY*

The St. Lawrence Waterway, with its ship channel and system of canals, provides a great artery of navigation from the Atlantic Ocean to the western end of Lake Superior, a distance of more than 2,000 miles, constituting the world's greatest inland navigation system.

This great waterway services a vast drainage system covering an area of 678,000 sq. miles, 493,000 of which are in Canada and 185,000 in the United States. It includes Lake Ontario, Lake Erie, Lake St. Clair, Lake Huron, Lake Michigan and Lake Superior, together with all the tributary rivers and streams, the most

* Prepared by the Information and Editorial Bureau, Department of Transport, Ottawa.

important of which are the St. Lawrence River, the Ottawa River, the St. Maurice River and the Saguenay River. The height of land in Canada at the northern limit of this drainage area averages about 1,800 ft. above sea level.

The St. Lawrence-Great Lakes waterway overcomes a difference of 600 ft. in five steps to provide navigation for through shipping. (1) From the sea to Montreal—the portion that lies wholly in Canadian territory and in which there is a rise of 20 ft. (2) The St. Lawrence River section—including the Lachine section, the Soulanges and Lake St. Francis section and the International Rapids section where the rise is 225 ft. (3) Niagara Falls—separating Lake Ontario from Lake Erie and having a rise of 326 ft. (4) The Detroit–Lake St. Clair passage—joining Lake Erie and Lake Huron where there is a rise of 8 ft. (5) St. Mary's Falls—lying between Lake Huron and Lake Superior where there is a rise of 21 ft.

For navigation, Canada has spent \$300,000,000 to provide a dredged channel of 35 ft. to Montreal; a 14-ft. canal system between Montreal and Lake Ontario; a 25-ft. canal between Lake Ontario and Lake Erie; and a lock at Sault Ste. Marie. The United States has provided locks at the Sault and dredged channels between Lake Huron and Lake Erie. Canada has developed her facilities to enable wheat from the Prairies to move from the head of the Lakes by water to the sea and thus, to provide an alternate route to European markets to that via the United States through the Erie Canal and the Hudson River to New York city.

The development of the St. Lawrence as a highway of international trade has involved a series of engineering projects in keeping with the increasing demands of traffic and the safety of larger and faster ships. Originally, the Gulf of St. Lawrence as far as Quebec was navigable for the largest ships afloat but sections of the route between Quebec and Montreal were restricted by a natural depth of $10\frac{1}{2}$ ft. at low water. Early operations consisted of the removal of this and other natural barriers, thus linking up the deeper sections of the river. Dredging operations between Quebec and Montreal began in 1844 and have continued through the years since then. The present ship channel above Quebec has a limiting depth of 35 ft. at extreme low water.

Lachine Canal.—Above Montreal the Lachine Rapids constitute the first barrier to upbound navigation. Early in the 18th century the Sulpician Order, under Dollier de Casson, attempted the construction of a canal to by-pass these rapids but, through lack of funds, the project was never completed. Construction of the first canal, lying along the same route, was begun in 1821 and was opened in 1825; it had seven locks and accommodated vessels of five-foot draught. The commercial growth of the country necessitated enlarging the canal and work was commenced in 1843 which, when completed in 1848, provided 16-ft. draught at two lower locks and 9-ft. throughout the remainder of the canal. In 1874, further enlargement of the canal began and, in 1885, the present canal was completed, having five locks 270 ft. by 45 ft., with a minimum depth at normal low water of 14 ft. The canal is 8.74 miles long, extending from the Port of Montreal to Lake St. Louis at the city of Lachine, and overcomes a drop of 46.24 ft. in the level of the river.

Beauharnois Canal.—Before the Beauharnois Canal was built to provide navigation between Lake St. Louis and Lake St. Francis, navigation was effected by means of four short canals built by the Royal Engineers during the latter part of the 18th century and designed for the passage of boats capable of carrying 30 bbl. of flour. Between the years 1800 and 1805 the two lower canals were superseded by the

Cascades Canal across the point between the Ottawa and St. Lawrence Rivers, having three locks, 120 ft. by 9 ft. with 6 ft. of water on the sills. With this and other improvements boats loaded with 100 bbl. of flour could be accommodated. In the course of time, these canals were found inadequate and, in 1842, construction was started on the Beauharnois Canal on the south side of the river. It was completed in 1845 and had nine locks, 200 ft. by 45 ft. with a draught of 9 ft. Although it has not been used for navigation since 1902, its dams control the levels of Lake St. Francis for navigation and other purposes.

Soulanges Canal.—Construction of the Soulanges Canal, built to replace the Beauharnois Canal, began in 1892 and was completed in 1899. It is 14.67 miles long and provides 14-ft. navigation from Lake St. Louis to Lake St. Francis, with a lift of 83.50 ft.

Cornwall Canal.—This canal was built to pass the Long Sault Rapids and extends from Cornwall to Dickinsons Landing. Construction to provide 9-ft. draught began in 1834 and was completed in 1842. The work of enlarging the canal to 14-ft. draught was started in 1876 and completed in 1904. This canal overcomes a 48-ft. difference in the levels of the river, is 11 miles long and has six locks, 270 ft. by 45 ft.

Williamsburg Canals.—The Farran's Point, Rapide Plat and Galop Canals are collectively known as the Williamsburg Canals; they have a total lift of 31.27 ft. The Farran's Point and Rapide Plat Canals were constructed to overcome rapids of the same names, and the Galop Canal by-passes the Pointe aux Iroquois, Point Cardinal and Galop rapids. The construction of these canals began in 1844 and the first two were completed in 1847 to provide 9-ft. draught. The Galop Canal experienced a number of changes before reaching its present condition. There were at first two distinct canals, one to avoid the Iroquois Rapid and the second to avoid the Galop Rapid. After a few years' experience, it was found that the Iroquois Canal was not deep enough and it was decided to connect it with the Galop Canal. Work was begun in 1851 and completed in 1856. These canals were subsequently enlarged to 14-ft. draught.

Welland Canal.—This important waterway, which overcomes the fall of 326 ft. on the Niagara River, connects Lake Ontario and Lake Erie. The original canal, built by a private company and opened in 1829, extended from Port Dalhousie on Lake Ontario to the town of Port Robinson, where a connection was made with the Welland River. The course was down this river to its junction with the Niagara River and thence to Lake Erie. This was not found satisfactory, so between the years 1831 and 1833 the canal was extended along a route from Port Robinson to Port Colborne. In 1841 the Government of Upper Canada purchased the canal and began to enlarge its capacity to provide for 9-ft. navigation. The new canal was opened in 1845. In 1871 a canal commission recommended the further enlarging of this canal and work was begun in 1873. By 1887, the Third Welland Canal was completed, providing a draught of 14 ft. Its northern terminus was at Port Dalhousie and its route extended in a southerly direction, climbing the escarpment at Thorold, and thence generally following the route of the Second Canal to Port Colborne.

The tremendous growth of the eastern movement of grain and iron ore and the western movement of coal necessitated the construction of vessels of much larger dimensions than the limiting dimensions of the Welland and St. Lawrence Canals.

To accommodate this shipping, Canada began, in 1913, the construction of the Fourth Welland Canal as a Ship Canal. Construction was suspended early in 1916 because of a shortage of material and manpower but was resumed in 1919 and the canal was formally opened on Aug. 6, 1932. The canal crosses the Niagara Peninsula in an almost straight north-south line, with Port Weller at the Lake Ontario end and Port Colborne at the Lake Erie end. It is more than 27 miles long and has eight locks constructed to give 30 ft. of water over their sills; all concrete structures were constructed for this depth. The canal itself, however, was finished to a depth of 25 ft. but the remaining depth may be readily dredged without hindering navigation whenever deepening becomes advisable.

Sault Ste. Marie Canal.—The Canadian lock at Sault Ste. Marie was constructed to overcome a mean difference in level of 19 ft. from the foot of the falls to Lake Superior. The first canal was constructed by the Northwest Fur Company in 1797 but was destroyed by the United States Army in 1814. No new lock was constructed until 1853-55, when one was built on the United States side of the river. This has since been superseded by four modern locks, constructed at intervals between the years 1870 and 1943. The existing Canadian canal was constructed between 1887 and 1895 and consists of a single lock, 900 ft. by 60 ft., with a minimum depth of water on sills of 18 ft. 3 inches.

Subsection 4.—Aids to Navigation

Included under aids to navigation are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours—a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under Marine Services at p. 836. As a further aid to safe navigation, there are chains of radio signal and direction-finding stations which are described under radiotelegraphy at pp. 883-884. Lists of aids to navigation, with the exception of very minor ones, are published by the Department of Transport.

16.—Marine Danger Signals maintained in Canada, Years Ended Mar. 31, 1947-53

NOTE.—In addition to the aids to navigation listed, approximately 9,006 unlighted buoys, balises, dolphins and beacons are maintained. A table showing marine danger signals maintained during the years ended Mar. 31, 1929-40, is given in the 1941 Year Book, p. 581. Figures for 1942 will be found in the 1948-49 edition, p. 716, and for 1943-46 in the 1950 edition, p. 766.

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Ice-breaking operations are carried on at the beginning and at the end of winter to prolong the season of navigation in important waters that freeze over—particularly in connection with sea-going shipping from Montreal—and to prevent flood conditions during the spring ice break-up.

River St. Lawrence Ship Channel.—This channel extends from about 40 miles below Quebec city to the foot of Lachine Canal at Montreal, a distance of 200 miles of which about 113 miles is dredged channel.

The first minor development began in 1844, on Lake St. Peter, where the limiting depth was $10\frac{1}{2}$ feet at low water. Since 1851, progress in deepening and widening the original natural channel has been more or less continuous through a series of improvement projects in keeping with the increasing demands of trade and the safety of larger and faster vessels.

The present ship channel above Quebec has a limiting depth of 35 feet (opened in 1952) at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points. This section comprises about 100 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 13 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route.

The latest improvement project (1952) comprises the further widening of critical sections and the provision of additional anchorage and turning areas. Annual maintenance requirements due to siltation in this dredged channel are relatively minor above Quebec. Below Quebec siltation is more pronounced owing to tidal action.

The ship channel is well defined by buoys, and the centre by range lights permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December.

The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the entire St. Lawrence waterway from Cape Race and Belle Isle to Fort William (over 2,000 miles) are recorded and made available to all concerned through a series of reporting stations known as the Government Signal Service.

A fleet of ice-breaking vessels is maintained to facilitate the movement of shipping between Montreal and the sea during the opening and closing of navigation, as well as to alleviate flood conditions in low-lying areas.

17.—Seasons of Open Navigation on the St. Lawrence Ship Channel, 1934-53

NOTE.—Figures from 1882 are given in the corresponding table of previous Year Books, beginning with the 1934-35 edition.

¹ "Channel Open" means the route can be navigated although there may be floating ice in the river.

Subsection 5.—Marine Services of the Federal Government

The services covered in this Subsection are those dealing with steamship inspection, pilotage service, sea-faring personnel, and the operations of the Canadian Government Merchant Marine Limited and the Canadian National (West Indies) Steamships Limited.

Steamship Inspection.—The Steamship Inspection Service, provided for under Part VII of the Canada Shipping Act, 1934, consists of a headquarters staff at Ottawa and staffs of inspectors at the principal ocean and inland ports. The Board of Steamship Inspection decides on questions arising out of the administration of the Act. The Service is responsible for the administration and carrying out of the provisions of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading or unloading ships; and also for the administration and carrying out of the provisions relating to the certification and employment of marine engineers.

Pilotage.—Pilotage service functions under the provisions of Part VI of the Canada Shipping Act, 1934. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district.

There are in Canada 42 pilotage districts in nine of which the Minister of Transport is the pilotage authority (*see* Table 19), while in each of the other districts the pilotage authority is a local body appointed by the Governor in Council.

19.—Pilotage Service by Districts, Years Ended Mar. 31, 1951 and 1952

In addition, there are 21 districts in the Province of Newfoundland under local pilotage authority. These districts are administered under Newfoundland statutes which, since the date of union with Canada, come under federal jurisdiction. Part VI of the Canada Shipping Act with respect to pilotage has not been proclaimed in force in Newfoundland.

Seamen Shipped and Discharged.—Seamen shipped and discharged at Canadian ports under the provisions of the Canada Shipping Act, 1934, during the years ended Mar. 31, 1943-52, are shown in Table 20.

20.—Seamen Shipped and Discharged at Canadian Ports, Years Ended Mar. 31, 1943-52

NOTE.—Figures from 1918 are given in the corresponding table of previous Year Books beginning with the 1941 edition. Figures for Newfoundland are included from Apr. 1, 1949.

Canadian Government Merchant Marine Limited.—The circumstances under which the Canadian Government became possessed of, and responsible for, the operations of a merchant marine are explained in the 1934-35 Year Book, p. 776. A table showing the operating results from 1919 to 1936 is given in the 1937 Year Book, p. 689.

The original fleet of the Canadian Government Merchant Marine Limited consisted of 66 vessels with a total deadweight tonnage of 391,212. The original cost of the fleet was \$79,661,921 and the capital loss thereon was \$74,239,356. The total capital recovery of \$5,422,565 was as follows: (1) the sale of 56 vessels for \$2,378,018; (2) the proceeds of insurance on four vessels lost, amounting to \$2,111,475; and (3) the sale of six vessels for \$933,072 to the Canadian National (West Indies) Steamships Limited.

The charter of the Canadian Government Merchant Marine Limited and its subsidiary companies, although inactive since 1936, was not surrendered and, in 1940, the Company was reconstituted and is operating, on behalf of the Canadian Government, certain ships seized in prize and either requisitioned for use by the Canadian Government or condemned by the Court. Settlement with the owners of requisitioned ships for charter hire has not been completed.

Canadian National (West Indies) Steamships Limited.—In conformity with the Canada-West Indies Trade Agreement of 1926 (16-17 Geo. V, c. 16) the Federal Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships Limited.

At the end of 1953, the Canadian National Steamships owned and operated eight vessels in service between Canada and the British West Indies.

21.—Financial Statistics of Canadian National (West Indies) Steamships Limited, 1943-52

NOTE.—Figures for the years 1929-38 are given in the 1942 Year Book, p. 620, and for 1939-42 in the 1950 edition, p. 777.

Subsection 6.—The St. Lawrence Seaway and Power Project

The St. Lawrence seaway project envisages the extension of deep-draught navigation from Montreal, Que., to the head of the Great Lakes. A depth of 27 ft. has been settled upon, whereas at present only 14 ft. is provided in the St. Lawrence Canals and 25 ft. in the Welland Ship Canal. In the channels connecting the upper lakes, the limiting depths are 25 ft. downbound and 21 ft. upbound.

Negotiations related to the matter have been carried on between Canada and the United States since the end of the 19th century. Power development in the international rapids section of the St. Lawrence River became a part of the project at an early date. The proposals were formalized in the St. Lawrence Deep Waterway Treaty of 1932, but this treaty was rejected by the Senate of the United States.

Renewed negotiations produced the Great Lakes-St. Lawrence Agreement of 1941 but it was never approved by the United States Congress and has since been superseded by a new plan for an all-Canadian seaway.

Canada's new plan involves the undertaking of the international power development by separate entities to be named by the respective federal governments (in Canada, The Hydro-Electric Power Commission of Ontario). Canada would build the canals in this section and complete the seaway from Montreal to Lake Erie.

The Canadian Parliament, late in 1951, enacted legislation for the establishment of the St. Lawrence Seaway Authority, a Crown company, to undertake the construction and operation of the navigational works of the project. Approval was given also to an agreement with Ontario respecting the power development. On June 30, 1952, separate applications by Canada and the United States were made to the International Joint Commission for approval of the key power works. The Commission's approval was given on Oct. 29, and on Nov. 4, 1952, Canada notified the United States that it no longer looked for ratification of the 1941 agreement.

The final step in authorizing the power project was taken on Nov. 5, 1953, when the President of the United States signed an executive order designating the New York State Power Authority as the United States entity to join with The Ontario Hydro-Electric Power Commission in construction and administration of the project. Assuming that pending (November 1953) court actions to halt the participation of New York State in the joint venture are unsuccessful, construction may begin in 1954.

Section 2.—Financial Statistics of Waterways

The principal statistics available of the cost of water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. In so far as capital expenditure for the permanent improvement of waterways is concerned, that of the Federal Government covers the major part. There has been some expenditure by municipalities on local harbour facilities, and private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine Limited and the Canadian National (West Indies) Steamships Limited, has come almost entirely from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.—The only figures available of federal capital expenditure on Canadian waterways are those compiled from the *Public Accounts* and the annual reports of the Departments of Transport, Public Works and Finance. However, such expenditure cannot be regarded as any indication of the present worth of the undertakings represented. The cost of building canals and other waterways and permanent works to facilitate water transportation in Canada is represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of earlier works which have been superseded, as for instance, in the first Welland Canals. To this extent such figures are an overstatement of the present value of the works

in use. There is a further limitation that should be noted in regard to such figures: they do not include the cost of maintenance and improvements or the operation of these works, such charges having been made to the consolidated deficit account as annual expenditure and not to capital account. Table 22, which shows capital expenditure on canals, marine services and miscellaneous water-transport facilities to have reached the grand total of \$425,089,977, must be interpreted with the above qualifications in mind. In Table 23, the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1951 and 1952, and are in addition to the capital expenditure of Table 22. Figures in Table 23 reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 22 in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they also have been subject to deductions for depreciation and the scrapping or abandonment of plant and hence more nearly approach the present value of the properties under the administration of the National Harbours Board.

Table 24 on p. 841 shows the amounts advanced by the Federal Government to the National Harbours Board for capital expenditure in 1950, 1951 and 1952.

Waterway Expenditure and Revenue on Consolidated Fund Account.—

Expenditure under this heading (Tables 25 to 27) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable.

In addition to the recurrent expenditure shown here, to facilitate water transportation, the Federal Government expends annually a considerable amount to cover deficits of the Canadian National (West Indies) Steamships Limited and of the National Harbours Board, for mail subsidies and steamship subventions as shown in Table 30. Operating expenditure and revenue of facilities administered by the National Harbours Board are shown separately in Table 29. The National Harbours Board operates as a statutory corporation. The improvement in the financial results since control was unified under the Board is indicated by the increase of consolidated operating income from \$2,452,000 in 1935 to \$8,110,876 in 1952. Revenue in connection with waterways of the Department of Transport and the Department of Public Works is shown in Table 28.

Canadian Maritime Commission.—By authority of an Act (R.S.C. 1952, c. 38) passed in the 1947 session of Parliament, the Canadian Maritime Commission was constituted for the purpose of examining into, keeping records of, and advising the Minister of Transport on matters pertaining to Canadian shipping and shipbuilding services.

In addition to these duties, the Act also empowers the Commission to:—

- (1) exercise and perform on behalf of the Minister such powers, duties and functions of the Minister under the Canada Shipping Act, 1934, as the Minister may require;
- (2) administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament; and
- (3) exercise or perform any other powers, duties or functions conferred on or required to be performed by the Commission by or pursuant to any other Act or order of the Governor in Council.

PART V.—CIVIL AIR TRANSPORTATION*

Section 1.—Administration and Development

Historical Developments.—Canada's aviation history dates back to 1909 when the *Silver Dart* piloted by Jack McCurdy (Hon. J. A. D. McCurdy, former Lieutenant-Governor of Nova Scotia) flew at Baddeck, N.S. This was the first aeroplane flight by a British subject in the British Empire.

* Sections 1 and 2 of this Part were revised in the Department of Transport and Section 3, except where otherwise indicated, in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics. For military air transportation, see Chapter on Defence of Canada.

There was little aviation development in this country until World War I. Following the War, many of Canada's wartime aviators assisted in developing air transportation services into inaccessible areas, air forestry patrols and inter-city air services. During this period, the flying clubs movement received Government assistance in the training of pilots and engineers required by Canada's civil aviation industry.

World War II was a period of intensive construction of airports and aerodromes to meet the requirements for training of airmen under the British Commonwealth Air Training Plan. At the end of the War, many Service-trained Canadian airmen turned to commercial flying and were absorbed in existing operating companies or helped to develop other flying services. Transatlantic air services, which were inaugurated by the Department of Transport during the War, were turned over to Trans-Canada Air Lines which came into being by Act of Parliament in 1937 to provide for the development of a government-controlled transcontinental air service for operation as regular scheduled operations. Canadian Pacific Air Lines was created by the amalgamation of small commercial operators for the servicing of Canada's northland. In 1949, the Canadian Pacific Air Lines was designated to provide transpacific services on behalf of Canada and began its scheduled operations from Vancouver to Australia and New Zealand in July of that year and to Japan, China and Hong Kong in September.

The Control of Civil Aviation.—The control of civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act, 1919, and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation, comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Controller of Civil Aviation under the supervision of the Director of Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain statutory functions with respect to the regulation of commercial air services. Part III of the Act deals with matters of government internal administration in connection with the Act.

Weather Services.—Weather services of the Meteorological Division of the Department of Transport have been broadened to meet the demands of aviation for weather information and forecasts at higher levels, over new areas and for extended routes. A Central Analysis Office has been established at Montreal, Que., and an Arctic Forecast Team at Edmonton, Alta. New machine methods are being used in processing weather data, and the network of surface and upper air observing stations has been expanded. Forty forecast offices were in operation in 1952, linked by teletype, radio teletype and an enlarging facsimile system. Arctic weather stations and a Pacific weather station 1,000 miles to the west of Vancouver, B.C., were maintained under international agreement.

Royal Canadian Flying Clubs.—At the end of 1952 there were 36 member clubs of the Royal Canadian Flying Clubs Association with an approximate membership of 4,000. During 1952, with 1951 figures in brackets, instructional hours flown totalled 59,252 (51,190), and the number of aircraft utilized for instructional purposes was 161 (140). The number of students instructed and graduated as private pilots was 796 (709), and 156 (116) graduated as commercial pilots.

Air Industries and Transport Association.—Commercial flying schools that are members of the Air Industries and Transport Association numbered 49 at the end of 1952 as compared with 44 in 1951. During 1952, with 1951 figures in brackets, the number of students instructed and graduated as private pilots was 723 (516), and the number graduated as commercial pilots, 215 (134). The number of instructional hours flown was 39,161 (33,063).

International Air Agreements.—The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada played a major part in the original discussions that led to the establishment of the International Civil Aviation Organization, generally known as ICAO, which has its headquarters at Montreal, Que. A special article on "The International Civil Aviation Organization and Canada's Participation Therein" appeared in the 1952-53 Year Book, pp. 820-827.

In recent years, Canada has been a signatory to agreements concerning civil aviation with: Australia and New Zealand; Belgium, Denmark, France, Germany, Ireland, Iceland, The Netherlands, Norway, Portugal, Sweden, South Africa, and the United Kingdom; and with the United States.

Section 2.—Air Services

Air Transport Services.—These services are grouped into two broad classes—Scheduled Services and Non-Scheduled Services.

Scheduled Services provide regular point-to-point service on scheduled advertised routes and Non-Scheduled Services include:—

- (1) Specific Point Services from a designated base to specific points on the basis of unit rates that may be undertaken as the traffic warrants and that are not on a time schedule;
- (2) Chartered Services operated on the basis of the private chartering of an entire aircraft for a specific trip;
- (3) Contract Air Services which operate on one or more specific contracts. These do not operate on a time schedule nor need the contractor take the entire space of the aircraft;
- (4) Specialty Air Services concerned with large-scale forestry and utility surveys according to some specific agreement.

Trans-Canada Air Lines.—Under an amendment to the Trans-Canada Air Lines Act, given Royal Assent on May 14, 1953, all property, rights, obligations and liabilities of Trans-Canada Air Lines (Atlantic), Limited, that existed prior to Jan. 1, 1952, were transferred to Trans-Canada Air Lines. As a result, computation of statistical information on the operations of both domestic and international operations of TCA have been computed for the year 1952 on an all-inclusive basis.

Trans-Canada Air Lines flew 14 p.c. more scheduled miles on all services in 1952 than in the preceding year. Flight frequencies were increased on a number of routes. On the transcontinental route, a fifth daily service was operated during the summer months. On the North Atlantic service, daily flights were operated in all months except November and December, while Caribbean schedules were increased during the winter season.

The first direct air service between Canada and Germany was inaugurated on Nov. 5 with an initial schedule of one round flight a week. This new service is calculated to serve also the air transport needs of Canadian troops stationed in

Germany. Improvements to domestic services included the extension of the *North Star* service from Montreal to Newfoundland, adding Fredericton, N.B., to the domestic route pattern, and the inauguration of a weekly flight from Montreal to Goose Bay, which had been previously serviced by North Atlantic operations.

TCA increased its domestic service for the winter months of 1952-53 by 8 p.c. over the corresponding season of 1951-52, reflecting the healthy trend of domestic confidence in air travel, due in no small measure to the operational dependability of the air line with its reputation of having completed 97 p.c. of all scheduled miles.

The unit cost of providing air transportation during the year decreased to 39.6 cents per available ton-mile owing to greater volume of business and increased productivity of staff and equipment.

During the year, the volume of passenger traffic increased by 20 p.c., freight and express by 30 p.c. and mail by 8 p.c. Operating revenues increased by 15 p.c. and operating expenses rose by 22 p.c. owing primarily to increased cost of operation and expenses incurred in carrying out the fleet expansion program.

Canadian Pacific Air Lines Limited.—This Company operates scheduled domestic services with a total of 9,525 route miles, and overseas services from Vancouver to Australia, New Zealand and the Orient, totalling 15,295 route miles. In addition, a regular passenger service between Vancouver, Mexico City and Lima, Peru was started on Oct. 24, 1953.

Domestic services are concentrated mainly in the western and northern regions of Canada, although daily service is flown in the Montreal-Quebec-Toronto area. The Company has five pressurized 40-passenger Convair-Liners operating on certain domestic routes.

Service on overseas lines has recently been greatly improved through the purchase of four Douglas Super DC-6B aircraft. These are four-engined transports with a normal seating capacity of 64 passengers but which are capable of carrying 82 tourist passengers if desired. The new aircraft are in use on the North and South Pacific routes.

Following are traffic statistics for the year 1952:—

<i>Item</i>		<i>Domestic</i>	<i>North Pacific</i>	<i>South Pacific</i>
Revenue miles.....	No.	5,942,627	2,229,113	464,665
Revenue passengers.....	No.	193,514	11,536	1,672
Revenue goods.....	lb.	5,817,470	89,493	3,438
Mail.....	lb.	2,122,596	54,418	3,036

Independent Air Lines.—In addition to Trans-Canada Air Lines and Canadian Pacific Air Lines, there are four other domestic air lines licensed to operate scheduled services in Canada. These are:—

Central Northern Airways Limited, Winnipeg, Man.
 Maritime Central Airways Limited, Charlottetown, P.E.I.
 Queen Charlotte Airlines Limited, Vancouver, B.C.
 Quebecair Incorporated, Mont Joli, Que.

Licensed domestic air carriers operating in Canada held valid operating certificates as at Dec. 31, 1952, covering 37 scheduled, 87 flying training, and 461 non-scheduled and specialty commercial air services.

Non-scheduled services are operated by the majority of the independent air lines. These services provide effective access to sections of Canada that are inaccessible by other means of transportation, and act as feeders to the scheduled air lines. They also provide specialty services such as recreational flying, aerial photography and survey, aerial pest control, and aerial advertising.

Commonwealth and Foreign Scheduled Commercial Air Services.—At the end of December 1952 there were 14 Commonwealth and foreign air carriers holding a total of 18 valid operating certificates covering international scheduled commercial air services operating into Canada, as follows:—

Air France (Compagnie Nationale Air France).—Operating between points in Metropolitan France and Montreal, Que., Canada, direct, or via Shannon, Ireland, Keflavik, Iceland, or The Azores and Gander, Nfld., Canada; and New York, N.Y., U.S.A.

American Airlines, Inc.—Operating between Toronto, Ont., Canada, and New York, N.Y., U.S.A./Newark, N.J., U.S.A., direct, or via Buffalo, N.Y., U.S.A.

- British Commonwealth Pacific Airlines, Ltd.*—The Canadian portion of the route between San Francisco, Cal., U.S.A., and Vancouver, B.C., Canada, of the Transpacific service between Sydney, N.S.W., Australia, and/or Auckland, New Zealand, and Vancouver, B.C., Canada.
- British Overseas Airways Corp.*—Operating between London, England, and Montreal, Canada, and between London, England, and New York, U.S.A., both routes via Prestwick, Scotland, or Shannon, Ireland, and Gander, Nfld., Canada; and between London, England; Gander, Nfld., Canada; Bermuda; Nassau, The Bahamas; and Montego Bay, Jamaica, B.W.I.
- Colonial Airlines, Inc.*—Operating (a) between the terminals Ottawa, Ont., Canada, and Montreal, Que., Canada, and New York, N.Y., U.S.A., via Burlington, Vt., U.S.A., and (b) between the terminals Ottawa, Ont., Canada, and Montreal, Que., Canada, and Washington, D.C., U.S.A., via Massena, N.Y., and/or Syracuse, N.Y., U.S.A.
- K.L.M. Royal Dutch Airlines.*—The Canadian portion of the route between the terminals Amsterdam, The Netherlands, and Montreal, Que., Canada; and the Canadian portion of the route between the terminals Montreal, Que., Canada, and Willemstad, Curaçao, Netherlands Antilles.
- Northeast Airlines, Inc.*—Operating between Montreal, Que., Canada, and Boston, Mass., U.S.A., via Burlington, Vt., Montpelier-Barre, Vt., White River Junction, Vt., (Lebanon Airport, N.H.), and Concord, N.H., U.S.A.
- Northwest Airlines, Inc.*—Operating between Winnipeg, Man., Canada, and Fargo, North Dakota, U.S.A.; and between Minneapolis/St. Paul, Minn., U.S.A.; Edmonton, Alta., Canada; Anchorage, Alaska, U.S.A.; and beyond.
- Pan American World Airways, Inc.*—Operating between Seattle, Wash., and Fairbanks, Alaska, via Juneau, Alaska, U.S.A. and Whitehorse, Y.T., with a refuelling stop at Port Hardy, B.C., and/or Comox, B.C.; and between New York, N.Y., Boston, Mass., U.S.A.; and Gander, Nfld., Canada; Shannon, Ireland; London, England; and beyond.
- Sabena (Société Anonyme Belge d'Exploitation de la Navigation Aérienne).*—Operating between Brussels, Belgium, and New York, N.Y., U.S.A., via Shannon, Ireland, and Gander, Nfld., Canada.
- Scandinavian Airlines System.*—Between Stockholm, Sweden; Oslo, Norway; Copenhagen, Denmark; Prestwick, Scotland; Gander, Nfld., Canada; and New York, N.Y., U.S.A.
- T.W.A. (Trans-World Airlines, Inc.).*—Operating between New York, N.Y.; Philadelphia, Penn.; Boston, Mass., U.S.A.; and Gander, Nfld., Canada; The Azores; Shannon, Ireland; London, England; Paris, France; Lisbon, Portugal; and beyond.
- United Air Lines, Inc.*—Operating between Vancouver, B.C., Canada, and Seattle, Wash., via Bellingham, Wash., U.S.A.
- Western Air Lines, Inc.*—Operating between Great Falls, Mont.; Cut Bank, Mont., U.S.A., and Lethbridge, Alta.; Edmonton, Alta., Canada; via Calgary and Penhold, Alta., Canada.

Section 3.—Civil Aviation Statistics

Ground Facilities.—Early ground facilities for civil aviation consisted chiefly of municipal or flying-club airports adjacent to the larger urban centres and of numerous terminals from which commercial flying services operated, mainly into the northern mining regions. These airports formed the nucleus of the chain of airports now operated by the Department of Transport. These airports and aerodromes have been progressively improved and enlarged to meet the requirements of larger and heavier aircraft. Instrument Landing Systems (ILS) designed to facilitate

safe landings under low visibility conditions have been installed at 17 airports. Twelve of Canada's civil airports are regular ports of call for international commercial air services.

3.—Aerodromes, by Province, as at Oct. 1, 1953

NOTE.—An aerodrome is defined by the Air Regulations 1951 as: a defined area on land or water (including any buildings, installations and equipment) intended to be used wholly or in part for the arrival, departure, movement and servicing of aircraft. This table was compiled by the Aeronautical Charting Section, Department of Mines and Technical Surveys, and the aerodromes included are in a usable condition.

Air Traffic Control, 1952.—The primary functions of Air Traffic Control are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled airspace and between aircraft and obstructions on the movement area of controlled airports. This is accomplished through provision of airport-control service and area-control service. In addition, the following services are provided: (a) flight information, (b) alerting for search and rescue, (c) customs notification and (d) aircraft identification.

Airport Control is designed particularly to provide air-traffic control service in the vicinity of major civil airports where the volume and type of aircraft operations, together with weather conditions and other factors, indicate its need in the interest of safety. The service includes the control of pedestrians and vehicles on the manoeuvring area of the airport. Control is effected by means of direct radio-telephone communication, or visual signals, to aircraft and surface vehicles on and in the vicinity of controlled airports. The two new control towers opened during 1952 at Seven Islands, Que., and Torbay, Nfld., brought to 21 the total number of controlled airports. Control towers are located at Patricia Bay and Vancouver, B.C.; Lethbridge, Calgary and Edmonton, Alta.; Saskatoon and Regina, Sask.; Winnipeg, Man.; Windsor, London, Toronto, Ottawa and North Bay, Ont.; Montreal, Cartierville, Quebec and Seven Islands, Que.; Moncton, N.B.; Sydney, N.S.; and Gander and Torbay, Nfld. Most of these control towers are in continuous operation but a few provide only 16-hour daily service.

Area Control is designed particularly to provide air-traffic control service to aircraft operating within controlled airspace during weather conditions that prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight. This service is provided by area-control centres at Vancouver, B.C.; Edmonton, Alta.; Winnipeg, Man.; Toronto, Ont.; Montreal, Que.; Moncton, N.B.; and Gander, Nfld. Each of these centres is connected to the control towers, radio range stations and operations offices within its control area by means of an extensive system of local and long-line interphone or radio circuits and through the radio communication facilities available at these offices to all aircraft requiring area-control service. Each area-control centre is similarly connected with the adjacent centres, including centres in the United States, for the purpose of co-ordinating the control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of the movements of all aircraft operating in accordance with the Instrument Flight Rules, and a general record of the movements of all aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area-control service to aircraft operating within the controlled airspace over Newfoundland, the Gander area-control centre provides this service within the airspace over approximately one-half of the North Atlantic.

Flight Information is designed to provide advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refuelling and transportation facilities and other related data of assistance to the pilot in planning or conducting a flight. This service is provided by all air-traffic control units but particularly by the area-control centres, which are made responsible for flight-information service in seven regions—for each of which one area-control centre is responsible.

Alerting for Search and Rescue is designed to ensure that the appropriate organizations are notified of aircraft in need of search and rescue aid and to otherwise assist such organizations as required. Area-control centres are responsible for notifying these organizations promptly of non-arrival at destination of any aircraft for which a flight plan or flight notification has been received. This requires the maintenance and constant supervision of a continuous record of active flights to ensure that non-arrival of any aircraft is detected immediately. The service is available to any pilot who files either a flight plan or a flight notification with any communications agency of the Air Services Branch of the Department of Transport or directly with one of the area-control centres or control towers.

Customs Notification Service is provided to facilitate the routine notification of the appropriate customs agency by pilots who plan to cross the Canada-United States boundary. Utilization is made of the air-traffic control communications system and units connected therewith for forwarding pilot requests to notify the customs officer at the airport of destination.

Aircraft Identification Service is provided by area-control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

Air Traffic Control employs 111 airport controllers, 74 area controllers, 84 air-traffic control assistants and a headquarters staff of six. The number of controlled aircraft operations in Canada during 1952 was 1,312,153—an increase of 35.5 p.c. over the preceding year. Of this total, 76 p.c. represented civil and 24 p.c. military operations. This was the first year that controlled operations exceeded 1,000,000.

Summary of Operation Statistics.—The statistics given in Table 4 show the remarkable increase in recent years in passenger freight and mail traffic.

4.—Summary Statistics of Civil Aviation, 1947-52

NOTE.—Figures from 1921 are given in the corresponding table of previous Year Books beginning with the 1924 edition.

¹ Excludes figures for non-commercial aviation.² Exclusive of passengers carried between foreign stations who are included in totals.³ Includes employees other than crews.⁴ Exclusive of charter services, figures for which are not available.⁵ Exclusive of freight carried between stations which is included in totals.⁶ Includes purchases made by foreign carriers in Canada.⁷ Old type.⁸ New type.⁹ New type of licence for air engineers.

Table 5 shows civil aviation figures for 1952 by type of service. For a definition of scheduled and non-scheduled carriers, see p. 848. Statistics for international carriers include traffic over Canadian territory for both Canadian and foreign operators; a small traffic across Canadian territory and between foreign stations is also included. Statistics for Canadian carriers operating international routes are included both as "international" and "Canadian" but duplications are excluded from the totals.

PART VI.—OIL AND GAS PIPELINES

Section 1.—Pipeline Construction

The first major pipeline in Canada, constructed from Edmonton, Alta., to the head of the Great Lakes, came into operation in 1950 and only since then has the pipeline become a significant means of transportation in Canada. The subject is being covered for the first time in the present edition of the Year Book and is being introduced by a special article covering the history and development of pipeline construction.

HISTORY OF PIPELINE CONSTRUCTION IN CANADA*

Early Pipelines in the United States.—The use of pipelines in North America is as old as the petroleum and natural gas industry. The history† of development in the United States shows that in 1825 at Fredonia, N.Y., gas from a well 27 ft. deep was transmitted through wooden logs to two stores in that village and used for gas lights in greeting General Lafayette. Also, in 1865, a well drilled 480 ft. deep at Bloomfield, N.Y., encountered natural gas which in 1870 was piped 25 miles to Rochester. The pipeline was made of white pine logs bored to about 8-inch inside diameter and turned down to about 12½-inch outside diameter, with joints of the bell and spigot type similar to those used for cast iron pipes.

The first iron pipeline of appreciable length was laid in 1872 and was of 2-inch inside diameter and 5½ miles long from a gas well at Newton to Titusville, Pa. The early pipelines were for relatively short distances only and, until 1890, were made of wrought iron with screw couplings. The size did not exceed 8 inches and the pipeline pressure was not more than 80 lb. per sq. inch.

High-pressure gas lines were first used in the United States in 1891 by the Indiana Natural Gas and Oil Company, when two parallel lines, each 8 inches in diameter, were built to transport gas 120 miles from gas fields in northern Indiana to Chicago, Ill., at an initial pressure of 525 lb. per sq. inch. The development of the mid-continent area led to the construction of a number of pipelines of substantial size and length and the tendency, with larger available reserves, was to build larger lines as being more economical for large markets.

Much interest was aroused during World War II by the building of the "Big Inch" (24-inch) line from Longview, Tex., to Phoenixville, Pa., a distance of 1,250 miles. It was designed to carry 300,000 bbl. of oil a day but after the War it was changed over to gas transmission. About the same time the "Little Big Inch" (20-inch) products line was built from Beaumont, Tex., to Bayonne, N.J., a distance of 1,485 miles, and carried 235,000 bbl. of refined oil products a day. These pipelines inaugurated an era of long-distance and large-diameter pipeline construction for the delivery of crude oil to the refineries and refined products to the markets. Many such lines have been built since that time, examples being the 24, 26 and 30-inch line of the El Paso Natural Gas Company from the Texas Panhandle to Los Angeles, a total distance of 1,200 miles, designed for pressures up to 850 lb. per sq. inch, and the Transcontinental Gas Pipe Line Corporation's 1,840-mile line from the Texas Rio Grande Valley to metropolitan New York, completed in 1950.

In the United States from 1939 to the end of 1952, 119,611 miles of pipelines were constructed, 13,247 miles of which were built in 1952.

Early Pipelines in Ontario.—In Canada the early oil development centred in the peninsula of southwestern Ontario between Lakes Huron, Erie and Ontario. This area, although still producing some oil, is important now on account of its gas production which, through the years, has been piped to various centres of population. Gas-field development followed the oil-field explorations which were commenced in a substantial way about 1860. The first well drilled for natural gas was located

* Prepared by Dr. G. S. Hume, Director General of Scientific Services, Department of Mines and Technical Surveys.

† See *Problems of Long Distance Transportation of Natural Gas*, Federal Power Commission, Natural Gas Investigation, Docket No. G580, Nov. 1947.

near Port Colborne, Ont., and was undertaken by the Port Colborne Gas, Light and Fuel Company. It reached a depth of 763 ft. and had a capacity of only 7,000 cu. feet a day. However, this was the beginning of a considerable expansion of drilling which led to development of gas areas in Humberstone and Bertie townships in Welland county. In 1891, so much gas was available that the Provincial Natural Gas and Fuel Company began to export it across the border to Buffalo, N.Y. At that time there were 15 wells with an average open flow of 2,500 M cu. feet per day and the field covered about 28 sq. miles. The present city of Welland was supplied with natural gas in 1893 and Niagara Falls in 1904. Export ceased in 1908 with the decline of pressures in the gas area.

In Kent county a number of gas fields were found beginning with the Tilbury field in 1906. In 1921, the Dawn gas field in Lambton county was discovered and for some years this field has been used by the Union Gas Company for storage of gas obtained partly from the United States in the off-peak season for use during the winter when the demand is at a maximum. Since 1930, there has been a reasonably intense search for gas fields with considerable success in southwestern Ontario. Reserves of gas are estimated at 150,000,000 M cu. feet and, taking into consideration the curtailment of outlets, the supply position at present is relatively good. Markets could be greatly extended if large gas volumes were available at attractive competitive prices. Many of the cities in southwestern Ontario, including Toronto, have plants that make artificial gas, mainly from coal. This gas has a heating value of less than one-half that of natural gas and sells at a considerably higher price per unit volume. This puts it in a very unfavourable position compared with natural gas but on account of the convenience it is used quite extensively, particularly for cooking and for water heating. It is piped only within each distributing area where the gas is manufactured.

In the early days* transportation in the oil fields of Ontario was by horse-drawn wagons. "In 1862 there were 400 teams drawing oil from Oil Springs to Wyoming station, a distance of 13 miles" but later the field expanded and in 1880 there were many more teams. In 1875, small-sized pipelines were built from the wells to the main gravelled road and later these were collected into receiving stations. Presumably these were the first oil-gathering lines in Ontario.

Early Pipelines in Alberta.—In Western Canada the first pipeline of considerable length was built in 1912 from the Bow Island gas field in southern Alberta to Calgary. The main pipeline was 16 inches in diameter and 170 miles long. Branch lines were constructed to supply gas to the various towns *en route*. In 1921, when the early developments following the 1914 boom in Turner Valley gave some substantial flows of gas, a 6-inch line was built from Turner Valley to Okotoks where it joined the main Bow Island-Calgary gas line. In 1924, a connection was made by 10-inch pipeline from Bow Island to Foremost, about 30 miles distant. In 1928, after Turner Valley had been developed considerably following the finding of large gas volumes in the Palæozoic limestone in 1924, a 14-inch gas pipeline was built from the field to Pine Creek at DeWinton where it joined the Bow Island-Calgary 16-inch line. In 1930, the Bow Island field was approaching exhaustion and, as there was large wastage of gas in Turner Valley owing to an excess made available in the production of light oil, it was decided to repressure the Bow Island

* Harkness, R. B. *Canadian Oil and Gas Industries*, Vol. 4, No. 3, March 1951, p. 36.

field with gas that would otherwise be wasted. This was started in 1930 through seven wells, four wells being used for observation. The operation continued until 1939 and was resumed in 1945.

In 1914, the Viking gas field, 90 miles east of Edmonton, was discovered and was later extended to include the Kinsella field. A pipeline from Viking to Edmonton was built in 1923 and, in 1940, the line was extended to the Kinsella field. In 1947, the main pipeline was branched east of Edmonton and extended southward to supply the communities *en route* as far as Red Deer; previously it had been extended north to Vegreville.

In 1926, a 4-inch pipeline was constructed from the town of Fabyan to supply gas to the town of Wainwright, a distance of eight miles.

In 1928, Royalite Oil Company constructed a 4-inch oil line from Turner Valley to the Imperial oil refinery at East Calgary. Previously, the naphtha from Turner Valley gas-cap wells had all been trucked from Turner Valley to Okotoks. In 1929, another 4-inch oil line was constructed by the Alberta Pipe Line Company to serve the Regal refinery at Calgary. It will be recalled that Turner Valley Royalties well encountered crude oil on the west flank of the Turner Valley structure in 1936. A 6-inch pipeline was laid parallel to the Regal line to the south side of the Sarcee Indian Reserve and in 1938 this line was extended to Calgary. This brought the capacity of the three oil pipelines to 28,000 bbl. a day. A maximum production rate of slightly more than 29,000 bbl. a day was reached in Turner Valley in February 1942 but this was not sustained and the pipeline capacity proved adequate for all subsequent Turner Valley production.

The Canol Pipeline.—During World War II, the Canol pipeline was built from the Norman Wells field in the Mackenzie River area of the Northwest Territories across the Cordillera to Whitehorse in Yukon Territory, a distance of 598 miles. The pipeline was 6 inches in diameter for 140 miles on the Whitehorse end; the remainder was 4 inches. The work on the Canol agreement was commenced in 1942 and the contract was terminated in 1945. The line, with 10 pumping stations, was designed for the delivery of 3,000 bbl. a day at the Whitehorse refinery but actually it operated for a time above that amount. Oil was put in the pipeline in December 1943 and more than 1,000,000 bbl. were delivered during the period of operation. At the end of 1944, there were 56 oil wells in the Norman Wells field. The amount of oil actually delivered under the Canol project was 1,649,604 bbl. but, of this, 356,112 bbl. were processed in the Norman Wells refinery for the use of contractors on the project. After the War, the pipeline was abandoned and the pipe removed since, on account of its size, it could never have been operated economically.

Recent Pipeline Developments.—Following the finding of oil at Leduc, Alta., in 1947, a pipeline 8 miles in length and 8 inches in diameter was constructed from the field to Nisku on the Edmonton-Calgary Canadian Pacific Railway line. The reconstruction at Edmonton, in 1948, of the refinery used in Whitehorse under the Canol project led to the extension of this line from Nisku to East Edmonton. With the extension of the Leduc field to Woodbend late in 1947 and the discovery of the Redwater field in 1948, it became apparent that cheaper transportation than can be provided by the railways was needed in order that Alberta oil might reach more distant markets. Accordingly, early in 1949, Imperial Oil Limited proposed to build a 16-inch oil line from Edmonton, Alta., to Regina, Sask. The

original conception for this line was a capacity of 50,000 to 60,000 bbl. of oil a day which, by the addition of six more pumping stations, could be increased to 100,000 to 120,000 bbl. a day. Early in 1949 the Golden Spike field, west of Leduc, was discovered and in May the Leduc-Nisku oil pipeline was extended 8 miles to Golden Spike.

At present, in addition to the 8-inch line from Leduc to Nisku, a second 8-inch line extends eastward from the Golden Spike field through the North Woodbend area, across the North Saskatchewan River, to Edmonton. A 6-inch branch line, six miles long from the Acheson field to the north, feeds into this. The maximum capacity through the Nisku terminal is about 37,800 bbl. a day and the initial capacity of the Woodbend line was 28,000 bbl. a day without a booster pump station. As the production increased, a pump station was built about 15 miles from Edmonton, allowing for a maximum delivery of 36,000 bbl. a day or a total delivery through the two lines of more than 70,000 bbl. a day from the Leduc, Woodbend, Acheson and Golden Spike fields. To increase delivery, the pipeline from Leduc to Nisku, a distance of 5.5 miles, will be looped in 1953, raising its capacity about 13 p.c. and the 14-mile Nisku-Edmonton line will be doubled by another 8-inch line. Summer capacity of these lines is somewhat greater than winter capacity owing to the greater viscosity of the oil in cold weather. This new construction will increase the 8-inch lines in the Leduc and adjacent areas to 74 miles and the total Imperial Oil pipeline systems to 274.5 miles, of which 181.3 miles are in the Leduc-Woodbend-Golden Spike-Acheson areas, 79.2 miles in the Redwater field, and 14 miles in the Excelsior field.

In addition to the Golden Spike field, several new discoveries were made in 1949, including Joseph Lake, Stettler, Campbell, and Excelsior in south-central Alberta and Normandville in the Peace River area. When it therefore became evident early in 1949 that there would be a large increase in oil reserves, Imperial Oil Limited modified its original plans for a pipeline to Regina and in May announced that the line would be built by the Interprovincial Pipe Line Company Limited from Edmonton to the head of the Great Lakes. Canada's consumption of petroleum at that time was about 300,000 bbl. a day and it was estimated that it would reach 500,000 bbl. a day by 1958. To support a production of 300,000 bbl. a day, reserves of 2.5 to 3,000,000,000 bbl. would be necessary and in 1949 the reserves in Alberta were estimated to be about 750,000,000 bbl. The line as finally designed was for 20-inch pipe for 439 miles from Edmonton, Alta., to Regina, Sask., 16-inch for 336 miles from Regina to Gretna, Man., where the pipeline crossed the International Boundary to the United States, and 18-inch pipe for 322 miles from Gretna to Superior, Wis., U.S.A., at the head of the Great Lakes. The cost of construction was estimated at about \$90,000,000. Initially, the through-put was to be 95,000 bbl. daily from Edmonton to Regina, to be increased as need arose by new pumping stations. Tankers on the Great Lakes were to carry the oil to Sarnia, Ont., where Imperial Oil Limited operates a refinery which was then using 57,000 bbl. of crude oil a day, and storage was to be provided at Superior for decreased deliveries during the winter when navigation is closed.

The pipeline was built in 1950, actually in 150 days construction time, and was joined from Edmonton to the Redwater field by 30 miles of 16-inch pipeline, thus making the total length 1,127 miles. A 10-inch branch line from Gretna, with an initial through-put capacity of 14,000 bbl. a day, was built 75 miles to Winnipeg to supply a new \$10,000,000 refinery constructed there. The pipeline was connected

to the refinery of North Star Oil Limited at St. Boniface, Man., by a 3.5-mile 8-inch line. So rapid was the increase in oil reserves in Alberta that before the main pipeline was completed pipeline officials announced that the number of pumping stations would be increased so that the capacity of the Edmonton-Regina part of the line would be brought up to 120,000 bbl. a day, and, east of Regina, from 70,000 to 100,000 bbl. a day. The pipeline was welded at the joints, mechanically cleaned of all scale and rust, coated against corrosion with an application of specially processed hot coal-tar enamel, and then wrapped by machines with a coating of fibre glass and a wrapper of coal-tar saturated asbestos felt before being lowered into a trench and covered.

Oil was started in the pipeline in October 1950, and moved through it at about four miles an hour. The initial transmission charge from Redwater to Regina was 31 cents, or 29 cents from Edmonton, against a rail haul rate at that time of \$1.37 a barrel. The estimated cost of the rail haul from Edmonton to Superior was \$2.43 a barrel as against a pipeline rate of 54 cents. Two large tankers, each with a capacity of 115,000 bbl., were put in operation on the Great Lakes by Imperial Oil Limited and a third was constructed in 1951. British American Oil Company also built a lake tanker of the same size in 1952 to supply the Clarkson refinery near Toronto, Ont.

Storage facilities for oil had to be provided at each of the terminals. Thus, the storage was 840,000 bbl. at Edmonton, Alta.; 50,000 bbl. at the Moose Jaw, Sask., terminal; 252,000 bbl. at Regina, Sask.; 28,000 bbl. at Brandon, Man.; 168,000 bbl. at Gretna, Man.; 155,000 bbl. at the Winnipeg refinery; and 1,800,000 bbl. at Superior, Wis. It was found in the winter of 1950 that the storage at Superior, provided by 12 tanks each with a capacity of 150,000 bbl., was insufficient and was therefore increased by the addition of 12 more 217,000-bbl. tanks.

In the summer of 1951, a refinery built at Superior, Wis., at the terminus of Interprovincial's pipeline went into operation at 4,000 bbl. a day. This was the first Alberta oil to be refined in the United States and constituted a milestone in the history of oil development in Canada made possible by pipeline construction.

In 1953, Interprovincial's pipeline will be extended 635 miles from Superior to Sarnia, Ont., by Lakehead Pipe Line Company, through the construction of a 30-inch pipeline, the estimated cost of which is \$76,000,000. This will give a carrying capacity of about 300,000 bbl. a day and, in order to get this volume of oil to Superior, the Interprovincial line will be further looped with a 24-inch line on the Regina-Gretna sector. When completed to Sarnia, the oil pipeline from Alberta will be 1,765 miles in length, the longest oil pipeline in the world.

In May 1950, Imperial Oil Limited opened a new \$5,500,000 gas-processing plant at Devon, Alta., in the Leduc field. This plant was built not only to recover the gasoline, propane and butane from the gas produced with the oil but also to make the gas available for use. A gas pipeline was built from Leduc to Edmonton to deliver 7,000 M cu. feet daily to the Edmonton City power plant. It was also tied in to the gas system of Northwestern Utilities Limited which supplies Edmonton. In addition, short branch lines were built to supply gas to the towns of Devon and Leduc.

In November 1950, a pipeline 17.5 miles long and 4.5 inches in diameter, constructed by Westcoast Transmission Company from the Pouce Coupe field in the Peace River area of Alberta near the British Columbia boundary to Dawson

Creek, B.C., was put in operation thereby constituting the first export of gas from Alberta. Three wells in the Pouce Coupe field were attached to the line which was built at a cost of about \$200,000.

In 1951, Northwestern Utilities of Edmonton greatly expanded its facilities by drilling new wells in the Viking-Kinsella field and by building extensions of its distribution system to serve the town of St. Albert and the Namao airport, a distance of 13.4 miles. Also, a new 35-mile 16-inch transmission line was built from the gas field to a point midway between the towns of Ryley and Tofield. This expansion was made necessary mainly by the increase in the population of Edmonton resulting from industrial development subsequent to the discovery of oil.

In the Calgary area, Shell Oil Company in 1951 built a new plant at Jumping Pound for the extraction of sulphur and entered into a contract to supply gas to Calgary at a minimum rate of 20,000 M cu. feet a day. A 12-inch pipeline, 20 miles long and costing \$375,000, was built to Calgary and a westward extension constructed to supply the cement plant at Exshaw and the town of Banff.

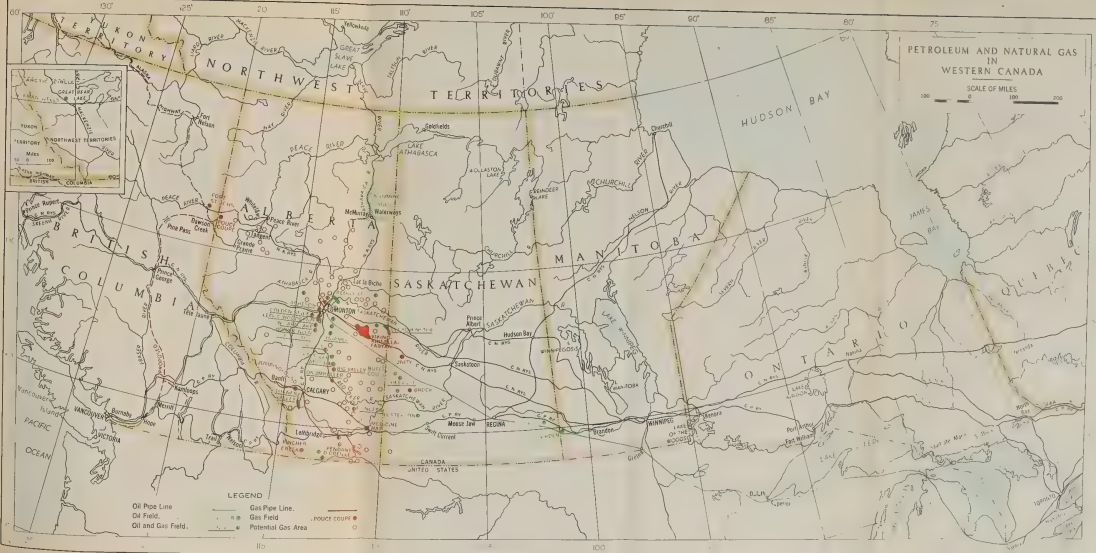

In 1951, the Alberta Government authorized export of natural gas from the Pakowki Lake area of southern Alberta to Montana Power Company in the United States to supply Anaconda's metal-refining operations at Butte. The permit allowed a maximum export rate of 30,000 M cu. feet a day from Apr. 7, 1951, to Apr. 6, 1952, and 35,000 M cu. feet for the next three years and 40,000 M cu. feet to the end of the permit five-year period. The total amount to be withdrawn was limited to 43,800 M cu. feet but, in case of necessity, the permit may be revised in the first two years. The pipeline, 16 inches in diameter, was built from the gas fields south to the International Boundary where delivery was taken by Montana Power Company.

In 1951, a 6-inch oil pipeline was built by Edmonton Pipe Line Company Limited from the Joseph Lake field to the Edmonton terminal of the Interprovincial pipeline, 20 miles distant, and in 1952 was extended 12 miles south to the Armena oil field. Formerly, the oil from the Joseph Lake field was trucked to Nisku on the Edmonton-Calgary CPR line at a cost of 33 cents a barrel and from Nisku the oil moved through the Leduc line to Edmonton. The new pipeline allowed an increase of 20 cents a barrel to the oil producers in the Joseph Lake field which in 1952 had an estimated reserve of 15,000,000 bbl.

In 1952, Canadian Gulf Company laid gathering lines for oil in the Caprona-Fenn, Big Valley and Stettler fields and built a 12-inch line from Stettler through the New Norway field to Edmonton.

The development of the Wizard Lake field in 1951 south of Leduc by McColl-Frontenac and Texas Oil Companies led to the building of an 8-inch pipeline from that field to Edmonton and of 6-inch gathering lines within the field, the total length being 54 miles. The initial capacity of the line was 12,000 bbl. a day but this may be increased to 30,000 bbl. a day. The discovery of the Bonnie Glen field south of the Wizard Lake field in early 1952 made it necessary to provide for additional pipeline capacity.

Trans Mountain Pipeline.—The increase in reserves of oil toward the end of 1951 led to the consideration of plans for the construction of a 24-inch pipeline from Edmonton, Alta., to Vancouver, B.C., to serve the Pacific Coast market. Accordingly, the Trans Mountain pipeline, 718 miles long through the Yellowhead Pass and via Coquihalla Valley, was partly built in 1952 and was completed in the autumn

of 1953. An extension southward from the Vancouver area will serve refineries in the State of Washington. The terminus of the line in the Vancouver area is at Burnaby and connections by pipeline are made to various refineries and to the Barnet marine loading terminal on Burrard Inlet. The pipeline has four pumping stations which increased its capacity from 75,000 bbl. as originally designed to 150,000 bbl. a day. This through-put may be increased by further pumping stations to 300,000 bbl. a day. The pipeline required about 150,000 tons of steel and when full contains 2,100,000 bbl. of oil. The largest river crossing, 5,700 feet in length, was built during the winter of 1952 across the Fraser River at Port Mann near Burnaby. The pipeline throughout its length is buried 24 to 30 inches deep.

Westcoast Transmission Gas Pipeline.—A 24-inch gas pipeline from the Peace River area of British Columbia and Alberta is proposed by Westcoast Transmission Company Limited. As there is not a sufficiently large gas market on the West Coast of Canada to justify the building of this pipeline, application has been made to the Federal Power Commission at Washington, D.C., for permission to extend it to Seattle and Portland in the United States. The Board of Transport Commissioners for Canada, at Ottawa, has already granted the Company permission to build the line to the Vancouver area. Reserves of gas have been established in the Fort St. John area of British Columbia and in various fields of the Peace River district of Alberta.

Gas Line to Ontario and Western Quebec.—Hearings began in June 1953 before the Petroleum and Natural Gas Conservation Board in Alberta for the right to export gas from southern Alberta. There were several proposals but the Federal Minister of Trade and Commerce and of Defence Production announced in the House of Commons on Mar. 13, 1953, that no further permits would be granted for the export of gas from Canada "until such time as we are convinced that there can be no economic use, present or future, for that natural gas within Canada", but there is no question about the market to be served when Alberta gives official sanction for taking the gas out of the Province. It is expected therefore that a pipeline ultimately will be built across northern Ontario to Toronto and on to Montreal, with a branch line to serve Ottawa. This pipeline would serve all communities *en route* for several miles on each side of it and would be joined with the gas distribution system of southwestern Ontario. It may be of interest to note that a band 10 miles wide, i.e., five miles on either side of the pipeline, contains more than 50 p.c. of the urban population of the four provinces that the pipeline would serve, namely Saskatchewan, Manitoba, Ontario and Quebec. One proposal is to build a 30-inch line capable of delivering up to 500,000 M cu. feet a day. In heating value and efficiency of burning this would be the equivalent of about 25,000 tons of good-grade coal a day. One of the features of such a line is the possibility of using the depleted fields of southwestern Ontario as storage basins during the off-peak summer period so that the pipeline could be operated at a high volume in both summer and winter. A pipeline built from the presently producing gas fields of southwestern Ontario, as soon as the pipeline project from Alberta is approved, would not only build up a market for natural gas in the Toronto area during the two or three years the main pipeline is under construction but, by drawing the gas from these fields, would make them available for storage when the pipeline finally began delivery of gas from Alberta.

Pipelines in Saskatchewan.—In 1953, a 10-inch gas pipeline from the Brock-Coleville fields near Rosetown to Saskatoon, a distance of 140 miles, will be built by the Saskatchewan Power Corporation, a provincial Crown company. The

route selected is via Rosetown, Zealandia, Harris, Tessier, Laura, Delisle and Vanscoy. Estimated consumption will be 3,000,000 M cu. feet in the first year, 7,000,000 M in the second year and 10,000,000 M in the fifth year. The reserves of gas, as estimated by Phillips Petroleum Company and Husky Oil and Refining Limited, are 417,295,000 M cu. feet in the Coleville field and 62,033,000 M cu. feet in the Brock field.

Socony Vacuum Oil Company, which has several small oil fields near the Fosterton field, has announced that it will drill 150 wells in these fields in 1953. Should the reserves justify a pipeline, one will be built to Regina, 165 miles to the east.

In 1952, a crude oil line was built by Saskatoon Pipeline Company from the Interprovincial pipeline at Mildren, 20 miles south of Rosetown, to the Hiway Refineries Limited plant at Saskatoon, a distance of 56.9 miles. The line is 6 inches in diameter with an initial through-put of 3,000 bbl. a day but with a rated maximum capacity of 12,000 bbl. a day. Instead of using a heavy coating of coal-tar enamel and a wrapping of fibre glass and tar-impregnated asbestos, the Company used an insulation of an eighth-inch coating of special wax enclosed in aluminum foil for the pipeline.

The only gas lines in operation in Saskatchewan are those that supply gas to Brock and Kindersley from the Brock field.

Oil Pipelines in Eastern Canada.—In 1941, a 12-inch line, 236 miles long, was built from Portland, Me., U.S.A., to Montreal, Que., to bring crude oil to Montreal refineries. The pipeline originally had a capacity of about 60,000 bbl. a day but in 1947, by increasing the pressure, the flow was brought up to 70,000 bbl. In 1951, another 18-inch pipeline was laid along the same route and the number of pumping stations was reduced, cutting the capacity of the 12-inch line to 27,000 bbl. and giving the 18-inch line a capacity for light and medium grades of oil of 100,000 bbl. a day. One of the formerly used pump stations was maintained so that eventually the combined capacity of the two lines may be increased to 153,000 bbl. a day. The Montreal area, by the end of 1953, will have a refining capacity of 194,000 bbl. a day, about 35 p.c. of the Canadian total.

In recent years nearly all the oil entering the Portland-Montreal pipeline has been of South American origin, mostly from Venezuela. Little or no oil has been entering Canada from the United States via this route; crude oil from that source enters Canada mainly at Sarnia, Ont., and at Vancouver, B.C. Some additional oil from the Near East comes to Canadian eastern refineries via ocean tankers.

Products Lines in Ontario and Quebec.—In 1951, Trans Northern Pipe Line Company built a 400-mile 10-inch pipeline from Montreal, Que., to Toronto and Hamilton, Ont., with a 6-inch branch line, 44 miles long, from a junction near Cornwall to Ottawa, Ont. This line was designed for a capacity of 40,000 bbl. daily of products from the refineries of British American, Shell Oil of Canada, and McColl-Frontenac oil refineries at Montreal, Que.

In 1952, a pipeline consisting of 132 miles of 12-inch pipe from Sarnia to Waterdown, Ont., and 56 miles of 10-inch pipe from Waterdown to Toronto went into operation to deliver oil products from the Sarnia refinery of Imperial Oil Limited. Initial through-put was 22,000 bbl. a day but, by installing an additional pumping station at London, Ont., the capacity may be raised to 49,000 bbl. Hamilton is supplied by two 6-inch lines, about 6 miles long, with take-off at Waterdown. These lines cross Hamilton harbour, about a mile wide.

Future Pipelines in Canada.—New oil fields which will undoubtedly be found in Western Canada will make necessary the building of new pipelines. Already an oil find at Sturgeon Lake east of Grande Prairie in the Peace River area of Alberta has raised the question of a new outlet, perhaps a feeder line to the Trans Mountain oil line to the west coast. The production of oil in many fields is accompanied by the production of gas and new gas outlets must be established to avoid waste, which in Alberta has now reached more than 1,500,000 M cu. feet a month. Saskatchewan also has established considerable gas reserves and these no doubt will increase.

The logical presently available outlet, in accordance with federal policy, is the large fuel market in Ontario and Quebec and this, according to a recent survey is "the most economic outlet for southern Alberta gas". There is no doubt about the availability of the market but the estimates of costs have varied considerably. There can be no doubt either that natural gas made available by pipeline to the fuel-deficient market of central Canada would prove a tremendous asset to this country and, in part, relieve its dependence on sources for fuel beyond its control.

Section 2.—Oil Pipeline Statistics*

Oil pipelines operated in Canada number sixteen, of which nine are directly linked with the Interprovincial Pipe Line Company's system. The British American Alberta Pipe Line Limited, Canadian Gulf, Edmonton and Imperial Pipe Line Companies, and the Texaco Exploration Company, all deliver crude oil to Interprovincial either at Redwater, Alta., or at the Edmonton terminal. The British American Saskatchewan Pipe Line Limited and Saskatoon Pipe Line Company link the Interprovincial system to Moose Jaw and Saskatoon, respectively, while Anglo Canadian Oils Limited and the Winnipeg Pipe Line Company are offshoots which supply crude oil to Brandon and Winnipeg, Man. The Valley Pipe Line Company transports crude oil and natural gasoline from the Turner Valley to refineries at Hartell and Calgary, Alta. Oil from Venezuela, Arabia and other countries reaches Montreal refineries from Portland, Me., U.S.A., through the lines of the Montreal Pipe Line Company. The Trans-Northern Pipe Line Company, which links refineries at Montreal, Que., and Clarkson, Ont., with numerous consuming centres, including Ottawa, Belleville, Kingston, Toronto and Hamilton, carries a large variety of petroleum products. The Imperial Oil Sarnia Products Pipe Line Division supplies London, Hamilton and Toronto, Ont., with products of Sarnia refineries. The Sun Pipe Line Company carries refined oils from the United States to that Company's distributing centre at Sarnia, Ont. This Company is presently constructing a products line from Sarnia to Toronto. Sarnia refineries are supplied with considerable quantities of United States crude oil through the line of the Transit and Storage Company.

Pipeline deliveries shown in the following tables include deliveries to non-pipeline carriers, foreign pipelines and terminals including refineries and distributing centres. Comparable statistics for years prior to 1950 are not complete but would be relatively small as the system of the Interprovincial Pipe Line Company did not go into operation until the latter part of 1950. Net gathering-system deliveries in Alberta fell sharply after the opening of the Interprovincial system as the new trunk line carried most of the oil formerly moved eastward in railway tank cars.

* Statistics of oil pipelines are given in greater detail in the DBS monthly report, *Pipe Lines (Oil) Statistics*.

PART VII.—WIRE COMMUNICATIONS*

Section 1.—Telegraphs

The early history of telegraphic communication in Canada is given in the 1934-35 Year Book, p. 778.

Federal Government Telegraph and Telephone Service.†—The function of the Telegraph and Telephone Section of the Department of Transport is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest. These services include: telegraph and telephone services to scattered settlements along the coast of Cape Breton Island; cable services to Campobello, Grand Manan and other islands in the Bay of Fundy, to Prince Edward Island and to a number of small islands in the Gulf of St. Lawrence; cable connections with Pelee and Manitoulin Islands in Ontario as well as telephone lines on the latter; some lines to northern outlying districts in Saskatchewan; telegraph lines from Edmonton to the Athabasca and Peace River country in Alberta in addition to an extensive telephone system in the latter area; telegraph and telephone communications around the coast of Vancouver Island, B.C., and adjacent islands; service to fishing, lumbering and mining centres in the interior; and an overland telegraph and telephone line serving communities from Ashcroft, B.C., to Dawson, Y.T.

As at Mar. 31, 1953, the Telegraph and Telephone Service comprised 6,995 miles of pole line, 24,580 miles of wire, 224.5 nautical miles of submarine cable, 50 radio stations and 399 offices. The number of messages handled during the year was 1,548,451, producing a gross revenue of \$1,417,318 and a net revenue of \$991,564.

Telegraph Systems.—The Canadian telegraph systems are composed of lines owned by the Federal Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world and are operated under great climatic and geographical difficulties.

* Except where otherwise noted, this Part has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. The Division issues annual reports dealing with telegraph and telephone statistics.

† Revised by G. C. W. Browne, Controller of Telecommunications, Telecommunications Division, Department of Transport, Ottawa.

1.—Summary Statistics of Canadian Telegraphs, 1943-52

NOTE.—Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

¹ Excludes commission operators.

² Includes messages to and from vessels on the Great Lakes and the St. Lawrence River and messages to and from stations.

³ Excludes messages relayed and includes paid wireless messages to and from ships in the Gulf of St. Lawrence and on the Atlantic Ocean.

Submarine Cables.—Four cable companies operate submarine cables landing in Canada: Cable and Wireless Limited; the Commercial Cable Company; the Western Union Telegraph Company; and the French Telegraph Cable Company. These companies operate to stations in the United Kingdom, Ireland, the United States, Bermuda, Australia, New Zealand and St. Pierre and Miquelon Islands. The number of cables operating between connected stations and the length of cables are given in the following table.

Section 2.—Telephones

A brief account of the early development of telephones in Canada is given in the 1934-35 Year Book, p. 781.

Telephony in Canada to-day is moving ahead at a pace matching that of national progress generally. New devices, new systems and new services are being introduced to provide more and better communications. Operator dialing of long-distance calls is an important step towards faster and more accurate continent-wide telephone service. New equipment and methods fit into a long-range program to enable operators to dial calls straight through to distant telephones in Canada or the United States without the assistance of other operators along the route.

One of the new devices playing an increasingly important role in this development is the transistor, a discovery of telephone research. This tiny and amazingly simple electronic amplifier, based on an entirely new principle, can perform efficiently many of the functions of the ordinary vacuum tube and do many other things besides. The transistor's small size, low power consumption and expected

long life make it suitable for application to submarine cable, compact military electronic equipment, computers and other devices for which the vacuum tube is not as well suited. In telephony very wide applications of the transistor are in prospect to increase the speed, accuracy and economy of switching equipment.

Telephone circuits to carry the growing volume of intercity traffic and to perform special communications functions are being provided on a scale to equal the development of switching systems. Canada's first microwave radio relay system, capable of carrying many simultaneous telephone conversations as well as television programs, was opened to service early in 1953, reaching from Toronto through Ottawa to Montreal. Extensions of this system are already being engineered and constructed further to improve long-distance telephone service and to extend the scope of television network broadcasting in Canada.

Telephone Systems.—The 2,904 telephone systems operating in 1951 included the three large provincial systems in Manitoba, Saskatchewan and Alberta, and smaller governmental systems in Ontario, Quebec and New Brunswick, together with the system operated by the Federal Department of Transport and the National Parks of Canada, Department of Resources and Development. Also included were 22 municipal systems, the largest being operated by the Cities of Edmonton, Fort William and Port Arthur. Of the 2,255 co-operative telephone companies, 1,003 were in Saskatchewan, 816 were in Alberta and 207 in Nova Scotia. The largest among the 448 stock companies operating telephone systems in 1951 were the Bell Telephone Company and the British Columbia Telephone Company. Over 63 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Company, and their telephones in Quebec and Ontario constitute 59 p.c. of the total number for Canada.

Telephone Equipment.—During the period 1942-51, there was an increase of 1,485,991 in the number of telephones in use, representing an advance of 58 p.c. in telephones per 100 population.

Of the 3,113,766 telephones in Canada in 1951, 2,004,665 or 64 p.c. were operated from automatic switchboards and the remainder from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are rapidly displacing them in the other provinces.

3.—Mileages of Pole Line and Wire and Telephones in Use, 1942-51

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Year	Systems	Pole-Line Mileage	Mileage of Wire	Telephones in Use					
				Business	Resi- dential	Rural ¹	Public Pay	Total	Per 100 Population
	No.	miles	miles	No.	No.	No.	No.	No.	No.

1950....	2,912	245,443	9,488,467	813,352	1,611,759	447,691	44,290	2,917,092	21.1
1951....	2,904	249,638	10,330,751	864,015	1,735,355	467,171	47,225	3,113,766	22.2

¹ Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.

The density of telephones in the different provinces is influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

Telephone Calls.—Table 7 is based on estimates made by systems operating almost 90 p.c. of all telephones in Canada. Actual count of calls on days of normal business was made and, after adjustment for incompleting calls, holidays, Sundays, etc., the average was multiplied by 365. The long-distance calls, in practically all cases, were those actually completed.

7.—Local and Long-Distance Calls and Averages per Telephone and per Capita, 1942-51

NOTE.—Figures from 1928 will be found in the corresponding tables of previous Year Books beginning with the 1939 edition.

Year	Local Calls	Long-Distance Calls	Total Calls	Total Calls per Capita ¹	Average Calls per Telephone

PART VIII.—RADIO COMMUNICATIONS

In the 1945 Year Book, pp. 644-646, an outline is given of the development of administrative control over radio-communication in Canada. See also p. 784 of this volume.

Section 1.—Administration*

The administration and regulation of radio-communication in Canada is carried out by the Telecommunications Division of the Department of Transport. The radio activities of the Division may be summarized as follows: (1) the administration of national and international radio laws and regulations and of regional agreements, involving the issuance of radio licences, inspection of radio stations, certification of radio equipment, examination of operators, allocation and monitoring of frequencies, compilation and settling of international accounts for radio messages, investigation and suppression of inductive interference to radio reception; and (2) construction, maintenance and operation of radio-communication stations and of radio aids to marine and air navigation.

National and international radio laws and regulations include: the Canadian Broadcasting Act, 1936, the Radio Act, 1938, and Regulations made thereunder; the International Telecommunication Convention and Radio Regulations annexed thereto; the Inter-American Radiocommunications Convention; the Inter-American Arrangement Concerning Radiocommunications; the North American Regional Broadcasting Agreement; those Articles of the International Civil Aviation Convention applicable to aeronautical radio requirements; the Canada Shipping Act, 1934, and Radio Regulations for Ship Stations issued thereunder, and that part of the International Convention for the Safety of Life at Sea applicable to radio requirements for ships.

Licensing and Operation.—In all branches of radio, basic control is exercised over the right to establish a station, assignment of frequencies, operator standards, operating procedure, and general regulations concerning the manner in which radio stations are used.

Under the Broadcasting Act, 1936, applications for licences to establish broadcasting stations, or for modification of existing stations, are referred to the Canadian Broadcasting Corporation for its recommendations to the Minister of Transport before being dealt with by the Department of Transport. The Canadian Broadcasting Corporation also controls the linking-up of stations that form networks and, in addition, the character of programs being broadcast. With these exceptions, the control of broadcasting stations is carried out by the Telecommunications Division of the Department of Transport.

The standard broadcast band is crowded with stations that are capable of interfering with one another over the entire North American region, particularly at night. A plan for the accommodation of the largest number of stations with the least interference was evolved as a result of extensive studies conducted by Canada, Cuba, the Dominican Republic, Haiti, the Bahama Islands, Mexico and the United States and was embodied in the North American Regional Broadcasting Agreement.

* Revised in the Department of Transport, Ottawa.

Before a new standard broadcasting station can be licensed or before modifications can be made in an existing station, engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and notification sent to the signatory countries of the North American Regional Broadcasting Agreement. After the establishment or change is completed, proof of performance must be submitted to establish that the actual installation is in accordance with the approved plan.

The allocation of high frequencies and their efficient utilization requires reasonably accurate information on the transmission properties of the ionosphere which vary with the season, the sunspot cycle and other factors. This information is obtained from hourly measurements of the ionosphere made at some 70 points throughout the world and analysed by the United States Bureau of Standards at Washington, D.C. The Canadian measurement stations are located at St. John's, Nfld.; Resolute Bay, Cornwallis Island and Baker Lake, N.W.T.; Fort Chimo, Que.; Churchill, Headingley and The Pas, Man.; Ottawa, Ont.; and Prince Rupert, B.C. Data from these stations are correlated by the Defence Research Board. Six frequency monitoring stations are maintained at suitable points across Canada to check operating frequencies of all classes of radio stations to ensure that they do not depart from the assigned frequency by an amount greater than permitted by the international conventions.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for use in case of distress. Approval is given for each make and model of equipment that comes up to the required standard and, in addition, the ship station as a whole is inspected before the licence is issued and periodically thereafter. Foreign ships are subject to inspection before sailing from Canadian ports to ensure that they conform with the requirements of the Safety of Life at Sea Convention.

Analogous inspections of aircraft radio stations are carried out. Standards are provided specifying in detail the requirements to be met to ensure an airworthy installation. A certificate of airworthiness is granted to manufacturers for each type or model of aircraft radio equipment that has been demonstrated to meet the requirements. Only type-certificated equipment is accepted for use on scheduled airlines, though other equipment, if inspected, is acceptable for other aircraft.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile stations and the Radio Act, 1938, provides that all operators, both commercial and amateur, must pass examinations to prove their ability to operate the respective classes of stations on which they are engaged. Competent operators are required on all classes of stations in order that the technical requirements prescribed under international agreement be closely adhered to and are particularly essential in the case of ships and aircraft stations in the interests of safety of life.

Investigation and Suppression of Inductive Interference.—Under the Broadcasting Act, the use of electrical equipment that will produce harmful interference to broadcast reception is not permitted. The Telecommunications Division of the Department of Transport maintains 54 cars equipped for measuring and locating sources of interference to broadcast reception. In addition to locating the sources of interference, advice is given as to how it can be suppressed or eliminated. These cars operate from the permanent Radio Inspection Offices located in 25 cities throughout Canada.

1.—Investigations of Inductive Interference, Years Ended Mar. 31, 1949-52

Sources not reported cured.....	1,635	2,130	2,029	1,287
Sources having no economic cure.....	95	85	99	42

Industrial, scientific and medical apparatus is brought under strict control, in accordance with Regulations for Controlling Radio Interference and under the authority of Section 23 of the Canadian Broadcasting Act, 1936. Regulations require that radiation from such apparatus, which is liable to cause interference to radiocommunications, must be suppressed either by shielding or by replacing the apparatus with a non-interfering type. The Department of Transport conducts type-tests on diathermy and industrial heating apparatus submitted by manufacturers, and the types that fulfil the requirements of the Department are listed as non-interfering. The radiation from all such sources on communication frequencies must not exceed the tolerances specified by the Canadian Standards Association.

Radio Revenue.—Regulations concerning the rendering and settlement of international accounts are contained in the International Telecommunication Convention and Regulations. Sources of revenue include commercial ship and land stations and interstation messages handled by Departmental ships and land stations, radiotelegrams exchanged by foreign ships through Canadian coast stations, private commercial traffic via Departmental airway radio stations, and radio services rendered to aircraft of private airline companies by such stations. The volume of messages and words handled during the year ended Mar. 31, 1953, and the revenue therefrom, together with revenue from licence fees, examination fees, fines and forfeitures, rentals, etc., are given in Table 2.

2.—Messages Handled (including retransmissions) and Revenue Collected by the Department of Transport, Year Ended Mar. 31, 1953

¹ Includes licences issued free, numbering 12,782 in 1949, 15,810 in 1950, 18,056 in 1951, 20,303 in 1952 and 22,973 in 1953. See Table 4 for classification for 1953.

Section 2.—Total Radio Stations and Radio Services

The total number of radio stations in operation in Canada and on ships and aircraft registered therein are shown by classes in Table 4. Of these stations, 519 were operated by the Department of Transport. The Department of National Defence, in addition to stations established for military purposes, operated 11 permanent stations and two summer stations, situated along the Mackenzie River and in Yukon Territory, on behalf of the Department of Resources and Development. The Department of Resources and Development operated 102 stations to provide communication and time-signal service for survey parties and for the protection and administration of National Parks. The Department of Public Works operated three stations, the Department of Agriculture five stations, the Department of National Health and Welfare 12 stations, the Department of National Revenue two stations, the Department of Citizenship and Immigration four stations, the Department of Fisheries five stations, the Department of Mines and Technical Surveys 55 stations, the Royal Canadian Mounted Police 812 stations, and the National Research Council 19 stations, 16 of which were experimental.

Stations operated by the Canadian Broadcasting Corporation numbered 80 and those by private owners, 178.

4.—Radio Stations in Operation, by Class, as at Mar. 31, 1953

¹ Station location ("Z") markers are installed at 91 radio range stations. ² Two stations at Port Harrison, Que., and Coppermine, N.W.T., also perform restricted coast station service during the season of navigation, but since they are primarily weather-reporting stations they are shown under this heading only.

³ Includes 27 repeater stations and two television stations.

The foregoing classes are numerous and complicated by the fact that many of them perform closely related functions. Descriptions of the services provided by different types of government-operated stations are given in the 1951 Year Book, pp. 804-808.

The Canadian Overseas Telecommunication Corporation.—By virtue of the Canadian Overseas Telecommunication Corporation Act which came into force on Jan. 1, 1950 (R.S.C. 1952, c. 42), the Canadian Overseas Telecommunication Corporation was established to acquire, maintain and operate the external telecommunication facilities in Canada of Cable and Wireless Limited and the Canadian Marconi Company Limited. The Corporation consists of five Directors, one of whom is also the President and General Manager of the Corporation.

By proclamation in the *Canada Gazette* of June 7, 1950, the said facilities of Cable and Wireless Limited and of the Canadian Marconi Company Limited were expropriated and since that date the Corporation has been successfully operating and maintaining these external telecommunication facilities in Canada. On May 1, 1952, a final settlement was made with respect to the acquisition of the physical assets at a total cost of \$3,143,781. These physical assets include Headquarters established at Montreal, Que., overseas cable stations at Bamfield, B.C., Halifax, N.S., and Harbour Grace, Nfld., and wireless transmitting and receiving stations at Drummondville and Yamachiche, Que., respectively.

The purposes of the Corporation are:—

- (a) to establish, maintain and operate in Canada and elsewhere external telecommunication services for the conduct of public communications;
- (b) to carry on the business of public communications by cable, radiotelegraph, radiotelephone or any other means of telecommunication between Canada and any other place and between Newfoundland and any other part of Canada;
- (c) to make use of all developments in cable and radio transmission or reception for external telecommunication purposes as related to public communication services;
- (d) to conduct investigations and researches with the object of improving the efficiency of telecommunication services generally; and
- (e) to co-ordinate Canada's external telecommunication services with the telecommunication services of other parts of the Commonwealth.

Commercial Point-to-Point Radiotelephone Services.—The North-West Telephone Company operates a radiotelephone service between points in British Columbia not hitherto served by telephone communications. Under licences granted by the Department of Transport, the Company has established a number of permanent public commercial radiotelephone stations in that Province. These stations are authorized to provide communication to private commercial radiotelephone stations located at isolated points in the Province. This Company is also licensed to establish limited coast stations at Lulu Island, Powell River, Vancouver, Nanaimo, Victoria, Harrison Lake, Parksville, Althorp Point, Alert Bay, Campbell River and Prince Rupert, B.C., to provide a ship-to-shore service. These stations, used in conjunction with the ordinary telephone exchange, provide a duplex-radiotelephone service to isolated points and to certain ships at sea, and also provide a limited amount of service to stations of the land mobile category.

The North-West Telephone Company is also licensed to provide emergency radiotelephone communication at any point in British Columbia and to carry out tests with a view to extending the existing radiotelephone service throughout the Province.

In order to provide trans-river communication in the lower St. Lawrence area, the following companies operate stations in the Province of Quebec at La Malbaie, Tadoussac, Rivière du Loup, Rimouski, Matane, Montmagny, St. Antoine, Ile aux Grues, Cap Chat, Forestville, Trinity Bay, Baie Comeau, Clarke City, Gaspé Copper Mines, Mont Louis, Chicoutimi, and Tour à Pica: La Compagnie de Telephone de Charlevoix et Saguenay, La Compagnie de Telephone de Kamouraska, the Quebec Telephone Corporation, Gulf of St. Lawrence Telephone Company, and La Compagnie du Telephone Saguenay.

The wire-line facilities between Saint John, N.B., and Digby, N.S., between Charlottetown, P.E.I., and New Glasgow, N.S., and between Red Head, N.B., and Mount Hanley, N.S., are supplemented by radiotelephone links. The stations at Saint John and Red Head are operated by the New Brunswick Telephone Company and the station at Charlottetown is operated by the Island Telephone Company. Terminals at Digby, New Glasgow and Mount Hanley are operated by the Maritime Telegraph and Telephone Company.

The Bell Telephone Company of Canada provides a land mobile terminal radiotelephone service at numerous points in Ontario and operates a microwave link between Toronto and Ottawa, Ont., and Montreal, Que., which carries television programs and is capable of providing many additional telephone circuits. Radio links are also maintained between Pelee Island and Leamington, Ont., and across the St. Lawrence between Sorel and Joliette, Que.

The Canadian National Railway Company operates an extensive radiotelegraph and radiotelephone service in Newfoundland including links between Table Mountain, Nfld., Cape North, N.S., and New Waterford, N.S. This Company is also authorized to provide a limited coast-station service at Port aux Basques, Nfld.

The Avalon Telephone Company operates public commercial stations in Newfoundland to supplement its wire lines and to provide telephonic communication with isolated communities.

The Manitoba Telephone System operates radiotelephone links involving stations at the following points: Riverton, Manigotagan, Hecla Island, Gimli, Norway House, Bissett, Great Falls, The Pas, Snow Lake and Winnipeg, Man. In addition, the Manitoba Telephone System operates stations at Gimli, The Pas and Norway House, Man., to provide terminal service for ships operating on Lake Winnipeg.

Norwesto Communications Limited operates a public commercial radiotelephone service consisting of stations located at Kenora, Red Lake, Ball Lake, Sioux Narrows, Dryden, Sioux Lookout, Minaki and Redditt, which are used in conjunction with the ordinary telephone exchanges to provide telephonic communication to privately owned stations at isolated points throughout the northwestern part of the Province of Ontario.

The Red Lake Telephone Company operates a public commercial radiotelephone station at Madsen, Ont., to provide a connection between the local wire telephone system and the Norwesto Communications Limited network.

The Okanagan Telephone Company operates a public radiotelephone service between Revelstoke and Arrowhead, B.C., and a public commercial terminal station at Kelowna to provide telephonic communication to privately owned stations at isolated points in the Kelowna area.

Provincial Government Services.—Provincial authorities use radio services in many Departments. Table 5 shows the number of stations operated by the Provincial Governments.

**5.—Radiocommunication Stations Operated by Provincial Governments,
as at Mar. 31, 1953**

Province	Stations	Province	Stations
	No.		No.
Newfoundland.....	9	Manitoba.....	167
Nova Scotia.....	14	Saskatchewan.....	487
New Brunswick.....	30	Alberta.....	254
Quebec.....	238	British Columbia.....	625
Ontario.....	943	Total.....	2,767

Other Radiocommunication Services.—Radiotelegraphy and radiotelephony are used throughout Canada to provide means of maintaining contact with isolated points beyond the reach of the regular telegraph and telephone facilities.

Municipal government departments have steadily increased their use of radio to facilitate operations. This increase is noted in all categories of municipal services using radio as a medium of communication with vehicles, i.e., police, fire, engineering, hydro, etc. In addition, the trend toward expansion in the employment of radio for urban land mobile communication has continued and has shown no signs of abating. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical have participated extensively in this increase. Public mobile radio relay message services (telephone answering service) have also been licensed to operate in a number of cities including Montreal, Toronto and Edmonton.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have expanded their use of radio to a considerable degree; this expansion has occurred in both urban mobile and point-to-point radio fields.

Commercial air-carrier organizations including those performing off-route charter services were licensed to operate 893 ground communications stations, 30 navigational aids stations and 516 aircraft stations. A relatively large number of licences were also issued to individuals, manufacturers, mining and oil companies, etc., to authorize the operation of aircraft stations and associated ground stations in conjunction with normal business activities.

A total of 1,083 ground stations and 1,314 aircraft stations were operated by commercial air-carrier organizations, individuals and business concerns during the year ended Mar. 31, 1953.

Radio Aids to Navigation.—*Marine Radio Stations.*—Detailed information covering all marine radio aids to navigation is contained in the annual publication, *Radio Aids to Marine Navigation*. Copies of this publication and of supplementary *Notices to Mariners* issued in connection therewith may be obtained upon request from the Department of Transport, Ottawa.

Coast Radio Stations.—The primary purpose of the coast radio station organization is to provide radiocommunication facilities whereby any ship within 500 miles of Canada's coast may establish communication with shore. Twenty stations on the East Coast and Hudson Bay and Strait, seven stations on the Great Lakes and nine stations on the West Coast broadcast information daily to navigators at advertised hours. In addition, urgent information, such as hurricane warnings, is broadcast immediately upon receipt.

Coast stations CFH Halifax and CKN Vancouver, operated jointly by the Department of Transport and the Royal Canadian Navy, participate in the British Commonwealth scheme for providing long-range communication with ships.

Coast Radio Direction Finding Service.—There are 14 coast radio direction finding stations in operation—eight on the East Coast, five on Hudson Bay and Strait, and one on the West Coast. These direction finding stations continue to enjoy an enviable reputation for efficiency and accuracy. During the year ended Mar. 31, 1953, 15,755 bearings were given without charge to ships and aircraft.

Radio-beacon Service.—Radio beacons are established for the purpose of enabling any ship or aircraft equipped with a direction finder to determine its bearing or direction in relation to the radio-beacon station. There are 54 radio beacons in operation—29 on the East Coast, 16 on the Great Lakes, and 9 on the Pacific Coast.

Generally speaking, in clear weather each station at advertised hours transmits its characteristic for three periods of one minute separated by silent intervals of two minutes. In foggy weather all stations operate continuously, maintaining a uniform time cycle of three minutes, each station transmitting in its proper sequence for one minute separated by silent intervals of two minutes.

At Flat Point, N.S., Partridge Island, N.B., Red Islet, Cap des Rosiers, Bicquette Island, Que., Caribou Island, Hope Island, Main Duck, Southeast Shoal, Cove Island, Burlington Bay, Michipicoten Harbour, Long Point, Port Weller, Ont., Amphitrite Point, Pachena Point and Point Atkinson, B.C., the radio-beacon signals are synchronized with the emissions of the fog alarms for distance finding at those points during foggy weather.

In addition to the above radio-beacon facilities, ships equipped with direction finding apparatus may, upon request, obtain signals for the purpose of taking bearings from any of the coast stations. During the year ended Mar. 31, 1953, 282 such requests for signals were handled.

Loran Stations.—Loran (long-range aid to navigation) is a system of position finding based on the difference in the time arrival of pulse type radio signals transmitted from a pair of stations. This time difference is measured on a Loran receiver and is used in conjunction with specially prepared charts or tables to establish a line of position. The intersection of two or more lines of position determined from two or more pairs of stations provides the required position.

Medical Advice to Ships at Sea.—Ships at sea may obtain medical advice through any of the Department of Transport's coast stations. Messages from ships in this connection are forwarded to the nearest medical officer of the Department of National Health and Welfare and the reply is transmitted to the ship.

Assistance Rendered by Radio to Vessels in Emergency.—Government radio stations rendered assistance to 277 ships and aircraft reported in danger or distress, during the fiscal year ended Mar. 31, 1953.

Aids to Air Navigation.—Radio aids to air navigation are provided from coast to coast and from the United States border to the Arctic along the airways used by the many Canadian airlines, United States airlines flying over Canadian territory, and Canadian and United States military aircraft. To construct and maintain these many facilities, trained engineers and technicians are located at six district offices: Moncton, N.B.; Montreal, Que.; Toronto, Ont.; Winnipeg, Man.; Edmonton, Alta.; and Vancouver, B.C. The large communication stations at Gander, Nfld., are under the administration of the Moncton office.

Radio Ranges.—The principal radio aid to air navigation provided by the Department of Transport is the radio range. These stations, located approximately every 100 miles along airways, provide specific track guidance to pilots by means of audible signals. The signals may also be used for the purpose of obtaining direction finding bearings from the aircraft. In addition, radiotelephone communications are provided between the ground and aircraft by means of which pilots may obtain weather and other information concerning the safety of flight. There are now 93 stations in operation. Work has commenced on the establishment of additional radio ranges to serve the airports at Terrace and Nanaimo, B.C.

Radio Beacons.—These stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings to assist in the navigation of their aircraft. Sixteen of these stations are now in operation, new ones having been established at Embarras, Alta., and Laberge, Y.T. The radio beacons at Prince Albert and Embarras are equipped with radiotelephone facilities to provide communications to and from aircraft. Surveys have been completed for a beacon facility to be installed at Eon, Que., to replace the Mecantina radio range destroyed by fire in the summer of 1952. Additional radio beacons at Hope, Terrace, Kitimat, and Mill Bay in British Columbia, and at Beaverlodge, Sask., are in various stages of planning or construction.

Fan Markers.—These facilities, operating on very high frequencies, provide a pilot with an indication of when he is directly overhead. Normally, they are placed on an airway to inform the pilot when he may safely lose altitude after passing high terrain or to indicate accurately the distance from an airport. Eleven of these stations are now in operation.

Station Location Markers.—These facilities are similar to fan markers except that the signal radiated is such that aircraft may receive the same indication, irrespective of the direction of flight. They are installed at the same location as a radio range to enable a pilot to determine when he is exactly over the station, thus obtaining definite indication of position. Station location markers are installed at all radio range sites except Killaloe, Ont.

Direction Finding Stations.—A direction finding station for determining the bearing of aircraft from the station is in operation at Cape Harrison, Nfld.

Instrument Landing Systems.—Instrument Landing Systems provide radio signals which, when received by special radio equipment aboard aircraft, permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter providing slope guidance to the approach end of the runway, two marker transmitters providing distance indications from the runway at approximately four and one-half miles and 3,500 ft. from the runway, and a low-power radio beacon (compass locator) to assist in holding procedures

and lining up on the localizer course. The localizer and marker transmitters operate on very high frequencies, the glide path on ultra high frequencies and the compass locators on low and medium frequencies. Twenty-three instrument landing systems are now in operation, a new installation having been completed at Gander, Nfld. Construction work is continuing on installations at Patricia Bay and Vancouver, B.C., and at Sydney, N.S. The system under construction to serve Runway 26 at Patricia Bay airport will have a localizer differing from those normally used in that it is highly directive, having only a front course, and is so controlled that clearance indication is shown only out to nine degrees on either side of the centre of the on-course signal. When this system is commissioned, the Patricia Bay radio beacon will become the middle marker compass locator and the fan marker at the same location will become the middle marker.

Aeronautical Communication Stations.—To assist in providing the required communication between aircraft and the ground, 33 radio stations operating for the most part on high frequencies are located at strategic points across the country and into the Arctic. These stations provide communication to both domestic and international air carriers. The international communications stations at Vancouver, B.C., Montreal, Que., Moncton, N.B., and at Goose Bay and Gander, Nfld., form a major contribution on the part of Canada to international aviation. During 1953 two new international stations, at Sydney and Yarmouth, N.S., were placed in operation to provide very high frequency coverage to many international airlines flying the Gander-New York route. The services provided by these international stations may be divided broadly into three classes: (1) communication facilities for Meteorological Services; (2) communication facilities for the Air Traffic Control Services; and (3) facilities for the benefit of the airline operating agencies to provide communication with their aircraft and between their despatch offices.

Since Class 3 is provided solely for the convenience of the airline operating agencies, a system of charges has been introduced to recover from the airlines the cost of providing this portion of the service. The charge is \$13 per aircraft per oceanic crossing. Revenue for the year ended Mar. 31, 1953, was approximately \$195,000.

Very High Frequency Communications.—Owing to the overcrowded conditions of the high frequency portion of the radio spectrum and to the fact that communication in the very high frequency portion of the spectrum is relatively free from atmospheric interference, progress is being made in providing air-ground communications on the latter frequencies. Very high frequency air-ground communication facilities are now provided at 75 range stations and all 21 airport control towers. Very high frequency equipment has been provided also in all control towers and in a large number of airport vehicles to facilitate direction to traffic on the airport surface.

Weather Reporting Stations.—Weather reporting stations are located at strategic points throughout the country from coast to coast and into the Far North. Reports from these stations enable meteorological personnel to forecast weather trends that are of great importance to both domestic and transoceanic flying operations. Some of these stations are located in remote areas with which radio is the only means of communication. At such points, radio stations are established to enable the weather reports to be rapidly forwarded to meteorological offices where the data are correlated. Four such communications stations are located at Dease Lake, B.C., Nitchequon and Indian House Lake, Que., and Coppermine, N.W.T.

Marine Communications.—Two coast stations operating on both medium and high frequencies are maintained in conjunction with the aeronautical stations at Seven Islands, Que., and Goose Bay, Nfld., for the exchange of communications between ships and the shore. Communications are conducted by both radiotelegraph and radiotelephone. Another station at Frobisher, N.W.T., provides radiotelephone facilities on high frequencies only.

Improvements in Radio Aids to Air Navigation.—A decision was reached during 1953 to equip the Montreal to Windsor airway with VHF omnidirectional ranges. This type of facility enables the pilot in the aircraft to select, at will, his desired course. These stations operate in the very high frequency band between the portion reserved for the ILS localizers and that portion used for very high frequency aeronautical communications.

Specifications for the radio equipment have been prepared and put out for tender. A mobile omnidirectional range has been constructed so that sites for permanent installations can be flight-tested before they are approved. A contract has been let for a ground-controlled approach system for Gander airport. Preliminary work on the design of buildings, towers and underground cable system is under way. Site problems in connection with this installation are also under discussion.

Negotiations were completed with the Civil Aeronautics Administration of the Government of the United States whereby they installed, in an aircraft owned by the Department of Transport, a radio installation capable of flight-testing VHF omnidirectional ranges, 1,000 megacycle distance-measuring equipment and instrument-landing systems.

Wireline Services.—The Airway Traffic Control interphone system was expanded to satisfy requirements stemming from an increasing volume of both civil and military air operations. Telecommunications Division teletype circuits were revised to facilitate the handling of air operational traffic. Additional local teletype, telephone and control-line facilities were engaged to meet new and increased requirements of the Branch. Major revisions to and repair of various government-owned control lines were undertaken.

Other Communication Facilities.—Public address systems were provided for Air Terminal Buildings and major revisions to several existing systems were undertaken. Co-ordination of various wireline service requirements was undertaken. Existing systems, such as pneumatic tube facilities, were analysed and evaluated.

Establishment was initiated of a National Weatherfax System to be used for transmitting weather data in the form of maps by wire line to designated stations across the country. Equipment considered to best suit requirements was selected for this network.

Section 3.—The Canadian Broadcasting Corporation

The history of the Canadian Broadcasting Corporation is given in the 1947 Year Book, pp. 737-740. The Corporation operates under authority of the Canadian Broadcasting Act, 1936, and is headed by a Board of 10 Governors, chosen to give representation to the principal geographic divisions of Canada, and a full-time chairman. The Board determines and supervises policy but day-to-day operations and executive direction are the responsibility of the General Manager.

The organization of the CBC consists of the following divisions: Program, International Service, Engineering, Commercial, Press and Information, Broadcast Regulations, Station Relations, Personnel and Administration, and Treasury.

Under the Canadian Broadcasting Act, 1936, the CBC is responsible for regulations controlling the establishment of networks and the proportion of time that may be devoted to advertising in broadcast programs. The CBC neither exercises nor authorizes any private station to exercise on its behalf censorship of any broadcast program. The responsibility for seeing that the regulations are observed rests with the individual station management.

Frequency Modulation.—The development of frequency modulation is given in the 1948-49 Year Book, p. 773. On Apr. 1, 1953, there were five CBC and 29 privately owned frequency modulation stations in operation.

Television.—Television in Canada is being developed on the same basic principles that governed the establishment of the national radio system—a combination of public and private ownership and operation of transmitting stations, co-operating in extended program coverage over a vast area.

The first two television transmitters and program production centres of the Canadian Broadcasting Corporation began regular service at Montreal and Toronto in September 1952 (Stations CBFT and CBLT). Another station (CBOT) was opened in June 1953 at Ottawa and connected at once with the other stations by microwave relay, thus forming the first direct-connection television network in Canada. These three stations, situated in the most densely populated areas of Canada, cover more than 40 p.c. of the Canadian population.

Other CBC television stations are planned for Vancouver, Winnipeg and Halifax. In a statement of policy on television development (Dec. 8, 1952) the Government announced that applications for licences to establish privately owned television stations would be accepted for areas not now served or those to be served, as listed above, by publicly owned CBC stations. The object is to provide television in as many different areas of Canada as possible as quickly as possible and, therefore, at the present time, two stations will not be licensed to serve the same area.

At a meeting of the CBC Board of Governors in April 1953, the issue of licences for the operation of privately owned television stations at Sydney, N.S., Moncton, N.B., Quebec, Que., and at Hamilton, London, Windsor and Sudbury in Ontario was recommended to the Minister of Transport.

The Government announced in February 1953 that the radio-listener licence fee of \$2.50, established at the inception of the national broadcasting system, would be abolished and that there would be no licence fee to be paid by the owners of television sets. Instead, revenues of the Canadian Broadcasting Corporation will come from statutory grants provided by the Federal Government, from the existing excise tax on radio and television sets and tubes and from the sale of advertising time. The income of privately owned commercial television stations will come exclusively from the sale of advertising time to sponsors. As in the case of radio, privately owned television stations will be provided with a certain number of hours of CBC programs each week, free of charge, and will benefit from a share of the income from commercial programs sold on a network basis. Until such time as extensive network facilities become available in Canada, distribution of programs will be made by kinescope recordings.

Broadcasting Facilities.—Under Sect. 24 of the Canadian Broadcasting Act, the CBC is required to review all applications for licences for new stations and applications for increases in power and for changes in frequency or location. Two considerations are involved: (1) non-interference with the present and proposed facilities of the CBC, and (2) that high-power transmission facilities, on both longwave and shortwave bands, are reserved for use by the CBC. Within these limitations, it is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

The CBC operates three networks: the Trans-Canada and Dominion networks serving English-language audiences from the Atlantic to the Pacific, and the French network serving French-language listeners in Quebec, Ontario and the Prairie Provinces. The French network's program service was extended to French-language stations in Western Canada during the summer of 1952, and the construction of a station at Moncton, N.B., which will carry the French network to listeners in that area, is planned.

The Trans-Canada network is made up of 24 basic stations—11 CBC-owned and 13 privately owned. There are 16 supplementary stations, four of which are CBC-owned Newfoundland stations. The Dominion network consists of 31 basic stations of which 30 are privately owned. Seventeen supplementary privately owned stations receive Dominion network service. The French network has three basic CBC-owned stations, and 18 privately owned affiliated supplementary stations.

In 1953, the CBC had 20 stations, eight of which had 50,000-watt transmitters. In order to present programs at suitable times and to give expression to varying interests in the six regions, CBC maintains regional offices and production facilities at St. John's, Nfld., Halifax, N.S., Chicoutimi, Quebec City and Montreal, Que., Ottawa and Toronto, Ont., Winnipeg, Man., Edmonton, Alta., and Vancouver, B.C.

6.—Broadcasting Stations of CBC Networks, as at Apr. 1, 1953

CBC International Service (Shortwave).—The International Service, inaugurated on Feb. 25, 1945, is operated by the CBC on behalf of the Canadian Government. Its aim is to tell the people of other countries about Canadian life and thought and to help unify the western world in the defence of freedom.

The International Service, now in its ninth year of operation, has grown to meet the requirements of Canada's expanding interest and influence abroad. The two 50,000-watt transmitters at Sackville, N.B., are linked by approximately 600 miles of land lines with studio and program headquarters in the Radio Canada Building, Montreal, Que., from which programs are broadcast daily in English, French, German, Dutch, Danish, Norwegian, Swedish, Finnish, Italian, Spanish, Portuguese, Czech, Slovak, Russian, Ukrainian and Polish. With technical facilities transmitting a signal unequalled in Europe by any other from the North American Continent, the International Service has succeeded in reaching increasingly large audiences in Europe, Central and South America, the Caribbean and the South Pacific area.

More than 200,000 letters have been received from listeners in all parts of the world attesting to the strength of the International Service signal and to a wide interest in Canada and Canadian programs. Many listeners request specific

information on a variety of topics ranging from trade conditions to social and educational matters. These inquiries are answered by the language sections or referred to the government department directly concerned. Reception reports are also verified.

In addition to broadcasting Canadian programs more than 15 hours daily, the International Service has developed a liaison with broadcasting organizations in other countries so that an increasing number of programs are relayed over national networks, thus reaching an even wider audience. Each week the *Voice of Canada* broadcasts programs to the Canadian Armed Forces in Europe and Korea and provides, as well, special programs on tape for Canadian Forces at sea.

Each month, 120,000 illustrated program booklets designed for audiences in Europe and in Latin America are sent to listeners, upon request, by the International Service. These booklets contain broadcast schedules and program details in various languages.

Domestic Program Service.—During the year ended Mar. 31, 1953, 75,797 programs representing 24,926 hours of broadcasting were presented over the CBC Trans-Canada, Dominion and French networks. Of the total broadcasting hours, 78.7 p.c. were devoted to non-commercial and public-service programs and the remainder to commercial presentations. Of the total broadcasting hours in 1952-53, 66 p.c. was scheduled on the Trans-Canada network; the Dominion network released more than 11 p.c. and the remainder was released on the French network.

The CBC originated and produced 82.7 p.c. of its network broadcasts. Of the remainder, 2.6 p.c. came from private stations and 14.7 p.c. were exchange programs from the United States and the British Broadcasting Corporation. Various categories of light music made up the greatest number of broadcast hours, followed in order by drama and feature, news, classical music, talks, variety, agriculture programs, women's programs, semi-classical music, educational broadcasts, children's programs, religious periods, dance music, sports programs, old-time music, symphony music, band music, sacred music, prose and poetry, and opera. Table 7 shows the proportion of time devoted to sustaining programs as compared with commercial programs and analyses those made up of music as compared with the spoken word.

7.—Classification of CBC Programs, Year Ended Mar. 31, 1953

Note.—Dashes in this table indicate that no programs were reported under these particular items.

Finances of the CBC.—A net surplus of \$376,360 was recorded for the year ended Mar. 31, 1953, after providing for depreciation and obsolescence. The Sound Broadcasting Service realized an operating surplus of \$2,939,479 for the year, while the Television Service sustained an operating loss of \$2,563,119.

Income of the Sound Broadcasting Service included the statutory grant, radio licence fees, commercial broadcasting, interest on investments and miscellaneous revenues. Except for earned revenues of \$585,497, the Television Service was financed by loans. A third loan in the amount of \$2,000,000 for the Television Service was authorized under Appropriation Act, No. 4, 1952, and is to be amortized by 30 semi-annual instalments commencing Jan. 1, 1958.

Capital expenditure for the Sound Broadcasting Service amounted to \$712,219, the main expenditure being for the Carman and Lulu Island transmitters and the Montreal, Toronto and Winnipeg studios. Fixed assets costing \$239,947 were written off, the principal item being the Verchères transmitter which was destroyed by fire. The Television Service had expenditures of \$1,875,935 on capital account. The major portion of these expenditures were required to complete the television production centres at Montreal and Toronto.

The CBC operates the International Service on behalf of the Government of Canada and all maintenance and operational costs are borne by the Government. These costs are not considered as chargeable to the CBC because the annual statutory grant and the revenue from licence fees are used only to serve listeners within Canada. Gross operating expenditure in the year ended Mar. 31, 1953, exceeded 1952 expenditure by \$103,159. The value of Crown assets in the custody of the Corporation increased \$85,466 during the year after write-offs amounting to \$6,373.

Music and Drama.—Music and drama are two of the chief items in the CBC schedules. Music makes up about 50 p.c. of the network programs, while those in the 'drama and feature' category take up the largest percentage of time among spoken-word programs. High-quality programs of both types are heard frequently at good listening hours. Apart from regular broadcasts by Canadian symphony orchestras, the Metropolitan Opera and similar programs, much fine music is presented on CBC Wednesday Night—an evening of serious programming on the Trans-Canada network—and on Monday evenings by the recently formed CBC Symphony Orchestra. Chamber music by various groups, as well as choral music originating in many Canadian points and recitals by Canadian artists and those of international reputation, are important features of the music schedules. Productions by the CBC Opera Company (which in the 1952-53 season included *Il Trovatore*, *School for Fathers*, *The Prisoner*, *Gianni Schicchi*, *Carmen*, *The Rake's Progress* and *Falstaff*) and by the CBC Light Opera Company (which has presented many of the world's favourite musical comedies and Gilbert and Sullivan operettas) are heard throughout the season.

During an average year more than 1,000 plays are produced by the CBC for its radio networks. Chief among these are the annual *Stage* series broadcast Sundays to a national audience, and the longer dramas on CBC Wednesday Night. In this category, plays have ranged from adaptations of the humorous stories of Stephen Leacock to two-hour performances of Shakespearean plays. CBC Wednesday Night has also introduced the radio anthology, an evening of prose, poetry, drama and music woven about a central theme.

Lighter fare is broadcast from production points across Canada and includes a high percentage of works by Canadian writers, both English and French. A highlight of French network drama productions during the 1952-53 season was

the performance of 20 original one-hour plays by Canadians—the three prize-winners and the next best entries in the previous season's play-writing competition—under the title *Le Théâtre du Grand Prix*. *Le Théâtre de Radio-Canada* presented a series of 22 adaptations of plays by Molière, Beaumarchais, Shakespeare, Pirandello and others, as well as original plays by Canadian authors. Fifty plays, all by Canadians, appeared under the title *Nouveautés dramatiques*.

Section 4.—Privately Owned Radio Broadcasting Stations*

Privately owned (non-government) broadcasting stations began operations during the early 1920's, about 12 years before any other broadcasting service was available in Canada. By 1929, 65 of these stations, operating mainly in non-metropolitan areas, provided regular broadcasting service to Canadian communities. In 1953, such stations numbered 139, with a total wattage of 382,750 in daytime and 354,900 at night. Operating in conjunction with AM stations are 29 FM stations with combined power of 50,045 watts. In addition, there are eight shortwave stations operating in conjunction with AM stations, having a combined wattage of 6,685.

Generally, the privately owned stations are limited in power to 5,000 watts, many operating at 1,000 watts and some at 250 watts. Two non-government stations (CFRB Toronto and CKLW Windsor) have, since 1948, operated at 50,000 watts. Privately owned stations serve, primarily, the localities in which they are situated, the nature of the "community" served varying with circumstances. Many such stations are located in relatively small urban centres. Here, however, they serve not only the urban centre population but a larger population located in surrounding rural areas. Others serve medium-sized and metropolitan cities and, in addition, the population of cities or towns adjacent to the centre in which the station is located together with rural audiences in districts between or beyond the urban areas.

Privately owned stations have a combined capital investment currently estimated at approximately \$30,000,000, employ more than 3,800 persons, and disburse in salaries and wages an estimated \$10,000,000 annually. Revenue is obtained entirely from commercial advertising and these stations receive no part of the special 15-p.c. excise tax charged against the purchase of receivers and parts. The privately owned stations are required to pay transmitter licence fees to the Canadian Broadcasting Corporation; these totalled approximately \$187,000 in the year ended Mar. 31, 1952.

Recent years have shown a marked increase in the interest taken in broadcasting at commercial, political and legal levels, since it has become more generally recognized that broadcasting is a form of publication and a basic means of mass communication in North America. A review of this development may be found in Minute Book No. 5 of the 1951 Special Committee on Radio Broadcasting, Nov. 28, 1951, and in Minute Book No. 9 of the 1953 Special Committee, Apr. 29, 1953.

According to figures submitted to the Royal Commission on National Development in the Arts, Letters and Sciences in April 1950, the privately owned stations showed a net profit of 9 p.c. in 1948, figured as a percentage of capital, as against 7 p.c. in 1947 and 8 p.c. in 1946. The 1948 profit, as a percentage of operating

* Revised by T. J. Allard, Executive Vice-President, Canadian Association of Broadcasters, Ottawa.

revenue, was 10 p.c. as against 8 p.c. in 1947 and 10 p.c. in 1946. These figures are based on reports obtained by the Department of Transport from 109 stations in 1948, 108 stations in 1947, and 88 stations in 1946. Thus, the average net profit per station was \$12,516 in 1948, \$8,597 in 1947 and \$11,228 in 1946. Of the 109 stations reporting in 1948, 79 showed an aggregate surplus and the remainder an aggregate loss. While no official compilations have been prepared since that time, unofficial estimates indicate that the 1953 position was relatively the same in terms of percentages.

Administration.—The non-government stations operate under the Canadian Broadcasting Act which is administered by the Canadian Broadcasting Corporation, and under regulations made by the CBC, in addition to the Radio Act which is administered by the Department of Transport, and regulations made thereunder by that Department. Proof-of-performance statements showing that public service obligations have been fulfilled, together with financial statements, must be filed annually with the CBC in the former instance and the Department of Transport in the latter. Regulations limit the amount of advertising that may be carried in any spot announcement or program and the number of announcements that may be carried in any given period of time. Program schedules must be approved in advance by the CBC and food, drug and medicine continuity must be approved by the Department of National Health and Welfare.

Licences of the privately owned stations, valid for three years, are granted by the Government of Canada upon recommendation of the Board of Governors of the Canadian Broadcasting Corporation. The Royal Commission on National Development in the Arts, Letters and Sciences recommended that the period be increased to five years and this recommendation is currently under review by Government authorities. The sale or transfer of any stock or shares held in any broadcasting station must be approved by the Government of Canada.

Network Operations.—Network operation in Canada is at present restricted to the CBC in both AM and television fields. The CBC also has sole right, except in the case of four stations, to bring in commercial and other network programs from the United States. Many privately owned stations, however, serve as outlets—either basic or supplementary—for CBC network programs. On occasion, all stations are required to carry CBC or other programs.

Television.—At the end of October 1953, there were nine non-government television stations licensed in Canada, located at: Regina, Sask.; Windsor, London, Sudbury and Hamilton, Ont.; Rimouski and Quebec City, Que.; Saint John, N.B.; and Sydney, N.S. The same terms of licence and regulations applying to AM broadcasting apply also to telecasting, with the additional requirement that the television licensee must carry a minimum of 10½ hours weekly of CBC-produced material. Government policy permits the licensing of one non-government station in any area in Canada other than Toronto, Montreal, Ottawa, Vancouver, Winnipeg and Halifax, these areas being reserved exclusively for the Canadian Broadcasting Corporation. On Mar. 30, 1953, the Government announced in the House of Commons that consideration was being given to licensing of two or more non-government stations in any area in Canada, including those areas presently reserved for the Canadian Broadcasting Corporation.

PART IX.—THE POST OFFICE

The Canada Post Office Department was created at the time of Confederation in 1867 by the Canada Post Office Act to superintend and manage the postal service of Canada under the direction of a Postmaster General. For almost a century prior to Confederation, postal services in the Canadian provinces had been controlled by the British Postmaster General and administered by his deputies. Under the French régime a courier service had been organized as early as 1703 between Quebec, Three Rivers and Montreal, while in 1734 a post road was constructed over the same route and post houses, complete with post horses and vehicles, were established for the use of travellers. In 1851, the control of their post offices was assumed by the different provinces of British North America and at Confederation, these systems merged to form the Canada Post Office.

Functions.—The basic task of the Canadian Postal Service is the handling and transmission of postal matter—letters, parcels, newspapers, magazines, etc.—and in discharging this duty it maintains a wide variety of services—post offices and air, railway, land and water transportation facilities.

This basic task involves many associated functions which include the sale of postage stamps and other articles of postage; the furnishing of information to the public respecting postage rates and other postal matters; the registration of letters and other articles of mail; the insuring of parcels; the acceptance of C.O.D. articles for mail and dispatch; the sorting, making up and dispatching of ordinary and registered mail to other offices; the sorting and delivery of incoming mail of all kinds; and the transaction of money-order and Post Office Savings Bank business.

All functions of the Postal Service, as far as the public is concerned, are centred in the post offices, of which 12,254 were in operation at Mar. 31, 1953, as against 12,305 at the same date in 1952. Postage paid in 1952-53 by means of postage stamps amounted to \$67,182,548 (\$65,093,099 in 1952). Post office money orders are issued for any amount up to and including \$100 at more than 7,000 post offices, for payment in Canada or in almost every country in the world. Orders payable in Canada only for amounts under \$16 are issued at more than 4,000 additional post offices. Post Office Savings Banks are in operation in all parts of the country and, on Mar. 31, 1953, had total deposits of \$39,322,229, an increase of \$1,290,997 over the \$38,031,232 deposited in 1952.

Post offices are established for the transaction of all kinds of postal business wherever the population warrants. The post office is a complete entity in rural districts and smaller urban centres. In the larger towns and cities there is a main post office and, if size of population calls for extra services, postal stations and sub-post offices are operated. Letter-carrier delivery is given in 127 cities and towns by over 5,100 uniformed letter carriers.

Postal stations are maintained on the same lines as the main post offices and perform full postal business, including general-delivery service and a post-office lock-box delivery as well as letter-carrier delivery service, accommodating the surrounding district.

Because of its widespread facilities, it has been found expedient for the Post Office to assist other Government Departments in the performance of certain tasks that include the sale of unemployment insurance stamps, the collection of Government annuity payments, the distribution of income-tax forms, Civil Service application forms and the display of Government posters.

Organization.—The Canada Post Office is divided into two parts: the Operating Service and Headquarters at Ottawa. The Operating Service is organized into five regions each under a Regional Director, who is the field representative of the Deputy Postmaster General. There are four Headquarters Branches, viz., Administration, Operations, Transportation and Financial, each under a Director.

Operating and secretarial features in the operating field affecting the post offices and local mail services in urban centres are taken care of by the local Postmaster. District office functions relating to services in the district, and all inspections and investigations, are under District Post Office Inspectors situated at strategic centres across the country.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont. (the most southerly point of Canada), to settlements and missions far within the Arctic.

Canada's air-mail system provides several flights daily from east to west and constitutes a great air artery from St. John's, Nfld., to Victoria, B.C., intersected by branch lines and connecting lines radiating to every quarter and linking up with the United States air-mail system. Since July 1, 1948, all first-class domestic mail up to and including one ounce in weight has been carried by air between one Canadian point and another, whenever delivery can thus be expedited. Air-stage service provides the sole means of communication with the outside for many areas in the hinterland. There were approximately 29,500 miles of air-mail and air-stage routes in Canada in 1953 as compared with 24,000 miles in 1952.

The principal means of mail transportation is the railway mail service which operates along about 40,000 miles of track and, in 1953, covered over 47,380,000 of track mileage. The railway mail service employed a staff of 1,332 mail clerks in 1953. This staff prepares the mails for prompt delivery and dispatch while *en route* in the railway mail cars. Like its air-mail service, Canada's railway mail service is one of the most extensive in the world.

The rural mail delivery organization provides direct postal facilities to residents in the rural sections of the country: approximately 5,240 rural mail routes were in operation in 1953, involving about 120,950 route miles and serving 404,277 rural mail boxes. Rural mail routes are generally circular in pattern and average about 23 miles in length. About 4,700 side services were in operation in 1953 to transport mail between post offices, railway stations, steamer wharves and air ports, while 3,050 stage services operated to convey mail to and from post offices not located on railway lines. In 1953, there were approximately 500 city mail services, transporting mails to and from post offices, postal stations and sub-post offices, collecting mails from street letter-boxes and delivering parcel post. In all, about 13,450 land mail service couriers are employed and travel in the neighbourhood of 50,000,000 miles annually. Land mail services are performed under a contract system, the contracts being awarded to the person submitting the lowest tender and competent to provide all the requisite equipment.

The increase in postal business is one of the impressive features of Canada's economic development during the past ten years. From \$55,477,159 in 1942, gross revenue has increased year by year to \$129,388,365 by Mar. 31, 1953, an all-time high.

Section 1.—Post Office Statistics

Tables 1, 2 and 3 give the numbers of post offices in operation together with revenue and expenditure for the past few years.

Postage.—The gross revenue receipts shown in Table 2 are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during each of the latest five fiscal years was: \$56,317,570 in 1948-49, \$57,249,306 in 1949-50, \$57,178,573 in 1950-51, \$65,093,099 in 1951-52 and \$67,182,548 in 1952-53. Receipts from postage meter or postage register impressions and postage paid in cash by other means were as follows: \$33,315,148 in 1948-49, \$36,292,710 in 1949-50, \$39,979,297 in 1950-51, \$48,945,565 in 1951-52 and \$52,733,682 in 1952-53.

Section 2.—Auxiliary Postal Services

Auxiliary postal services include the issuing of money orders and the operation of the Post Office Savings Bank.

Table 4 shows the amount of money-order business conducted by the Postal Service in recent years. A table showing the financial business of the Post Office Savings Bank will be found in the Chapter on Currency and Banking, p. 1144.

4.—Operations of the Money-Order System, Years Ended Mar. 31, 1944-53

NOTE.—Figures for 1868-1943 will be found in the corresponding table of previous Year Books beginning with the 1911 edition.

PART X.—THE PRESS

The Canadian Press.—The Canadian Press is the co-operative news-gathering association through which the daily newspapers receive their basic world and Canadian (other than local) news reports.

The Canadian news is essentially an exchange between regions, provided by the papers, edited by CP staffs and transmitted over CP wires. This is supplemented by direct CP staff reporting, particularly at Ottawa where Parliament is covered directly by CP men for the association's 92 members. World news is obtained from Reuters and the Associated Press, supplemented by a bureau at London, England, and by another at New York, U.S.A., where Canadian editors route AP, Reuters and CP copy into Canada.

Two recent developments in connection with CP news reporting are noteworthy:—

(1) *Service in French*.—Since September 1951, CP has been serving French-language members in the French language. A bilingual staff at Montreal translates, minute-by-minute, in-coming world and Canadian news and relays it over teletypes (equipped with accents) to members at Chicoutimi, Quebec, Three Rivers, Granby, Sherbrooke and Montreal, Que., and Ottawa, Ont.—11 in all. A twelfth French-language member, at Moncton, N.B., is to be added in 1954.

(2) *Teletypesetter*.—Early in 1952, CP began transmitting to some of its members by teletypesetter. Under this system, news sent from a central point may be automatically cast into type simultaneously at several points through use of coded tape produced at the receiving end by the sending operation. The copy also appears on the teletypes in typewritten form.

By late 1953, CP's news report was being made available to 69 of its 92 members by transmission methods making possible this automatic type-setting facility. Of these, 51 were setting their type from teletypesetter tape; the others continuing to set manually from the teletype copy.

Press Statistics.—The following tables are based on data obtained from *Canadian Advertising*. One serious difficulty has been encountered in connection with the compilation of circulation figures. In the case of daily newspapers, reliable circulation figures are relatively easy to obtain since, in their own best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation requirements. In such cases, A.B.C. 'net paid' figures were used. However, it is difficult to obtain reliable circulation figures for many weekly newspapers that do not subscribe to the Audit Bureau. In these cases, total circulation (paid and free) was taken where such figures were supported by sworn statements or some other reliable record.

In compiling magazine circulation, total net paid figures, as reported by publishers to the Audit Bureau (including bulk sales), were used. In the relatively few cases where such figures were not available, publishers' minimum claims or sworn statements were accepted.

Daily Newspapers.—Daily newspapers are published in Canada in three main language groups: English, French and foreign. French daily newspapers have, as would be expected, a wide circulation in the Province of Quebec and some of the largest of these papers have been established in that Province for over 60 years. Ten of the 12 French-language newspapers published in 1952 were established in Quebec Province; the other two were in the Provinces of Ontario and New Brunswick.

Many of the daily newspapers extend their influence over the rural areas surrounding the cities where they are published. In this respect, they supplement the weekly newspapers which feature essentially local news and serve the smaller cities, towns and rural areas only.

The larger metropolitan dailies, especially those of Montreal, Que., and Toronto, Ont., have built up considerable circulation in areas outside their own cities. This is especially true since rapid freight transport by highway and latterly by air has become more common. For instance, Montreal and Toronto morning papers (printed late the previous evening) are now transported to Ottawa and delivered in the morning in competition with the local morning papers. Since these large metropolitan dailies command exclusive feature services that the dailies of the smaller cities cannot afford, they are thus placed in an advantageous position in competition with the local dailies.

*Weekly Newspapers.**—Weekly newspapers circulate within relatively restricted areas around their publication centres. These cater to a limited local interest but, within the areas they serve, they exercise an important influence. Canada is well served by foreign-language weekly newspapers; in 1952, they had a stated circulation of 242,382 copies, among which Ukrainian papers had a circulation of 62,743 copies, German 32,484, Yiddish 28,465, and Polish 22,372 copies.

* Includes a very few semi- and tri-weekly newspapers.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated: it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including those directed to the amusement of the people, such as theatres, sports, etc. However, not all phases of this broad field are covered here though, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The Index will be found useful in this respect.

Section 1.—Grain Trade

Subsection 1.—Marketing Problems and Policies, 1952-53

New records in volume of production, farmers' marketings and exports of Canadian grain were established in the crop year ended July 31, 1953. Record wheat and barley crops, estimated at 687,900,000 bu. and 291,400,000 bu., respectively, together with above-average yields of other grains, were the main factors

in establishing a new record volume of production. The harvesting of this unprecedented volume of grain meant the continuation of the tremendous load placed on all grain-handling facilities by the 1951 crop, much of which was out of condition when harvested in the autumn of 1951. In addition, abnormally large quantities of the 1951 crop were harvested and marketed in the spring of 1952, resulting in unseasonably large stocks of grain in country elevators at the beginning of the 1952-53 crop year. Despite the lack of adequate elevator space at a time when new crop deliveries normally commence in volume, the continuation of the high degree of efficiency and co-operation achieved in handling the 1951 crop under unusually adverse conditions enabled farmers in Western Canada to deliver a record volume of grain in 1952-53. Preliminary marketing data indicate that a total of 812,000,000 bu. of all grains was delivered in Western Canada in 1952-53 as against the previous record of 737,000,000 in 1951-52.

Marketing arrangements for wheat, oats and barley in Western Canada continued under the system of compulsory crop-year pools administered by the Canadian Wheat Board while rye and flaxseed in Western Canada and all grains in Eastern Canada continued to be sold on the open market. Combined exports of wheat, oats, barley, rye and flaxseed (including the grain equivalent of wheat flour, rolled oats and oatmeal) reached a record level of 582,800,000 bu., compared with 506,100,000 bu. in 1951-52. Despite this unprecedented volume of exports and a high level of domestic utilization, total carryover stocks of wheat, oats, barley, rye and flaxseed at July 31, 1953, amounted to 625,000,000 bu., an increase of 50 p.c. over the July 31, 1952, level and second only to the record 823,000,000 bu. on hand at July 31, 1943.

Wheat.—Supply and Disposition.—Stocks of Canadian wheat on hand at the beginning of the 1952-53 crop year amounted to 217,200,000 bu. These stocks, the largest since 1945, represented the fourth consecutive annual increase from the abnormally low level of 77,700,000 bu. on hand at July 31, 1948. The harvesting in 1952 of a record wheat crop, estimated at 687,900,000 bu., together with carryover stocks thus gave total crop-year supplies of 905,100,000 bu., second only to the record 980,400,000 bu. in 1942-43.

¹ Less than 50,000 bu.

Exports of wheat continued in very heavy volume in 1952-53, reaching a total of 385,500,000 bu. of which 56,500,000 bu. consisted of wheat flour in terms of grain equivalent. The combined total exports of wheat and flour in 1952-53 were

29,700,000 bu. greater than in 1951-52 and were second only to the record 407,600,000 bu. exported in 1928-29. Domestic utilization also was at a relatively high level and is tentatively estimated at some 156,800,000 bu. Carryover stocks at July 31, 1953, rose sharply to 362,700,000 bu.

Price and Marketing Arrangements.—Marketing of Western Canadian wheat during 1952-53 was again conducted by the Canadian Wheat Board on a one-year pool basis with the initial payment set at \$1.40* per bu. Effective Mar. 2, 1953, the initial payment for spring wheat other than Durum was increased to \$1.60 per bu. In the case of Durum wheat, the initial payment was increased to \$1.65 per bu. as an incentive to induce farmers to grow more of this variety which is currently in short supply. Adjustment payments of 20 cents per bu. for wheat other than Durum and 25 cents per bu. for Durum wheat were made on all wheat delivered to the Board between Aug. 1, 1952, and Feb. 28, 1953. An interim payment of 12 cents per bu. on all grades (amounting in total to some \$64,000,000) was announced on Sept. 11, 1953. As in former years, final payments to producers for wheat delivered to the 1952-53 pool will be dependent upon the average price at which the Board has been able to sell the various grades.

The 1952-53 crop year coincided with the fourth and final year of the first International Wheat Agreement. Under its provisions Canada had a guaranteed export quota of 235,000,000 bu. for 1952-53 and, according to the final report of the International Wheat Council on the year's transactions, Canadian sales registered under the Agreement totalled 231,100,000 bu. The United Kingdom purchased 112,500,000 bu. or about 49 p.c. of the Canadian total. All sales against 1952-53 quotas under the Agreement were made at the maximum price of \$1.80 (U.S. funds) plus a carrying charge of 6 cents per bu. Since the Canadian dollar remained at a premium over the United States dollar throughout the crop year, the price in terms of Canadian funds remained somewhat below \$1.80, varying with daily fluctuations in the exchange rate.

In addition to sales under the Agreement, substantial quantities of Class II wheat† were sold, with the largest amount in this category, some 23,000,000 bu., going to the United States. The combined Canadian exports of 385,500,000 bu. of wheat and flour went to 85 countries, territories and colonies during the crop year.

Sales of wheat for domestic use during 1952-53 continued to be made at the same prices as those under I.W.A. up to Mar. 17, 1953. Effective May 19, 1953, and continuing to the end of the crop year, the domestic price was \$2.05 per bu., except when the Board's Class II price fell below \$2.05 in which case domestic sales were made at the Class II price. Prices for Class II wheat advanced gradually from about \$2.15 per bu. at the beginning of the crop year to a high of \$2.31½ on Nov. 14, 1952. After that date there was a gradual decline to a low of \$1.98 on June 30, 1953, followed by somewhat firmer prices in July.

Other Grains.—*Supply and Disposition.*—Preliminary data on supplies and disposition of the major Canadian grains for 1952-53 together with revised and more detailed data for 1951-52 are set out in Table 2. As a result of increased

* All wheat prices quoted are for No. 1 Northern, basis in store Fort William-Port Arthur or Vancouver.

† Wheat exported outside the provisions of the International Wheat Agreement.

carryover stocks for all grains and increased production for all but oats, total supplies of Canadian grain in 1952-53 were substantially above 1951-52 levels despite a slight decrease in supplies of oats.

Exports of both oats and barley continued in heavy volume during 1952-53. Although exports of oats (including rolled oats and oatmeal) at 65,400,000 bu. were somewhat lower than in 1951-52, barley exports (including malt in barley equivalent) set a new record of 122,100,000 bu., surpassing by a wide margin the record of 73,500,000 bu. set only the year before. Substantial increases over the relatively small 1951-52 totals were also registered in exports of both rye and flaxseed. Despite such increased exports and a relatively high level of domestic use, new record stocks were set at July 31, 1953, for barley and rye while oats stocks were second only to the record 149,300,000 bu. on hand at July 31, 1943.

³ Details not available until final disposition data are known.

Price and Marketing Arrangements.—Marketing of Western Canadian oats and barley during 1952-53 was again carried on through compulsory crop-year pools administered by the Canadian Wheat Board. Initial payments were made on the basis of 65 cents per bu. for No. 2 C.W. oats and 96 cents per bu. for No. 3 C.W. 6-Row barley, both prices basis in store Fort William-Port Arthur. In the case of barley, initial payments were increased to \$1.11 for No. 3 C.W. 6-Row barley, effective Mar. 2, 1953, and adjustment payments of 15 cents per bu. were made on all grades of barley delivered to the Board during the Aug. 1-Feb. 28 period.

Producers in Western Canada delivered 118,967,962 bu. of oats and 164,886,884 bu. of barley to the 1952-53 pools. Total prices (basis in store Fort William-Port Arthur) realized by producers for representative grades, after deducting carrying charges in country and terminal elevators, Board administrative costs, etc., but before deducting the 1-p.c. Prairie Farm Assistance Act levy, were \$0.74119 per bu. for No. 2 C.W. oats, \$0.68478 per bu. for No. 1 feed oats, \$1.24492 per bu. for No. 3 C.W. 6-Row barley and \$1.12867 for No. 1 feed barley.

Subsection 2.—Miscellaneous Grain Trade Statistics

Grain Handled at Eastern Elevators.—The amount of grain handled by eastern elevators during the five crop years 1948-52 is shown in Table 3.

3.—Canadian Grain Handled at Eastern Elevators, Crop Years Ended July 31, 1948-52

NOTE.—Figures for the crop years ended 1922-29 are given in the 1931 Year Book, p. 626; for 1930-36 in the 1943-44 edition, p. 512; for 1937-42 in the 1947 edition, p. 816; and for 1943-47 in the 1951 edition, p. 830.

Lake Shipments of Grain.—The 1952 navigation season at the Lakehead closed on Dec. 18, three days later than in 1951 but still short of the record late closing of Dec. 24 established in 1923. During the 1952 navigation season, total vessel shipments of wheat, oats, barley, rye and flaxseed from Fort William-Port Arthur amounted to 450,800,000 bu., the highest since 1945 when 483,700,000 bu. were cleared from the Lakehead. Shipments of barley and oats, at 96,900,000 bu. and 92,700,000 bu., respectively, set new records for these grains.

Wheat Flour.—After reaching a peak of 28,588,000 bbl. in 1946-47, Canadian wheat flour production dropped to a post-war low of 20,259,000 bbl. in 1949-50. Production in both 1950-51 and 1951-52, however, increased to a level slightly above the average of 22,402,000 bbl. for the five crop years ended July 31, 1945. The percentage of milling capacity utilized for the crop year 1951-52 averaged 76.9 p.c. compared with 79.8 p.c. for the previous crop year.

Exports of wheat flour during recent years have followed approximately the same pattern as production, dropping from the 1946-47 peak of 16,896,000 bbl. in 1946-47 to 10,151,000 bbl. in 1949-50. Exports in 1951-52 amounted to 11,356,000 bbl., representing approximately one-half of total production.

Section 2.—Live-Stock Marketings*

Cattle marketings through public stockyards, packing plants and direct for export totalled 1,414,268 head in 1952, a decline of 10.5 p.c. from the previous year and the lowest number since 1943. Since marketings of steers were considerably higher than in 1951, the drop in cattle marketings indicates a retention of breeding stock. Exports to the United States were cut off after Feb. 25, owing to the outbreak of foot-and-mouth disease, resulting in an almost negligible export volume of live stock during 1952. Producers were encouraged to finish cattle at home whenever possible and as animals were carried to heavier weights, the average carcass weight of inspected beef was 513.4 lb., 9.3 lb. above the 1951 average. For the same reason a definite improvement took place in the quality of the output as evidenced by the fact that Choice and Good heavy steers accounted for 15.3 p.c. of total marketings as compared with 9.4 p.c. in 1951. Marketing of calves, totalling 631,478 head, was 8.4 p.c. lower than in 1951, the most pronounced drop occurring in the veal-producing province of Quebec. Hog marketings were 36.8 p.c. higher than in 1951, totalling 6,699,056 head. This was 42.0 p.c. above the previous five-year average and the largest annual movement since the record peak of 8,863,830 head in 1944. Grade A hogs accounted for only 28.5 p.c. of the total, a decrease of 2.8 p.c. from 1951, while corresponding increases were noted in the percentages of Grades B2, C and Heavies. Reversing the downward trend of recent years, sheep and lamb marketings showed an increase of 13.7 p.c., Alberta leading the way with a gain of 39.0 p.c.

* For more detailed information, see DBS annual, *Live Stock and Animal Products Statistics*, and the Department of Agriculture publication, *Annual Market Review*. Statistics of live stock and poultry are given at pp. 414-416 and 423-424, respectively, of this volume.

Section 3.—Warehousing and Cold Storage*

Warehousing ranks high among the means by which the utilities of ‘place’, ‘time’ and ‘possession’ are added to the products of industry. Its importance has been emphasized in modern times because of the introduction of cold-storage methods to the conservation of perishable foods.

The great difficulty in presenting warehousing statistics lies in the fact that it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship with merchandising. However, if the strict economic definition of warehousing is adopted then this term should be restricted to those facilities that add the utility of ‘time’ to the ‘form’ utilities that are the product of the extraction and manufacturing industries. Since the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, then they are not, in the strict economic sense, services that add the utility of ‘time’ to commodities already worked up into ‘form’. At least, since some clear line must be drawn and because separate statistics of the latter branch of storage are not available, it is considered practicable to interpret warehousing in this way.

The statistics of warehousing are shown together under one general heading in this Section. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold-storage facilities without which perishable foods

* The material in this Section was supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Technical Surveys, National Revenue and of the Dominion Bureau of Statistics.

such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers who supervise all movements into and from such places of storage.

Subsection 1.—Licensed Grain Storage

At Dec. 1, 1952, total licensed grain storage capacity amounted to 539,290,000 bu., an increase of 13,055,000 bu. over the level of Dec. 1, 1951. Licensed grain storage capacity reached a peak of 603,000,000 bu. at Dec. 1, 1943, but, following the disposal of heavy wartime stocks, declined to 482,000,000 bu. at Dec. 1, 1947. Since then, licensed grain storage capacity has increased each year.

As a result of unusually large crops in Western Canada in 1951 and 1952, a heavy strain was imposed on grain storage and handling facilities. In addition to the problem thus created, the situation was further aggravated by the large proportion of out-of-condition grain harvested in the autumn of 1951 and the abnormally large amount of grain harvested in the spring of 1952. The out-of-condition grain necessitated considerable special binning which reduced effective storage capacity, while the spring harvest resulted in unseasonably large deliveries to country elevators throughout the spring and summer of 1952 prior to the harvest of record western Canadian wheat and barley crops that autumn. As a result, almost 47 p.c. of licensed elevator capacity was occupied at July 31, 1952, at a time when the proportion occupied by grain is normally considerably less. Despite heavy export movement of wheat and barley, the proportion of capacity occupied increased during the crop year, reaching almost two-thirds of the total licensed capacity on Apr. 1, 1953.

9.—Licensed Grain Storage Capacity and Grain in Store, 1951-52 and 1952-53

NOTE.—These figures, being exclusive of stocks in transit or in eastern mills, are lower than those shown in Table 16, pp. 413-414.

¹ Excludes Newfoundland.**Subsection 2.—Cold Storage and Storage of Foods**

Cold-Storage Warehouses.—Under the Cold Storage Act (R.S.C. 1952, c. 52), as amended (R.S.C. 1952, c. 313), subsidies are granted by the Federal Government to encourage the construction and equipment of cold-storage warehouses open to the public. The Act is administered by the Department of Agriculture.

There are five classifications of cold storage warehouses in Canada: (1) public warehouses which store foods and food products and of which the entire space is open to the public; (2) semi-public, or those which store foods and food products and which, while retaining part of the space for the products of the owner, allot the remainder to the public; (3) private or those which store foods and food products and allot no space to the public, a classification that includes refrigerated space in connection with abattoirs, creameries, dairies, cheese factories and wholesale and retail distributing warehouses; (4) locker plant, where the total space is occupied by lockers for rental to the public and which may, in addition, cut, process, chill and freeze foods and food products for storage in lockers; and (5) bait depots, having space used solely or principally for freezing and storing bait for use of fishermen.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general, those owned and operated by firms trading in the goods stored in the warehouse are considered as private, though most of these places rent space to the public when it is not required for their own purposes.

¹ Includes imported butter.

Cold Storage of Fish.—Normally, stocks of frozen fish decrease gradually during the first months of the year and reach a low point at about May 1; during subsequent months they increase and reach a peak at the beginning of November. Since the great bulk of the frozen fish production takes place during the summer and early autumn months, stocks pile up in that period to form the main supply of frozen products until the heavy production period of the next season.

Stock figures at the beginning of each month in 1951 and 1952 (including Newfoundland) were as follows:—

<u>Month</u>	<u>1951</u>	<u>1952</u>	<u>Month</u>	<u>1951</u>	<u>1952</u>
	'000,000 lb.			'000,000 lb.

June 1.....	35.7	35.0			
July 1.....	38.0	46.0	AVERAGE.....	41.1	46.7

The individual item showing the most significant change in 1952 compared with 1951 is that of Atlantic Coast cod filets. Although the demand for imported groundfish filets was high in the United States, Canadian exporters were faced by increased competition from other foreign suppliers. The total holdings of British Columbia salmon were also higher in 1952 compared with 1951, and the increase was fairly evenly distributed among the various species; holdings of chum, representing the largest single increase, amounted to 300,000 lb.

Average monthly holdings of the main fish products in 1951 and 1952 (including Newfoundland) were as follows:—

<u>Group and Product</u>	<u>1951</u>	<u>1952</u>

Cold Storage of Dairy Products.—Cold-storage facilities are a necessary adjunct in the manufacture of dairy products since most of them are perishable in varying degrees. All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. If the butter produced at small country plants is not printed for immediate sale, the butter solids are disposed of or are transported to larger creameries where better refrigeration is available or to private or public cold storages in the larger urban centres.

In the case of cheese, temperature control is important in the curing process as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for 17 days' produce during the period of maximum manufacture. The cheese is then transferred to central warehouses.

Milk is placed in storage as soon as it is bottled and held until delivery. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity.

Cold Storage of Other Foods.—Before the War, the export of a substantial proportion of the apple crop early in the season, to the United Kingdom and other European countries, limited the necessity of long-term cold storage to that portion of the crop retained for domestic distribution and other export. The curtailment in export outlets in post-war years has necessitated the provision of greater long-term cold-storage capacity in order to extend the marketing period for a much larger proportion of the crop. The degree to which such facilities have increased is illustrated by a comparison of the holdings on Dec. 1, the beginning of the storage season. During the years 1943-47, the Dec. 1 stocks averaged 53 p.c. in cold storage and 47 p.c. in common storage. The average for the two years 1951 and 1952 was 81 p.c. in cold and 19 p.c. in common storage. Additional space under construction will maintain or increase the proportion of cold storage in future years.

Potatoes are generally held at production points and shipped out as needed throughout the season. While warehouse storage is quite common in parts of Prince Edward Island, Nova Scotia and New Brunswick where commercial production is centred, most of the crop is stored in frost-proof cellars and pits.

Subsection 3.—Storage of Petroleum and Petroleum Products

Bulk storage plants for petroleum and petroleum products are established at convenient distributing centres and usually on a water-front so that full advantage can be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by boat, rail or truck to smaller distributing depots or directly to retail outlets. The principal refining and distributing centres are located at or near Halifax, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver.

Subsection 4.—General Warehousing

Public Warehouses.—In 1944, the Dominion Bureau of Statistics began an annual census of the principal public warehouses in Canada. Warehousing carried on by co-operatives, packing houses and other firms operating storage facilities in connection with their own businesses are not included. Also, some companies deriving more revenue from a moving, cartage or carrier business than from warehousing are not included but are covered in the DBS report, *Motor Carriers, Freight-Passenger*. In order to show the trend in the industry, Table 14 has been prepared from data supplied by 155 firms that reported for both 1950 and 1951. Complete details are given in the DBS report, *Warehousing, 1951*.

14.—Summary Statistics of 155 Public Warehousing Firms Reporting in 1950 and 1951

Item	1950	1951	Item	1950	1951
Total revenue..... \$	20,861,029	23,981,484	Wages, regular..... \$	6,172,742	7,217,703

Employees, regular.... No.	3,017	3,105	Total salaries and wages..... \$	9,132,560	10,353,917
Employees, casual..... "	267	312			

Net occupiable space reported in 1951 by 167 firms comprised 37,457,144 cu. feet for merchandise, 17,787,385 cu. feet for household goods and 24,018,082 cu. feet of cold-storage space. Merchandise space increased 2,329,000 cu. feet, household goods space decreased 1,546,000 cu. feet, and cold-storage space was up 165,500 cu. feet over the total for 164 companies reporting in 1950.

Customs Warehouses.—Warehouses for the storage of imported goods are known as customs warehouses. These are divided into nine classes, as follows: (1) those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods while others, known as Queen's Warehouses, are used for the storage of unclaimed, abandoned, seized or forfeited goods; (2) warehouses, consisting of an entire building or part thereof, properly separated from the rest of the building by a partition, which are used exclusively for the storage of imported goods consigned to the proprietor of the building; (3) buildings or parts of buildings properly partitioned off, used for the storage of imported goods consigned to the proprietor or others, or for the storage of unclaimed or seized goods; (4) sufferance warehouses operated by the owners of vessels for the storage of in-bond goods transported by water or air;* (5) yards, sheds and buildings intended for the storage of imported coal and coke; (6) farms, yards, sheds, etc., which an importer of horses or sheep intends to use for the feeding and pasturing of imported animals other than pure-bred mares; (7) warehouses for the storage of animals, including horses for racing, and articles for exhibition or competition for prizes; (8) warehouses for clover seed imported for the purpose of being re-cleaned and prepared for a foreign market; and (9) yards, sheds, etc., which importers intend to use for the storage of goods too heavy or too bulky to be admitted to an established customs warehouse.

Subsection 5.—Bonded Warehousing and Storage of Wines

Bonded Warehousing.—The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses while only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes that are not stamped and duty paid are secured in bond. In addition to these warehouses, there are those in which no manufacturing or production is carried on but which are being used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as shops' stores.

Spirits, Tobacco and Malt in Bond.—Table 15 shows the quantities of distilled liquor, tobacco, cigars and cigarettes in bond in recent years. The yearly inventory of breweries showed an increase of total gallonage of beer in stock from 20,756,358 in 1951 to 23,388,779 gal. in 1952.

* Railway and express companies have similar facilities

15.—Distilled Liquor, Tobacco, Cigars and Cigarettes in Bond, Quarterly, 1949-53

¹ Excludes Newfoundland.

Beverage spirits, as shown in Table 16, refer to spirits released for consumption but not to industrial alcohol; malt beer does not include beer made from duty-free malt; malt used is the total malt used to produce the malt beer; tobacco includes all types of manufactured tobacco products in addition to snuff.

16.—Beverage Spirits, Malt Beer, Malt, Tobacco and Tobacco Products taken out of Bond, Destined for Consumption, 1943-52

NOTE.—The figures in this table are on a different basis from those published in previous editions of the Year Book.

¹ Duty has been paid herein on the malt.

Storage of Wines.—The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are their sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying their wines. Native wine produced and placed in storage for maturing and blending for the years 1947-51 was reported as follows:—

<i>Year</i>		<i>Ontario</i>	<i>Other Provinces</i>	<i>Total</i>
1947.....	gal.	5,517,482	570,522	6,088,004
	\$	3,871,622	424,567	4,296,189

Section 4.—Merchandising and Service Establishments*

A complete coverage of the distributive trades in Canada is attempted only as part of the Decennial Census. The results of the 1930 and 1941 Censuses of Merchandising and Service Establishments are contained in Vols. X and XI of the Census reports for those years; Vol. XI also contains data on wholesale trade. Certain information from the 1951 Census will be published in subsequent editions of the Year Book and detailed data will appear in Vols. VII and VIII of the 1951 Census reports.

Census results are supplemented by monthly, quarterly and annual surveys on the more important phases of the retail, wholesale and service trades. The 1951 Census will form a new base for these surveys and certain improvements are planned for their continuance during the 1951-61 intercensal period. Current information available on the more important phases of the distributive trades is given in the following subsections.

Subsection 1.—Wholesale Trade Statistics

Sales Indexes.—Indexes of wholesale sales are obtained from a sample of firms in nine principal consumer goods trades. This measurement of sales covers only wholesalers proper, i.e., those establishments that perform the complete functions of wholesalers and jobbers buying merchandise in large quantities on their own account and selling principally to retailers.

Wholesale sales for the nine trades were 7 p.c. higher in 1952 than in 1951, representing an increase of 262 p.c. over the 1935-39 average. The index of sales for 1952 stood at 362.2 compared with 338.6 for 1951 and 307.3 for 1950. These indexes represent dollar volume of sales unadjusted for price changes. Anticipating results from the 1951 Census of Distribution, provincial data were not compiled for Table 17.

* Revised in the Merchandising and Services Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

Operating Results of Wholesalers.—Ten wholesale trades concentrated in the consumer goods field, eight of which are comparable with those covered in the sales indexes series, are represented in the statistics on operations of wholesalers in 1951. This is the third of a biennial series on the operations of wholesalers begun in 1947.

18.—Operating Results of Selected Wholesale Trades, 1951

NOTE.—All figures except stock turnover are percentages of net sales.

Kind of Business	Cost of Goods Sold	Gross Profit	Selling Expense	Warehouse and Delivery Expense	Administrative and General Expense	Net Operating Profit ¹	Stock Turnover Rate ²
	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.	No.

Drug.....	86.57	13.43	2.18	2.68	6.09	2.48	5.60

¹ Before addition of miscellaneous income or deductions of miscellaneous expense and income tax.
² Times per year—cost of goods sold divided by the average of beginning and year-end inventories.

Owing to the respective peculiarities of the ten trades for which results are shown, the operating profit and expense items expressed as percentages of net sales vary greatly. The gross profit ratio, or mark-up factor, ranged from 7.6 p.c. in the tobacco and confectionery trade to 25.3 p.c. in the automotive parts and accessories trade. Reference to the stock turnover rates indicates the reason for comparatively low mark-up factors in the food-trade group. The high rates of stock turnover that occurred in the food industry group are both a cause and effect of low gross profit ratios. Conversely, those trades with comparatively high gross profit ratios showed lower stock turnover rates.

Each of the three expense classifications showed wide ranges when expressed as ratios of net sales. Selling expenses ranged from 1.4 p.c. in the grocery trade to 7.3 p.c. in the automotive parts and accessories trade; warehouse and delivery expense from 1.5 p.c. in tobacco and confectionery to 4.4 p.c. in the fruit and vegetable trade; and general and administrative expenses from 2.7 p.c. in the tobacco and confectionery trades to 9.3 p.c. in the automotive parts and accessories trade. Hardware wholesalers netted the highest operating profit ratio of 6.7 p.c. and footwear wholesalers showed the lowest net operating profit ratio of 0.3 p.c.

Subsection 2.—Retail Trade Statistics

From Canadian fields and farms, forests, mines, stockyards, factories and mills, and from foreign lands through Canadian Atlantic and Pacific seaports, goods travel through innumerable channels to converge finally on the retail outlets before being dispersed again, but this time in small parcels made up to individual tastes for the consumer trade. Thus, the retailer occupies an important place between producer and consumer and, in a real sense, is the keystone of the distribution arch, for it is through retail outlets that every necessary operation of production for consumption is brought to its intended conclusion.

Retail Sales.—Retail sales are available for the census years 1930, 1941 and 1951. Estimated sales for 1952, revised to the 1951 Census results, are also shown in Table 19. Sales of \$10,661,000,000 in 1951 were more than three times the 1941 figure of \$3,442,000,000. These figures are not adjusted for price changes.

19.—Retail Trade, by Province and by Kind of Business, 1930, 1941, 1951 and 1952

Province and Kind of Business	1930	1941	1951	1952

¹ Includes Newfoundland in 1951 and 1952.

² Includes the Yukon and Northwest Territories.

Retail Chain Stores.—Chain-store sales amounted to \$1,726,354,000 in 1951 compared with \$639,210,000 in 1941, the immediately preceding complete census of merchandising establishments. The 1951 Census enumeration disclosed some retail chain-store firms not included in previous annual surveys. For this reason a correct comparison with 1950 figures shown here is not possible. When complete 1951 Census results are known, intercensal estimates will be made to adjust the difference between 1951 estimated sales and 1951 actual sales from the Census, over the ten-year interval from the former complete Census of 1941. Until this is done, percentage changes from 1950 will not be shown.

20.—Chain-Store Statistics, 1930 and 1941-51

Year	Average Number of Stores	Net Retail Sales	Salaries and Wages Paid to Store Employees	Stocks on Hand, End of Year		Accounts Out- standing, End of Year

Department Stores.—Actual 1951 sales of department stores together with 1952 estimates based on final 1951 sales will be available when the 1951 Census results are known and will appear in subsequent editions of the Year Book.

Operating Results of Retail Stores.—The operating results series is conducted on a biennial basis—retail chain stores and wholesale trade are covered for 1947, 1949 and 1951, and independent retail stores for the alternate years. Latest available results for independent retail stores are given in the 1952-53 Year Book, p. 891.

Operating Results of Retail Chain Stores.—The 1951 study continues the series which, together with wholesalers' operating results studies for the same year and independent-store studies begun some years earlier (latest taken for 1950), have created a balanced body of information on distribution costs. The main profit and loss items of ten selected trades are shown in Table 22.

22.—Operating Results of Retail Chain Stores, for Selected Kinds of Business, 1951

NOTE.—All figures except stock turnover are percentages of net sales.

¹ Includes salaries and wages, and occupancy. the average of beginning and year-end inventories.² Times per year—cost of goods sold divided by

These results illustrate distinctly different experiences for food chain stores from other classes of chain store. Food chains operated with lower profit and expense ratios than the others shown and also had a higher stock turnover rate, particularly where meat sales form all or part of total sales.

Retail Consumer Credit.—The current series of retail consumer credit estimates is linked closely with that of retail trade estimates. Like retail trade, the 1951 Census results will reveal where the estimates require revision and, as these Census results were not available at time of assembly of this Section, consumer credit estimates cannot be presented here. These data will be given in subsequent editions of the Year Book.

Subsection 3.—Statistics of Service Establishments

Theatres.—Total receipts in 1951 from motion picture showings amounted to \$102,359,739, including \$11,373,629 collected as amusement tax. These receipts include all types of theatres but do not include receipts from showings by community organizations.

The comparable figures for several years, given in Table 23 on a provincial classification, do not include drive-in theatres or itinerant operators. Drive-in theatres increased from 62 in number in 1950 with receipts, excluding taxes, of \$2,290,679 to 82 in 1951 with receipts of \$3,347,670.

23.—Motion Picture Theatres and Receipts, by Province, 1941 and 1948-51

NOTE.—Itinerant operators and drive-in theatres are not included in these figures. Receipts are exclusive of amusement taxes.

Power Laundries, Cleaning and Dyeing Plants.—The 317 power laundries and 981 dry-cleaning plants operating in Canada during 1951 provided services to the value of \$96,851,857. Laundry plants accounted for \$44,053,442 of this amount and dry-cleaning plants \$52,798,415. The 1951 survey of these related industries was taken as part of the Decennial Census and certain information not consistent with census requirements was not asked. For this reason the item "cost of materials" is not available for 1951.

³ Includes the Yukon and Northwest Territories.

Hotels.—The 1951 survey of hotels formed part of the Decennial Census of Distribution. This third consecutive survey of hotels saw further minor refinements in classification, noticeable when comparing the number of hotels in operation in the different years.

There were 5,092 hotels in operation during 1951 with total receipts of \$357,282,000 of which 4,078 operated on a full-year basis. The sale of beer, wine and liquor was the principal source of revenue amounting to \$180,642,000; receipts from room rentals amounted to \$83,322,000 and from meal sales \$63,440,000. Total operating expenditure amounted to \$170,566,000 of which \$80,382,000 was accounted for by salaries and wages.

Subsection 4.—Miscellaneous Merchandising Statistics

Farm Implement Sales.—Manufacturers' and importers' sales of farm implements and equipment at the wholesale price level amounted to \$235,620,345 in 1951, an 8-p.c. increase over the 1950 total. Estimated expenditure by Canadian farmers at the retail level was approximately \$287,000,000. Sales of repair parts amounted to \$28,772,869 at the wholesale level or approximately \$38,000,000 at the retail level.

27.—Farm Implement and Equipment Sales, by Province, 1950 and 1951

NOTE.—Values are mainly at wholesale prices.

Sales of New Motor-Vehicles.—Sales of new motor-vehicles increased from 385,648 units in 1951 to 400,777 in 1952. These were sold for \$1,002,615,841 with increased dollar sales evident for both passenger cars and commercial vehicles. The number of trucks and buses sold, however, decreased slightly from 1951.

Sales Financing.—The financing of retail instalment sales by sales finance and acceptance companies reached a record amount of \$819,000,000 in 1952, 75 p.c. higher than the \$467,000,000 financed in 1951. The financing of motor-vehicles, new and used, accounted for 78 p.c. of total financing in 1952. The most significant percentage gain occurred in household appliances, the increase being from 4.3 p.c. of total financing in 1951 to 8.7 p.c. in 1952.

Balances outstanding at the end of 1952 amounted to \$540,000,000, an increase of 72 p.c. over the previous year. The largest percentage increases occurred in the household goods items.

¹ Included in "Other".

The increased amount of financing of motor-vehicles is accounted for by an increase in the number of vehicles sold and also by a higher percentage of vehicles sold on the instalment plan. In 1952, 43 p.c. of the number sold were financed, a greater share than in previous years. The financed value handled by finance companies represented 29 p.c. of total vehicle sales value.

Section 5.—Co-operative Organizations*

During the crop year ended July 31, 1952, reports were received by the Department of Agriculture from 2,616 co-operative associations of all types. Membership reported totalled 1,373,471 and the total volume of business, including other revenue, reached a record high of \$1,219,253,850. This volume figure represents an increase of \$202,700,000 over that reported in the previous year and is significant because it was reported by 152 associations fewer than in 1950-51. Marketing co-operatives reported a total sales value of farm products handled by them of \$927,589,172. Purchasing co-operative business amounted to \$248,050,761.

Fishermen's co-operatives numbered 83 with 14,641 members and the total sales value of fish and fish products handled amounted to over \$20,000,000. This figure is estimated to be nearly 12 p.c. of the total commercial value of Canadian fish production for 1951. Service co-operatives reporting numbered 339 with a membership of 195,027 and total business of \$8,125,000.

Developments in 1951-52.—Perhaps the two most important developments within the co-operative movement in Canada during 1951-52 were the reorganization of the Saskatchewan Co-operative Producers Limited and the beginning of operations on a national scale by the Co-operative Fire and Casualty Company.

* Prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, by J. E. O'Meara, Marketing Service, Department of Agriculture, Ottawa.

The reorganization of the Saskatchewan Co-operative took effect at the beginning of August 1952. From that date all the physical assets of the subsidiary companies—the Saskatchewan Pool Elevators Limited, Saskatchewan Pool Terminals Limited, Modern Press Limited, and the Saskatchewan Co-operative Livestock Producers Limited—are leased to the parent company, which will become the sole operating unit; the subsidiaries will become holding companies. Coincident with this internal reorganization, application was made to the provincial legislature of Saskatchewan for an amendment to the special Act of incorporation asking that the name of the organization be changed from Saskatchewan Co-operative Producers Limited to Saskatchewan Wheat Pool.

The Co-operative Fire and Casualty Company was incorporated by special Act of the Federal Government on June 30, 1951, and was licensed for operation on May 5, 1952. The Company began writing fire and automobile insurance on July 1, 1952. While at the outset the Company was mainly engaged in business in Saskatchewan and the Maritime Provinces, it is the eventual intention to extend operations to every province where the insurance services of the Company are desired by co-operatives and co-operators.

Saskatchewan Federated Co-operatives, with headquarters at Saskatoon, authorized plans for an extension and additions to the co-operative oil refinery at Regina at a cost of \$5,500,000. Interprovincial Co-operatives Limited, of Winnipeg, Man., leased a cannery at Beamsville, Ont., where they propose to can fruits and vegetables and distribute these products under a "co-op" label to co-operative wholesales throughout Canada.

Marketing.—The sales value of farm products marketed co-operatively in Canada during 1951-52 amounted to \$927,589,172. This is the largest volume ever reported and is \$158,000,000 higher than the total reported in 1951. All farm products, except eggs and poultry, furs, tobacco and maple products, shared in the increase, the largest gains being reported by the grain, live stock and dairy products co-operatives. The major decrease occurred in eggs and poultry, egg prices declining seriously during the year.

Canada's co-operatives in the grain trade are the largest organizations in co-operative marketing in this country. After a poor year in 1950-51 because of a low-quality crop, the volume of business done by the grain-marketing co-operatives in 1951-52 increased by \$95,000,000 to a total of \$432,000,000. The 1951 crop of western grain was of relatively low quality but exports were almost of record proportions and there was an increase in domestic sales. Wheat prices remained level throughout the year. Oat and barley prices were high in 1951 and remained steady during 1952.

Cash farm income from the sale of agricultural products handled by co-operatives increased by about 7 p.c. in 1951-52 compared with 1950-51. The percentage increase in the sales volume of marketing co-operatives for the same period was nearly 20 p.c. Co-operatives handled 35.7 p.c. of all agricultural products marketed commercially in Canada in 1951-52. For the various products concerned similar percentages are as follows, with percentages for the previous year shown in parentheses: dairy products, 25.1 (25.8); live stock, 32.4 (21.4); poultry and eggs, 8.3 (12.2); wool, 83.8 (87.5); grain, 54.7 (56.9); fruits and vegetables, 23.4 (27.1); maple products, 23.6 (41.2); tobacco, 65.7 (95.6); and honey, 28.9 (27.5).

Merchandising.—Sales of farm supplies, household and consumer goods by co-operatives in 1951-52 amounted to \$248,050,761, an increase of over \$38,000,000 above the figure reported for the previous year. Increases were reported in the sales of all commodities handled, the largest increases being reported by co-operatives handling feed and fertilizers and machinery.

Wholesaling.—Eleven co-operative wholesales in Canada did a total volume of business of \$167,500,000 in 1951-52, an increase of \$26,000,000 over the figure reported for the previous year. There is a co-operative wholesale in every province except Newfoundland. One province has two wholesales and there is one other that operates as an interprovincial wholesale.

Total sales of farm products through the wholesales in 1951-52 amounted to \$95,500,000. Total sales of merchandise amounted to \$72,000,000. Main items handled by the wholesales were feeds and fertilizers, petroleum products, clothing and hardware.

Retailing.—Sales of food products or groceries in 780 retail outlets in 1951-52 amounted to \$51,500,000; clothing and home furnishings to the value of \$7,750,000 were handled by 493 outlets; feed and fertilizer sales amounted to \$21,200,000 and petroleum products sold through 354 retail stations were valued at \$12,800,000.

¹ Includes other revenue.

Section 6.—Interprovincial Freight Movements*

Statistics on interprovincial trade are difficult to collect since there are no controls or barriers to this trade. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. Railway traffic is segregated into 76 classes of freight and the differences between loadings and unloadings are the imports and exports *by rail* for the respective provinces. Freight can, however, be imported by rail and exported by water, as is the case with western grain moved to the Ontario ports of Fort William and Port Arthur. Consequently, the statistics of Table 37 must not be taken as a measure of total interprovincial trade: these figures indicate interprovincial movement of railway freight which is one aspect only of that trade.

* Revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

¹ Figures for freight originating and freight terminating do not agree because freight that originates within a certain year does not all terminate within the same year; some that terminated in 1952, for instance, originated within the previous year.

PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

During the post-war period, the elaborate system of government control of trade that the war effort made necessary was gradually relaxed (*see the 1948-49 Year Book*, pp. 837-841) until, by the beginning of 1949, only those measures to protect domestic requirements and prevent the forcing upward of prices in the Canadian market remained; since then even these have practically disappeared.

Section 1.—Controls Affecting the Handling and Marketing of Grain

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners, which since 1912 has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. The former is a quasi-judicial and administrative body which, through the powers vested in it in matters of interprovincial transportation and patents and copyrights, gives the Federal Government complete power to control the handling of grain; it has no power or duties in respect of grain prices. The Canadian Wheat Board, which began to function in the autumn of 1935, was a natural outgrowth of government stabilization measures that were taken during the depression years of the 1930's in regard to the marketing of grain crops. During this period, the Government acquired a considerable quantity of wheat and, in the 1935 session of Parliament, legislation was passed to serve the dual purpose of disposing of the holdings so acquired and, at the same time, arranging for the marketing of new crops.

An account of the organization and functions of the Board of Grain Commissioners appears in the 1941 Year Book, pp. 481-482. An article on the operations of the Canadian Wheat Board is commenced in the 1939 Year Book, pp. 569-580, and concluded in the 1947 edition.

Section 2.—Combinations in Restraint of Trade*

Federal legislative measures for aiding and regulating trade include specific prohibitions of operation against the public interest by monopolies and similar commercial combinations. Monopolistic trade arrangements tending to eliminate competition in price, supply or quality of goods, and thereby to restrain trade unduly, are illegal under the Combines Investigation Act and Sect. 498 of the Criminal Code. These laws are designed to promote reasonable competitive opportunities for the expansion of production, distribution and employment.

The first federal legislation in this field was enacted in 1889 and is still effective in amended form as Sect. 498 of the Criminal Code. Legislation providing for investigation of trusts or combines was first enacted in 1897 as part of the Customs Tariff Act. In 1910 a separate Combines Investigation Act was passed and further legislation was enacted in 1919 and 1923.

The Combines Investigation Act.—The Combines Investigation Act (R.S.C. 1952, c. 314), enacted in 1923, provides for the investigation of trade combinations, monopolies, trusts or mergers alleged to have operated to the detriment of the

* Revised by T. D. MacDonald, Q.C., Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

public through limiting production, fixing or enhancing prices, limiting competition or otherwise restraining trade. Organizations of this nature are defined by the Act as 'combines' and participation in the formation or operation of a combine is an indictable offence. In line with recommendations contained in a final report by the Committee to Study Combines Legislation, certain amendments effective Nov. 1, 1952, revised the administrative organization by delegating the functions formerly exercised by the Commissioner of the Combines Investigation Act to an agency for investigation and research and a board of three members to appraise the evidence obtained in investigations and report thereon. The former Commissioner of the Combines Investigation Act became the new Director of Investigation and Research, with authority to initiate investigations respecting practices alleged to be offences under the Combines Investigation Act or under Sect. 498 or 498A of the Criminal Code which concern offences related to those covered by the Combines Investigation Act. The board is known as the Restrictive Trade Practices Commission and the following persons have been appointed as members: C. Rhodes Smith, Q.C., Chairman, formerly Attorney-General of Manitoba; Guy Favreau, a member of the Quebec Bar; and A. S. Whiteley, an economist who served as Deputy Commissioner under the Combines Investigation Act. Other amendments removed limitations on possible fines and permitted the courts to prohibit continuation or repetition of an offence. Amendments made to the Combines Investigation Act in 1951 adopted recommendations contained in the interim report of the Committee to Study Combines Legislation which prohibit the practice of resale price maintenance.

The report to the Minister of Justice of an investigation into the manufacture, distribution and sale of matches in Canada, submitted in December 1949, alleged that a combine by way of merger, trust or monopoly existed in the wooden match industry in Canada. Four formal charges were preferred under the Combines Investigation Act. The trial of the first charge concluded at Montreal in May 1951 with the five corporation defendants being convicted and fined a total of \$85,000 and costs. The accused appealed the conviction and sentence to the Quebec Court of Queen's Bench (Appeal Side), the appeal to be heard in January 1953, and decision is now (December 1953) pending. The other three charges are in abeyance pending the appeal.

In a report of a special commissioner made in November 1948, a combine was alleged to exist in the bread-baking industry in the Provinces of Saskatchewan, Alberta and British Columbia. Prosecution was instituted and on Oct. 2, 1951, six bakery corporations charged were found guilty, as charged under Sect. 498 of the Criminal Code, with total penalties of \$30,000 and costs being imposed. The case was concluded in January 1953 when the costs and expenses which the convicted parties had been ordered to pay in addition to the fines were determined by the court in the amount of \$19,402, and the appeals which the parties had asserted against their conviction and sentence were dismissed for want of prosecution.

A report was submitted to the Minister of Justice on May 21, 1952, alleging the existence of combines in six divisions of the rubber industry. Prosecution was instituted and on Apr. 8, 1953, five companies pleaded guilty, at which time an application was made on behalf of the Crown for an order prohibiting the continuation or repetition of the offence or the doing of specified acts or things directed towards the continuation or repetition of the offence. Judgment in regard to

sentence and the application for the prohibition order was reserved. Charges in respect of certain other divisions of the rubber industry dealt with in the report are expected to be proceeded with in the autumn of 1953.

A report, comprising the results of an investigation into the fine paper industry, was submitted to the Minister of Justice on Oct. 23, 1952. The report named seven manufacturers and 37 fine paper merchants as having been parties or privy to or knowingly assisted in the operation of a combine or combines within the meaning of the Combines Investigation Act. Decision to prosecute some or all of the manufacturers and some or all of the merchants mentioned in the report was announced by the Minister on Apr. 7, 1953.

On Jan. 22, 1953, a report was submitted to the Minister alleging that, at the time of commencement of the inquiry in 1949, a combine existed in connection with the distribution and sale of coarse papers in and around Vancouver. The report named six wholesale coarse-paper distributors as being the principal parties to the alleged combine together with three other wholesale firms and three manufacturers which from time to time had knowingly assisted in the operation of the alleged combine. On Feb. 4, 1953, the report was made public by the Minister, who stated that as soon as he had examined it carefully and received the opinion of counsel he would make a further announcement as to whether proceedings would be instituted with respect to the operations of the alleged combine.

A report of an investigation into an alleged combine in the purchase of maple syrup and maple sugar in the Province of Quebec was submitted to the Minister of Justice on Mar. 20, 1953, and made public by him on Apr. 1, 1953. The report stated that, out of ten firms engaged in the purchase of maple products in Quebec, six made an arrangement to buy their supplies of these products through a common agency at a common price. The Commission, however, was of the opinion that the evidence did not go so far as to prove the existence of a combine, since the parties who entered into the arrangement had not been shown to account for a sufficiently large portion of the market or to have such control over it as to make it appear conclusively that their arrangements were detrimental to the public, that is, in this case, the producers. This was the last report made by the Commissioner of the Combines Investigation Act and subsequent reports will be made by the Restrictive Trade Practices Commission.

During 1952 and 1953 a variety of matters were disposed of on preliminary inquiry while in a number of other cases investigations were proceeding. Numerous consultations and interviews were held with individuals and representatives of business groups interested in discussing the possible application of the Act to conditions encountered or to arrangements being considered. During 1953, the Combines Branch represented Canada at meetings of the Ad Hoc Committee on Restrictive Business Practices, established under resolution of the United Nations Economic and Social Council to formulate proposals for an international convention to be considered by the Economic and Social Council.

Section 3.—Trade Standards*

The Standards Division of the Department of Trade and Commerce consolidates, under one Director, the administration of the Electricity Inspection Act, the Gas Inspection Act, the Electricity and Fluid Exportation Act, the Precious Metals Marking Act and the Weights and Measures Act.

Commodity Standards.—On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising.

In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. In addition, where manufacturers label descriptively any commodity or container, it must be labelled accurately to avoid public deception. One such regulation of interest applies to the labelling of fur garments and has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (R.S.C. 1952, c. 215), commodities composed of gold, silver or platinum may be marked with a quality mark which describes accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada, or for which application for registration has been made, must also be applied. Gold-plated, silver-plated or platinum-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Division is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale and in checking the marks applied.

Weights and Measures.—The Weights and Measures Act prescribes the legal standards of weight and measure for use in Canada. Responsibilities under the Act require control of the type of all weighing and measuring devices used for commercial purposes, their periodic verification and surveillance directed towards the elimination of sales by short weight or short measure.

The number of inspections made in the year ended Mar. 31, 1953, was 437,644, compared with 435,333 in 1951-52. The more important inspections comprised the following: weighing machines, including scales of all kinds, 225,452; measuring machines for liquids, 67,174; weights, 122,966; other measures, 22,052. Total expenditure was \$659,975 in 1952-53 compared with \$621,449 in 1951-52, and total revenue \$600,641 compared with \$508,963.

Electricity and Gas Inspection.—Responsibilities of the Standards Division under the Electricity Inspection Act and the Gas Inspection Act comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 21 districts for administration of the two Acts, and staff numbers 158. During the year ended Mar. 31, 1953, 928,827 electricity and gas meters were tested as compared with 910,069 in the preceding year. Revenue derived from the testing amounted to \$631,389 and expenditure to \$574,597.

* Prepared by R. W. MacLean, Director, Standards Division, Department of Trade and Commerce, Ottawa.

¹ Includes Newfoundland.

The Electricity and Fluid Exportation Act came into force in 1907. Under its provisions no electric energy or fluid, whether liquid or gaseous, may be exported from Canada without a licence. Total exports of electric energy during the year ended Mar. 31, 1953, amounted to 2,463,059,301 kwh. There was also a small export of natural gas and crude oil.

Section 4.—Patents, Copyrights and Trade Marks*

Letters patent are issued subject to the provisions of the Patent Act, 1935 (R.S.C. 1952, c. 203). Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

2.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1948-53

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 12,542 in 1923 and has remained between 6,500 and 10,000 for the past ten years. Of the 9,700 patents granted in 1952-53, 6,966 or 72 p.c. were to inventors resident in the United States, 742 to Canadian residents and 1,095 to residents of the United Kingdom or other Commonwealth countries. Residents of France obtained 226, of Switzerland 144, of Holland 219, and of other countries 308.

Printed copies of patents issued from Jan. 1, 1949, to date are available at a nominal fee. The Canadian *Patent Office Record* gives a brief digest of each patent.

* The material relating to patents and copyrights was revised by J. W. T. Michel, Commissioner of Patents, and that relating to trade marks by J. P. McCaffrey, Registrar of Trade Marks, Department of the Secretary of State, Ottawa.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1872 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Hungary and Mexico.

Copyrights, Industrial Designs and Timber Marks.—Registration of copyright is governed by the Copyright Act, 1921 (R.S.C. 1952, c. 55). Applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada... in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol... or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death".

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States of America.

Protection of industrial designs and of timber marks is afforded under the Trade Mark and Design Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office and information regarding them is published in the Canadian *Patent Office Record*.

3.—Copyrights, Industrial Designs and Timber Marks Registered, Years Ended Mar. 31, 1948-53

Item	1948	1949	1950	1951	1952	1953

Trade Marks and Shop Cards.—The Trade Marks Office, a Branch of the Department of the Secretary of State, is charged with the administration of the Unfair Competition Act, 1932, which repealed all previous Acts governing trade marks, and the Shop Cards Registration Act, which came into force on Sept. 1, 1938. Applications for registration of trade marks and shop cards should be addressed to the Registrar, Trade Marks Office, Ottawa.

A register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted and notification of any assignments, transmissions, disclaimers and judgments relating to such trade mark. In order that the public may be kept informed in the matter of trade-mark registration, a list of registered trade marks appears in the Canadian *Patent Office Record* which is issued weekly.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that were able formerly to register their particular designations as Union Labels under the Trade Mark and Design Act. Registrations under the Act may be renewed every 15 years.

Section 5.—Subventions and Bounties on Coal*

Subventions have been regulated during past years by Orders in Council authorizing the payment of certain rates of assistance, in respect of the various movements of coal specified therein, from moneys voted annually by Parliament for that purpose. It has not been considered practicable to fix subvention aid by statute owing to the frequent changes in the competitive situation.

5.—Expenditure for Subventions, by Province, 1947-52

The Coke Bounty Act, 1930 (20-21 Geo. V, c. 6), implemented one of the recommendations of the Royal Commission on Maritime Claims and was approved by Parliament on May 30, 1930. The bounty is paid on Canadian coal converted to coke and used in the manufacture of Canadian iron and steel and places the coal on a basis of equality with imported coal.

* Prepared by H. H. Harris, Administrative Officer, Dominion Coal Board, Ottawa. Additional information on subventions and bounties summarized from the *Report of the Royal Commission on Coal, 1946*, is given in the 1947 Year Book, pp. 770-771.

Bounties paid under this authority for the years 1947-52 were as follows:—

	1947	1948	1949	1950	1951	1952
Quantity.....ton	555,386	712,150	740,288	830,752	810,608	698,449

Section 6.—Control and Sale of Alcoholic Beverages

The provincial liquor control Acts have been constituted to establish provincial monopolies of the retail sale of alcoholic beverages, with the practical elimination therefrom of private profit. Partial exception is made in the retail sale of beer by brewers, or others which certain provinces permit, while reserving regulative rights and taxing such sales heavily. The provincial monopoly extends to the retail sale and not to the manufacture of alcoholic beverages. The original liquor control Acts have been modified from time to time as deemed advisable.

The distilled liquor industry produces not only beverage spirits but also industrial alcohol such as (1) unmatured, denatured by distillers, used in anti-freeze and numerous other items, and (2) unmatured, non-denatured, used in chemical compounds, pharmaceutical preparations and vinegar. Production of industrial alcohol (denatured and non-denatured) totalled 7,252,410¹ pf. gal. in 1951, an increase of 778,354 pf. gal. over 1950. Beverage spirits produced in 1951 and placed in bond for maturing totalled 17,613,470 pf. gal. as compared with 15,147,458 pf. gal. the previous year. Sales in 1951 of denatured alcohol for anti-freeze, solvents, cleaning fluids, perfume manufacturing, etc., amounted to 3,208,546 standard gal. as compared with sales of 3,835,517 standard gal. in 1950. Sales of 4,331,500 pf. gal. of non-denatured alcohol in 1951 were 782,542 pf. gal. higher than in 1950. Beverage spirits sold (domestic and export sales) amounted to 18,270,522 pf. gal. in 1951 and 18,209,143 pf. gal. in 1950.

Materials used show important changes. Wheat was the major item during World War II but in 1951, owing to restrictions resulting from world food problems, consumption declined to only 25,434,992 lb. from a peak of 402,535,232 lb. in 1944. Corn replaced wheat, increasing from 15,833,741 lb. in 1944 and 45,191,740 lb. in 1945 to 207,576,420 lb. in 1951. Wheat flour (alcomeal), introduced during the War and consumed to the extent of 77,268,410 lb. in 1944, ceased to be of importance in the later years.

Net Revenue from Liquor Control.—The provincial figures of net revenue shown in Table 6 include not only the net profit made by Liquor Control Boards or Commissions but also additional amounts of revenue received from permits, licences, etc., sometimes paid direct to the provincial governments.

The Federal Government, for the year ended Mar. 31, 1952, also collected in excise duties, customs duties, excise taxes, licence fees, etc., \$82,096,567 on spirits, \$77,670,484 on malt and malt products and \$2,939,000 on wines.* Corresponding collections for the year ended Mar. 31, 1951, were \$92,217,597 on spirits, \$68,234,475 on malt and malt products and \$2,921,321 on wines.

* Excludes sales tax, details of which are not available for separate commodities.

6.—Total Provincial Revenue from Liquor Operations, Provincial Fiscal Years 1943-52

NOTE.—Provincial fiscal years ended on the following dates, Nfld. and P.E.I., Mar. 31; N.S., Nov. 30, 1943-50, Mar. 31, 1951-52; N.B., Oct. 31, 1943-50, Mar. 31, 1951-52; Que. and Ont., Mar. 31; Man., Apr. 30, 1943-46, Mar. 31, 1947-52; Sask., Alta. and B.C., Mar. 31.

³ Five months ended

Mar. 31.

⁴ Eleven months ended Mar. 31.

⁵ The figures for 1950, 1951 and 1952 are not entirely comparable with those for previous years owing to a change in the basis of compilation. In the earlier years, licences and permit fees as well as certain provincial taxes which may have been administered by the liquor authority were included in net profits, such being included in the amounts reported by the respective Boards. In those provinces, however, where these types of revenue were collected through the Provincial Treasurer's office they did not appear as part of net profits although they were included in the total revenue figures. Also the total revenue figures for 1950-52 include fines and penalties for infractions of liquor control operations.

Apparent Consumption of Alcoholic Beverages.—An accurate measurement of the consumption of alcoholic beverages by Canadians is not possible since no separate record is kept of sales to non-residents of Canada. Temporary additions to the resident population through tourist travel are, at certain seasons, extremely large. In 1952, for example, about 26,000,000 visitors crossed the International Boundary into Canada and sales of alcoholic beverages to certain of these visitors undoubtedly reached considerable proportions.

In Tables 7, 8 and 9 an attempt is made to indicate the apparent consumption in Canada of spirits, beer and wine, respectively, on the basis of the quantities produced, imported, exported, etc. It should be noted, however, that these figures take no account of increases or decreases in the quantities held in stock by the liquor control boards or by licensees. For instance, the boards may, in certain years, buy heavily to replenish stocks or create reserves; such purchases would unduly weight the consumption figures for those years.

Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown in Table 7 as entered for consumption are released from warehouses, duty paid, presumably for consumption for beverage purposes in Canada. Only a small part of the output of beer is placed in warehouses. The available supply as shown in Table 8 is, therefore, made up of production, changes in warehouse stock and imports. The apparent consumption of native wines as shown in Table 9 is obtained by dividing the total tax collections by the rates of excise tax.

7.—Apparent Consumption of Beverage Spirits, Years Ended Mar. 31, 1943-52

NOTE.—Figures for the years 1924-40 are given in the 1941 Year Book, p. 532, and for 1941-42 in the 1950 edition, p. 891. After 1942, a change was made in the method of computing apparent consumption of beverage spirits.

PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

The three Sections of this Part, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures and the statistics presented in each Section are not comparable with those given in the other Sections.

Section 1 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can, therefore, be assumed that this applies in even greater degree to the more extended fields covered in Sections 2 and 3.

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) but not failures, sales or seizures carried out apart from such federal legislation. The Dominion Bureau of Statistics figures include failures of individuals such as wage-earners. For recent years, separate data are shown for insolvencies by wage-earners as distinct from industrial and commercial mortalities. The figures of assets and liabilities are estimates made by the debtor and, unfortunately, are not made uniformly. The human element enters into them to a considerable degree and they should, therefore, be accepted with reservations.

The statistics given in Section 3 are compiled by Dun and Bradstreet, Incorporated. This mercantile agency is interested primarily in credit information and their statistics include bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlord's seizures, etc., when loss to creditors results. On the other hand, the statistics do not include assignments of individuals, so that, as a rule, the totals run lower than those in Section 2. Since between the years 1875 and 1919 this agency was the only source of figures of commercial failures, their statistics have an added value because they present a historical series back to 1915 though the basis of classification was changed after 1933 (*see text preceding Table 8, p. 959*).

Section 1.—Administration of Bankrupt Estates*

Federal insolvency legislation now comprises the Bankruptcy Act, 1949, the Farmers' Creditors Arrangement Act, 1943, the Companies' Creditors Arrangement Act and, to some extent, the Winding-Up Act. The two Arrangement Acts are designed to avert failure and the statistics in this Section and in Section 2, therefore, do not include proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act and, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

The Bankruptcy Act, 1949, under which the Bankruptcy Act, 1919, and amendments thereto is repealed, restores to all insolvent persons the right to make a proposal prior to bankruptcy. The summary administration provisions of the Act enable insolvent persons, other than corporations, having limited assets to obtain the benefit of the Act. A new principle has also been established in regard to the discharge of bankrupts and the Act provides that "the making of a receiving order against, or an assignment by, any person except a corporation operates as an application for discharge" unless a waiver is filed in court and served upon the trustee within the prescribed delays.

The administration of bankrupt estates is supervised by the Superintendent of Bankruptcy, first appointed in 1932, with the object of conserving as far as possible the assets of bankrupt estates for the benefit of the creditors.

The series of statistics collected on estates closed under the Bankruptcy Act, 1919, covering the years 1933-50 are given in the 1947 Year Book, p. 846, and the 1952-53 edition, p. 915. The figures given in Table 1 are those of estates closed under the new Bankruptcy Act, 1949, and begin with the year 1951.

* Prepared by the Superintendent of Bankruptcy, Ottawa. Early bankruptcy and insolvency legislation is reviewed in the 1952-53 Year Book, pp. 914-915.

Summary statistics of estates closed under the Farmers' Creditors Arrangement Act are available in previous editions of the Year Book beginning with the 1947 edition. From the time the Act first came into effect on Sept. 1, 1934, to the end of 1949 there were 885 assignments and 39 receiving orders, or a total of 924 estates closed. No assignments or receiving orders were reported under the Act in 1950, 1951 or 1952 but one case was completed during 1952.

Section 2.—Returns under the Bankruptcy and Winding-Up Acts as Compiled by the Dominion Bureau of Statistics

As stated on p. 954, the figures in this Section cover only the bankruptcies and insolvencies under federal legislation—the Bankruptcy Act and the Winding-Up Act—and include assignments of individuals such as wage-earners.

Under the Bankruptcy and Winding-Up Acts (R.S.C. 1952, cc. 14 and 296), certain documents relating to estates administered under these Acts have, since July 1920, been forwarded to the Dominion Statistician for statistical analysis. A statistical series began with 1923, except for the analysis by branches of business which began in 1924. However, changes in the administration of bankruptcies introduced by the Bankruptcy Act of 1949 (*see* p. 955) affected the comparability of the series. In that Act, provision was made for proposals from insolvent persons and, since July 1950, agreements made under this method are not included with the statistics of bankruptcies. In Table 2 the number of proposals are shown so as to give a general impression of the trend.

Section 3.—Statistics of Industrial and Commercial Failures from Private Source

A table on commercial failures for Canada, by class, for the years 1915 to 1935 (and for Newfoundland for the years 1915-32), is given in the 1936 Year Book, p. 969. In 1936, Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises, previously included in manufacturing, and a new class for commercial service. Real estate companies, holding and other financial companies, and agents of various kinds were omitted. These changes had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities were reduced more in proportion to the number of failures, since the companies eliminated usually ran high in indebtedness. This series extends back to 1934.

7.—Industrial and Commercial Failures, by Class, 1947-51, and by Province, 1952

(Source: Dun and Bradstreet, Incorporated)

¹ Newfoundland included from Apr. 1, 1949.

In 1952, Quebec accounted for 64 p.c. of the total failures and 61 p.c. of the liabilities; Ontario had 19 p.c. of the failures and 21 p.c. of the liabilities.

According to Dun and Bradstreet, Incorporated, commercial failures during World War II decreased steadily year by year and failures in the retail trade group, in which the majority of failures took place before the War, also decreased. After the end of the War, however, the total number of failures increased again each year and failures in the retail trade group in 1952 accounted for almost one-half of the total.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The subject of foreign trade covers more than the treatment of imports and exports of commodities, important though this is. In its broader sense, foreign trade is made up of the total international exchanges of goods, services, securities and other financial exchanges, all of which are presented in their proper relationship in this Chapter. Following Part I, which is a review of Canada's trade during 1951 and 1952, Part II gives detailed statistics of external commodity trade. Part III summarizes external transactions from the standpoint of the balance of international payments. Part IV outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure.

PART I.—REVIEW OF FOREIGN TRADE*

The value of world trade in 1951 reached a record post-war total in terms of United States dollars, the quantity of goods traded and the prices at which transactions were conducted being higher than in any other post-war year. In 1952, there was a slight decline in the value of world trade, accounted for by both lower prices and smaller quantities of goods exchanged. However, trade remained greater than in any post-war year except 1951.

Canada's exports and imports both increased appreciably in volume in 1952 in marked contrast to the decline in total world trade. The gain in export volume was about 11 p.c. and that in import volume almost 13 p.c. Average import prices fell sharply, while those of exports showed little change. As a result, the value of exports increased to a record \$4,356,000,000, while imports declined slightly to \$4,030,000,000.

* Prepared in the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

The increase in the value of Canada's trade in 1952 restored this country to third place among the leading trading nations of the world. Canada has ranked third in world trade in every post-war year except 1951, when the trade of France surpassed that of Canada. In pre-war years, Canada usually held fifth or sixth rank among the trading nations but during and after the War this country's productive capacity expanded greatly. Of the other countries shown in Table 1, only the Federal Republic of Germany managed to increase the United States dollar value of its trade in 1952.

¹ Excluding China, the U.S.S.R., and the communist countries of Eastern Europe.

Canada's per capita trade is considerably higher normally than that of the other leading trading countries. However, the per capita trade of New Zealand continues to be greater than that of Canada.

The record value and volume of world trade in 1951 was influenced especially by the stimulus to defence production in many countries provided by the Korean war and by small grain crops in several European and Asian countries. In 1952, especially in the first half of the year, inventory readjustments affected trade and there was also a marked lull in demand for textiles and some other consumer goods. Grains and newsprint remained in short supply, however, and these commodities together with base metals played an especially important role in the continued increase of Canada's exports. Sustained defence spending and investment were among the principal factors influencing Canada's increased import requirements in 1952.

Direction of Trade.—Changes in the direction of Canada's trade in 1951 and 1952 reflected these forces. Exports of grains increased more sharply than those of other major commodities and the chief markets for grains are the United Kingdom and Western Europe. That area also increased its purchases of Canadian metals during the period. Exports to Latin America were influenced by poor grain crops in Argentina, by heavy investment programs in some countries, and by large sales of motor-vehicles, especially in the period when the Canadian market

was restricted by credit controls. Greater sales to Japan, again especially of grains, were largely responsible for the increase in exports to "other" countries. Sales to the United States, on the other hand, were relatively stable in the period 1950-52, while those to Commonwealth countries were restricted by exchange shortages.

The major share of Canada's import requirements for defence and investment goods is provided by the United States, and that country's share of Canada's imports rose steadily in 1951 and 1952. The shares of most overseas countries, except those of Latin America, declined, especially in 1952 when the slump in Canadian demand for textiles and the collapse of the prices of many Commonwealth goods was a restricting influence. In 1950, the year of most even balance in Canada's trade in the post-war period, the sum of export and import balances with all countries equalled only 11 p.c. of Canada's total trade. By 1952, as a result of these differing changes in the direction of exports and imports, the sum of individual export and import balances reached 24 p.c. of total trade.

2.—Percentage Distribution of Trade, by Leading Countries and Trading Areas, 1950-52

Item and Year	United States	United Kingdom	Europe	Commonwealth and Ireland	Latin America	Others

While trade controls have hampered Canadian exporters in varying measure ever since the War, the influence of one particular control was especially evident in 1952. When foot-and-mouth disease was discovered in Western Canada early in the year the United States and several other countries imposed bans on the importation of live stock, fresh meat and fodders from all or parts of Canada. Part of the trade lost thereby was compensated for by an intergovernmental arrangement with the United Kingdom and New Zealand, whereby Canadian beef replaced New Zealand beef in the British market and some New Zealand beef was sold in the United States. The disease was brought under control by mid-year and, by March 1953, normal trade in these commodities was again possible. However, the value of exports of cattle and beef totalled only \$34,600,000 in 1952 as compared with \$114,000,000 in the preceding year. This factor had a noticeable effect on the share of Canada's exports taken by the United States in 1952.

Changing Trade Trends.—During 1952, there was a marked change in the trend of Canada's trade and the new situation continued into 1953. In the latter half of 1951, the volume of Canada's imports had declined. Falling prices were responsible for some of this decline, as purchases were postponed in expectation

of still lower prices to come. Other important influences included the desire to reduce high-priced inventories and the restriction of the Canadian market for some goods by credit controls. As these influences declined in importance, the volume of imports turned upward in the first half of 1952 but was not significantly greater than in the corresponding period of 1951. The rise in import volume continued throughout the second half of 1952 and into 1953, with only a slight pause in the first quarter of 1953. Heavy domestic investment, high consumer incomes and large defence purchases were the basic influences in this renewed increase of imports, as in that of 1950-51.

While imports continued to rise, export volume fell off in the second half of 1952. This reflected, in part, the slackening of world demand for some products, particularly forest products, and, in part, the intensification of exchange controls in some countries in the latter half of 1952, notably in certain Commonwealth members and Brazil. Another influence was the lack of further exportable surpluses of many Canadian products still in good demand abroad. A period of heavy domestic investment, such as 1950-53, creates a strong immediate demand for goods for use in the investment program, but only as investment projects are completed do increased supplies of goods for export become available. The import balances on commodity trade in most of the period since 1950 reflected this situation, as did the slower rise in export volume than in import volume in this period. The large export balances of late 1951 and much of 1952 resulted rather from an unusual relation between export and import prices than from any reversal of these basic conditions.

Trade Prices in the Post-War Period.—Except for a short period in 1949, the trend of Canada's export and import prices was steadily upwards from the close of World War II until the latter half of 1951. At this point the trend was halted and, especially in the case of imports, reversed. The accompanying chart depicts the movement of export and import prices since the War together with the price of the United States dollar in Canada. An important influence on the high and rising level of trade prices in the post-war period has been the strong demand for foods and materials resulting from the high level of employment and production in many countries. Most changes in these prices have been influenced by several other factors as well.

Canada's export and import price indexes show movements in terms of Canadian dollars. The prices of most goods exported and imported by Canada are not set in the Canadian market but rather in world markets in which the bulk of transactions are conducted by non-Canadians. Although Canada ranks third in world trade, its share of the total is only about 5 p.c. and its share in the consumption of many important commodities entering international trade is even smaller. The value of the Canadian dollar in relation to other important currencies is, therefore, important in determining the level of export and import prices expressed in Canadian dollars.

For this purpose the most important currency is the United States dollar, since that currency is fully convertible and generally acceptable, and since the United States conducts by far the largest single share of world trade. The contract prices of many Canadian exports, including wheat and newsprint, are actually expressed in United States dollars, and that country has provided more than 70 p.c. of Canada's post-war imports. The line on the chart giving the value of the United States dollar in Canada can be taken as roughly representing the relation between the currency in which Canada's price indexes are expressed and those in terms of which world prices are set.

The immediate post-war period was a time of strong emergency demands and of shortages of many important commodities. Production in Europe and Asia had been disrupted during the War. Supplies of many commodities were reduced as a result but, at the same time, the urgent need to restore wartime damage inflated the demand for most goods. These factors caused a sharp upward pressure on prices which was accentuated by the existence of unsatisfied demand in North and South America. This had been built up during the wartime period of high incomes and commodity scarcities. The abolition of wartime price controls in the United States in 1946 and their more gradual abandonment in Canada accentuated the upward pressure on prices. From January 1946 to January 1949, Canada's export prices increased by 38 p.c. and import prices by 39 p.c. These increases would have been even sharper except for the appreciation of the Canadian dollar in July 1946, which had the effect of offsetting the increase in export and import prices by about 10 p.c. in the last half of that year.

The rate of increase in export and import prices slackened towards the end of 1948 and in the early part of 1949 they showed some decline. The chief cause of this recession was a lowered level of business activity in the United States in this period. The diminishing strength of reconstruction needs was also influential. These factors reduced the demand for goods and permitted prices to decline for a time. The drop in United States imports which accompanied that country's business readjustments also aggravated the severe dollar shortage that was handicapping world trade. In September 1949, there was a general readjustment of

exchange rates in which the Canadian dollar was depreciated by about 9 p.c. relative to the United States dollar, and sterling was reduced in value by 30 p.c. relative to the same standard.

These changes in exchange rates caused a sharp increase in export and import prices in the following months. Since the value of the Canadian dollar was lower, world prices in Canadian dollar terms were higher. The increase in import prices resulting from the exchange rate readjustments was greater than that in export prices. This was caused mainly by the greater share in imports than in exports of commodities, prices of which were determined in currencies with respect to which the Canadian dollar had been depreciated. In the first half of 1950, the business recovery in the United States led to some further increase in trade prices but this was not pronounced.

The outbreak of the Korean war was followed by renewed increases in export and import prices, especially of such important strategic raw materials as wool, rubber and tin. In 1950, the effect of increases in world prices was mitigated by the appreciation of the Canadian dollar following the abandonment of the fixed exchange rate policy in October, but the continuation of the price rise soon absorbed the effects of this change. Import prices rose very steeply in the last part of 1950 and the early months of 1951; export prices followed the upward trend at a slower rate. A pronounced deterioration in the terms of trade resulted and contributed heavily to the import balance on commodity trade in the first six months of 1951.

3.—Price of the United States Dollar in Canada, by Month, 1946-52

NOTE.—Rates published by Bank of Canada. To Oct. 1, 1950, average, for business days in period, of mid-rate between official buying and selling rates; from Oct. 2, 1950, noon average market rate for business days in period.

The terms-of-trade ratio is calculated by expressing an export price index as a percentage of an import price index. It expresses the import purchasing power of a unit of Canadian exports. When import prices rise more rapidly than export prices, then the quantity of imports obtained in return for any given quantity of Canadian exports falls, and either exports must be increased to pay for imports or other means of payment must be found (unless the volume of imports is artificially restricted). This was the situation late in 1950 and in the first half of 1951.

Canada's import price index reached its peak in June 1951 and declined steadily thereafter until, in August 1952, import prices were 18 p.c. below their peak. Export prices rose more slowly and less extremely. They did not reach their peak until November 1951 and proved to be less vulnerable to readjustment. In December 1952 they were only 6 p.c. below their peak. Contrasting movements in export and import prices from June to November 1951, and the more rapid decline of import prices than export prices thereafter, resulted in a steady improvement in the terms of trade throughout most of 1952. This made the chief contribution to the large export balance on commodity trade achieved in that year.

Besides tending to inflate the value of external trade from 1946 to 1951 and to reduce it thereafter, these movements in export and import prices had an important influence on the domestic price level. They helped to cause the steady increase in domestic prices after the War and were also important in facilitating the decline of prices in Canada in 1952. So large a proportion of the goods consumed in Canada is obtained from abroad, or is saleable abroad, or is produced by resources that have alternative uses in export industries, that movements in world prices have a strong tendency to produce similar movements in domestic prices in this country.

PART II.—FOREIGN TRADE STATISTICS*

Section 1.—Explanations *re* Canadian Trade Statistics

Certain problems of procedure arise in recording trade statistics and require explanation. For the correct interpretation of the statistics of foreign trade, it is necessary that the following definitions and explanations of terms used be kept in mind:—

Quantities and Values.—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.—"Imports" means imports entered for consumption. "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which said merchandise was exported. (*See* Sects. 35 to 45 and 55 of the Customs Act.)

Canadian Exports: Valuation.—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Foreign Exports: Valuation.—"Foreign produce" exported consists of foreign merchandise that has previously been imported (entered for home consumption). The value of such commodities is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Countries to which Trade is Credited.—Imports are classified as received from the countries whence they were consigned to Canada. These countries are not necessarily the countries of actual origin of the goods, since goods produced in one country may be imported by a firm in another country and later re-sold to Canada. In such cases the second country would be the country of consignment to which the goods would be credited.

* Based on statistics taken from reports published by the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

There is one exception to this rule. An attempt is made to classify by country of actual origin all imports produced in Central and South America. The effect of this procedure, which has been in force since 1946, is to reduce slightly imports credited to the United States and to increase those credited to Central and South American countries.

Exports are always credited to the country to which they are consigned.

Discrepancies in Trade Statistics between Canada and Other Countries.—Canadian statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Among the chief factors contributing to these discrepancies are:—

- (1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
- (2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual-aid shipments, postal and express shipments, or warehouse trade.
- (3) Differing definitions of territorial areas.
- (4) Differing systems of geographical classification of trade, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
- (5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

Treatment of Gold in Trade Statistics.—The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or "earmarking" the metal in the vaults of some central bank.

For these reasons, movements of gold in a primary or semi-fabricated state are excluded from the statistics of Canada's commodity trade. However, as gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a breakdown of the figures into transactions with individual countries is not possible.

The following statement gives the total of new gold production available for export. This series continues the series previously published under the title "Net Exports of Non-monetary Gold".

NEW GOLD PRODUCTION AVAILABLE FOR EXPORT (NET EXPORTS OF
NON-MONETARY GOLD), BY MONTH, 1945-52

¹ Includes other countries not specified.

The proportion of imports subject to duty varies widely between countries and geographic areas. Generally, the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average ad valorem rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries, or in the average ad valorem rates of duty charged on imports from different countries, therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

9.—Average Ad Valorem Rates of Duty Collected and Percentage Proportions of Imports from the United Kingdom and from the United States to Totals of Dutiable and Free Imports, 1939-52.

NOTE.—Figures for the years ended Mar. 31, 1868-1933, are given in the 1940 Year Book, p. 532.

Section 5.—Imports and Exports by Degree of Manufacture, by Origin and by Purpose

Analyses of Canada's trade from the angle of degree of manufacture of imports and exports with leading countries are of value to the student of economic relationships because they present, in summary form, details with significant meaning in the complementary relationship of manufacturing and commerce between geographical areas and countries.

15.—Imports according to Degree of Manufacture, by Leading Country, 1951 and 1952

Country	1951			1952

17.—Imports of Certain Raw Materials Used in Canadian Manufactures, 1943-52

NOTE.—Figures for the years ended Mar. 31, 1902-10, are given in the 1926 Year Book, p. 463; those for the years ended Mar. 31, 1911-39, are given in the 1940 edition, p. 533. Calendar-year figures are available only for 1926 and subsequent years; those for 1926-42 are given in the 1948-49 edition, pp. 927-928.

¹ In this classification the expression "Canadian Farm Products" refers to all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

Section 6.—Comparison of Value, Price and Volume of Foreign Trade

Since the end of World War II, the value of Canada's exports and imports has increased steadily. At the same time, the level of prices at which exports are sold and imports purchased has risen consistently. Changes in the value of exports and imports are the joint product of changes in the volume of goods traded and the prices at which transactions are conducted. To obtain a clear picture of the fluctuations in the merchandise trade of Canada it is desirable to isolate the contributions made to these fluctuations by the price and volume factors.

Special indexes of export and import prices have been developed to give this information. These indexes are based chiefly on average prices calculated from the trade statistics (supplemented in some cases by wholesale and other price

information) and combined according to the relative importance of the commodities in the trade of 1948. By dividing these price indexes into the trade values, the effects of price change can be removed from the values; or, by dividing the price index into an index of values, an index is obtained showing changes in the volume of trade from year to year. Table 22 gives the declared value of trade (adjusted for pricing purposes), the index of values based on 1948, the price index used to deflate the value index, and the resulting volume index.

The grouping of commodities used in this calculation differs slightly from that of the trade statistics, changes being necessary to simplify the pricing problem. The chief difference is that the two trade statistics groups "agricultural and vegetable products" and "animals and animal products" have been combined as "agricultural and animal products". Rubber and rubber products have been transferred from this group to the "miscellaneous" group, and a few other transfers have been made to improve the component material classification. The totals differ from those usually published by the exclusion of certain imports that are for the use of the United Kingdom Government or the governments of NATO countries.

Movements in price, value and volume have not always been the same. Export prices increased steadily from the end of the War until late in 1951, although the volume of exports fell off in 1949 and 1950. In 1952, export prices declined but the volume of goods shipped increased substantially. Import prices also rose steadily until 1951, but their decline in 1952 was sharper than in the case of exports. The volume of imports has also increased considerably since the War, the only halt in its growth coming in the period when the emergency exchange conservation controls were in force.

PART III.—EXTERNAL TRANSACTIONS*

Section 1.—Canadian Balance of International Payments

Wide fluctuations have been characteristic of both the current and capital accounts of the balance of payments in recent years. Following current account deficits of \$334,000,000 in 1950 and \$517,000,000 in 1951, the first since 1933, Canada had a modest current account surplus of \$151,000,000 in 1952. But these balances were small in relation to gross international exchanges of goods and services by Canada which totalled well over \$11,000,000,000 in 1952. The periods of deficit were influenced by the growth in the volume of goods and services imported in response to high levels of economic activity in Canada.

In 1952, a number of special factors contributed to the abrupt change, most of which occurred in the commodity balance. Owing to a substantial drop in import prices, the terms of trade moved in Canada's favour by 13 p.c. over 1951; this price change overshadowed the effects of changes in the volume of commodity exports and imports, both of which, however, reached new peaks. Particularly important in the increase in exports was the marketing of large crops of wheat and other grains at a time of strong world demand. Another dominating factor in the balance of payments was the continued large inflow of funds for direct investment and from the sale of new security issues. While the change in the current account was the main factor in strengthening the exchange rate from a premium on the U.S. dollar averaging about 5½ p.c. in 1951 to a discount of 2½ p.c. for 1952, the heavy capital inflows of the past few years have been a sustained underlying force. The movement in the exchange rate during 1952 led, however, to heavy equilibrating outflows of capital through liquidations by non-residents of holdings of outstanding Canadian securities and through short-term movements. As indicated by the current account surplus, capital outflows on balance exceeded the heavy inflows by \$151,000,000.

An important development in 1952 was the increase from \$434,000,000 to \$1,004,000,000 in the surplus with overseas countries. It was this change rather than the decrease of \$98,000,000 in the deficit with the United States that mainly

* Prepared in the International Payments Section, International Trade Division, Dominion Bureau of Statistics. More detailed information is given in the publication, *The Canadian Balance of International Payments in the Post-War Years, 1946-52*.

accounted for the improvement of \$668,000,000 in the current account balance. Considering the post-war period only, the surplus of \$1,004,000,000 with overseas countries was exceeded only by the surplus of \$1,183,000,000 in 1947. In that year, however, a substantial part of the balance was financed by credits extended by Canada. Reflecting increased bilateral disequilibrium in Canada's international transactions, exchange transfers in settlement of overseas balances reached a post-war record of \$1,008,000,000 in 1952, compared with \$436,000,000 in 1951.

Current Account Transactions.—The level of merchandise trade was very high in 1952. Unadjusted trade returns show an increase of 9.9 p.c. in the value of exports. This was attributable solely to a volume increase as export prices showed a slight decline for the year as a whole, having fallen steadily through 1952. The value of imports as shown in the trade returns was 1.3 p.c. lower than in 1951, reflecting an increase in volume of 12.6 p.c. offset by a price decrease of similar magnitude.

The marked improvement of 13.2 p.c. in the terms of trade was clearly the main factor in reversing the trade deficit of 1951. Declines in export prices were concentrated mainly in agricultural and animal products and fibres and textiles, with most of the other groups of exports showing relative stability of prices for the year as a whole. The volume of exports also showed a mixed picture, with particularly large increases in agricultural products, non-ferrous metals and miscellaneous products contrasting with stability or decreases in most of the other groups. Because of the two large crops of wheat and other grains and strong demand for them, the increase in exports of grains amounted to about three-quarters of the total increase in the value of exports. There were also large increases in exports of newsprint, base metals, automobiles and aircraft. These increases more than offset some important decreases, chief among which was the fall in exports of animals and products associated with the outbreak of foot-and-mouth disease and the imposition of an embargo by the United States. Exports of wood-pulp and of planks and boards were also lower. Most of the increase in the value of exports in 1952 was in sales to overseas countries and the aggregate value of exports to the United States showed little change from the high levels of 1951, although larger exports of newsprint, aircraft, grains and base metals offset decreases in beef, cattle and wood-pulp.

All groups of imports showed price declines for 1952 compared to 1951, with the largest decline occurring in agricultural and animal products, fibres and textiles, and miscellaneous products. The effect of these price declines was largely offset by increases in volume which reached a record level in 1952. The most striking volume increases were in imports of a number of miscellaneous products, including aircraft and machinery, engines and other products in the iron and products group. A number of important imports fell in value terms; some of the larger decreases were in imports of sugar, rubber, raw cotton, rolling-mill products, petroleum and coal. In some cases, increases in volume more than offset price declines. The major increases in value were in imports of non-farm machinery and parts, engines, electrical apparatus, and aircraft and parts. Imports of these items from the United States increased as investment in Canadian industry and defence activity grew. With the exception of raw cotton imports which fell in response to the world slump in demand for textiles, most of the other imports from the United States were maintained at a high level. Imports from Latin America rose during the year reflecting, in part, a diversion of sugar and cotton imports from other sources.

Imports from the United Kingdom reflected the decline in demand for textiles and associated sharp price decreases, as well as reduced imports of automobiles, although imports of machinery increased. Sharp drops in the prices of rubber, wool and other imports were mainly responsible for decreased imports from other sterling area countries. Imports from countries in Western Europe were affected by the fall in the demand for textiles and also by a decrease in imports of rolling-mill products.

When adjusted for balance-of-payments purposes, the decrease in the value of imports in 1952 was larger than that shown in the trade returns. Apart from the usual adjustments for non-commercial items and duplication with other parts of the current account, adjustments in 1951 and 1952 take account of the re-appearance of abnormal movements of commodities on government account. Payments on defence contracts have been substituted for the actual movements of the defence commodities. Since payments in 1951 exceeded actual imports, this adjustment increased the deficit on trade. On the other hand, in 1952 actual defence imports exceeded payments and the net effect of all adjustments was to raise by one-half the trade surplus as shown by the customs returns.

The deficit on non-merchandise items in 1952 was \$339,000,000, a decrease of \$31,000,000 from 1951. While the balance on travel account and inheritances and migrants' account deteriorated, improvements in other items, particularly on interest and dividend account, more than offset the deterioration. The deficit from all these transactions continued to be high because of large payments on income and travel account and for business services.

Capital Movements.—Inflows of long-term capital to finance Canadian development continued to be the dominant factor in the capital account in 1952. But, in contrast to earlier years, the coincidence of a current account surplus with these inflows led to a dramatic rise in the exchange value of the Canadian dollar and to equilibrating outflows of capital through the repatriation of Canadian bonds and debentures held abroad and through short-term capital movements.

Inflows for direct investment in foreign-controlled companies and branches have risen year by year since the end of the War and reached \$332,000,000 in 1952, about nine-tenths being from the United States. Investment in various phases of the petroleum industry accounted for more than one-half of the total and investment in mining and petroleum together represented nearly four-fifths.

There was a very substantial increase in outflows of capital from Canada for direct investment abroad, totalling \$64,000,000 in 1952 compared with \$20,000,000 in the preceding year. Most of the movement was to the United States where investment in beverage and other manufacturing industries, petroleum and other mining enterprises, and real estate were all important factors. Other outflows included the provision of additional capital for Canadian enterprises in Latin America and elsewhere. Retention of profits also contributed substantially to the growth of international direct investment between Canada and other countries.

Because of the flotation of new Canadian issues in the United States, there continued in 1952 to be a net capital inflow from transactions in Canadian securities, but trading in outstanding issues led on balance, for the first time since 1947, to an outflow. Net repurchases of bonds and debentures of governments and municipalities totalled \$184,000,000 but were offset to the extent of \$89,000,000 by sales

of corporate securities. In this respect trading followed the mixed pattern that developed in mid-1951. The long climb of the Canadian dollar on the exchange markets had a strong influence on transactions in government bonds and over this period more than offset, for non-resident investors, the effect of declining bond prices. Proceeds from new issues of Canadian securities sold to non-residents, mainly corporate and provincial issues, aggregated \$319,000,000, while retirements totalled \$89,000,000. Transactions in foreign securities led to a small outflow of capital as a result of financing of the International Bank for Reconstruction and Development but, on the whole, Canadians showed little interest in foreign issues during 1952.

Among other capital movements in 1952 were repayments of \$56,000,000 on Canadian loans to the United Kingdom and other governments, a reduction of \$66,000,000 in Canadian dollar holdings of foreigners, an increase of \$80,000,000 in official holdings of gold and U.S. dollars and a decrease of \$43,000,000 in official holdings of sterling. But the most spectacular change in the capital account in 1952 occurred in the category of "other capital movements" which showed an outflow of \$497,000,000 compared with an inflow of \$128,000,000 in 1951. The dominant inflows of capital for long-term investment in Canada coinciding with a surplus in the current account forced the exchange value of the Canadian dollar to a high of 104.3 cents in U.S. funds in August and September 1952. This high value influenced the equilibrating outflows through which Canada's international accounts were brought into balance. In addition to the heavy repatriation of government bonds and of Canadian dollar balances of non-residents already mentioned, there were very substantial increases in private and chartered bank balances and other short-term funds abroad, and decreases in accounts payable from the high levels established during 1950 and increased through the period of credit stringency in 1951.

Section 2.—Travel Between Canada and Other Countries

The total number of persons crossing the International Boundary into Canada in 1952 was nearly 48,000,000, an increase of more than 4,000,000 over the previous record established in 1951. American travellers accounted for over 26,000,000 of the entries, and nearly 22,000,000 were residents of Canada returning after visits to the United States.

Although there were more visitors to Canada from the United States than ever before, there was not a corresponding increase in the expenditures in Canada by American travellers. There were substantial increases, however, both in the number of Canadians travelling in the United States and in their expenditures in that country. Consequently, the principal change in Canada's travel account in 1952 was the excess of payments over receipts in the account with the United States which appeared for the first time. A credit balance of \$154,000,000 in 1948, when Canadian expenditures were restricted, was reduced progressively year by year to only \$12,000,000 in 1951 and was replaced by a debit balance of \$37,000,000 in 1952.

Compared with 1951, there was an increase of nearly 3,000,000 in the number of Canadian travellers returning during 1952 after visiting the United States and an increase of over 1,000,000 in the number of United States residents entering Canada. Although the number of visits to Canada by residents of the United States exceeded visits of Canadians to the United States by nearly 5,000,000 or 22 p.c., expenditures by Canadians in the United States exceeded expenditures of Americans in Canada by nearly \$37,000,000 or 14 p.c. Thus, residents of Canada spent an average of \$20.08 per capita in the United States during 1952, and residents of the United States spent an average of \$1.62 per capita in Canada. Rising purchases of merchandise by Canadian travellers in the United States made up a considerable part of the increase in expenditures.

There was also an adverse trend in the balance on overseas travel account during 1952, the increase in payments being higher than the increase in receipts. Canadians spent \$42,000,000 in overseas countries in 1952, \$8,000,000 more than in 1951, whereas expenditures in Canada of travellers from overseas countries increased by only \$2,000,000. Thus, the debit balance in Canada's travel account with overseas countries advanced from \$18,000,000 in 1951 to \$24,000,000 in 1952. With the additional \$37,000,000 debit balance in Canada's account with the United States, the total deficit was \$61,000,000 in account with all countries.

United States Travel Expenditures in Canada.—Expenditures by residents of the United States travelling in Canada decreased by \$1,000,000 from \$258,000,000 in 1951 to \$257,000,000 in 1952. Aggregate expenditures of the non-automobile traffic increased by \$8,000,000 or 8 p.c. when compared with 1951. Expenditures of traffic by common carrier had reached \$122,000,000 in 1949 and declined to \$112,000,000 in 1950 and \$106,000,000 in 1951. The increase in 1952, however, was not sufficient to offset a decrease of \$9,000,000 in expenditures of non-residents travelling in Canada by automobile, the first decline to be registered since 1943. Such expenditures had risen year by year from a low of \$17,000,000 in 1943 to a peak of \$152,000,000 in 1951. Lower average expenditures per visit for both the non-permit and customs-permit travellers were recorded in 1952, the decrease being consistent for both types of travel and distributed throughout the year. Average expenditures for automobile travellers on customs permits (excluding

special classes such as commuters, summer residents, etc.) dropped sharply, the declines varying from less than \$1 per car in British Columbia to over \$12 per car in Alberta. The decline in average expenditure per car was the result of lighter spending per day, judging from the fact that the trend toward a shorter length of stay, established during the previous five-year period, was checked in 1952. The average length of stay for motorists travelling in Canada on customs permits increased from 4.51 days in 1951 to 4.62 days in 1952. The average length of stay in Canada for non-automobile traffic declined during 1952.

Average expenditures of persons entering Canada by rail, bus and boat were higher in 1952, more than counteracting a slight drop in average expenditures of travellers by air and those in the "other travellers" category. The increase in the average expenditure per person-day was fairly substantial because the average length of visit for persons arriving by common carrier declined during 1952.

Canadian Travel Expenditures in the United States.—Expenditures by residents of Canada travelling in the United States climbed sharply from \$246,000,000 in 1951 to \$294,000,000 in 1952, an increase of 19 p.c. Compared with 1948 when maximum exchange restrictions were in force, the 1952 amount represented an increase of \$180,000,000, and compared with 1949 when restrictions had been reduced, the increase was \$129,000,000 or nearly 80 p.c. This was a much greater increase than that reported for all personal expenditures by Canadians on goods and services, an item that rose by 31 p.c. in the same three-year period. An important influence on this trend was the removal of most exchange restrictions on travel in October 1950, and of those remaining at the end of 1951, together with the higher value of the Canadian dollar in 1952.

Expenditures of Canadian motorists travelling in the United States increased by nearly \$25,000,000 in 1952, a gain of approximately 26 p.c. The greatest proportionate gain occurred in the two-day class where expenditures advanced \$10,000,000 or 54 p.c. Higher average expenditures per visit in addition to a gain of 37 p.c. in volume contributed to this increase. In 1951, the two-day class made up 6 p.c. of the total cars returning to Canada, increasing to 7 p.c. in 1952. Shopping trips remaining close to the 48-hour period in the United States may have been responsible for a considerable portion of the gain in the two-day class. Purchases declared under the \$100 customs exemption were \$66,000,000 in 1952, an increase of nearly \$20,000,000, and amounted to more than one-fifth of the total expenditures by Canadian travellers in the United States in that year.

Expenditures for the one-day class of automobile traffic increased from 1951 to 1952 in the same proportion as the volume, around 22 p.c. The gain in expenditures of the group staying more than two days in the United States was less pronounced than the gain in volume owing to a slight decline in the average expenditure per car. The average length of stay for cars staying over two days in the United States was also lower in 1952 than in 1951.

Expenditures of Canadians returning by rail increased by \$17,000,000 in 1952 over 1951, a gain of 29 p.c., although the increase in volume was only 5 p.c. Average expenditure per person increased by approximately 22 p.c., the gain being evenly

distributed throughout the year. Expenditures of Canadians returning by bus increased by \$3,000,000 in 1952 reflecting higher average expenditure per person. Expenditures of Canadians returning by air increased by approximately 19 p.c., the gain being in the same proportion as the increase in volume. Lower total expenditures of persons returning by boat and the "Other Travellers" were accounted for by lower average expenditures per person.

Travel Between Canada and Overseas Countries.—Visitors arriving in Canada direct from overseas countries numbered 22,000 in 1952, an increase of 21 p.c. over the previous year. In addition, an estimated 16,000 arrived from overseas countries via the United States, making a total of 38,000. Expenditures of these overseas travellers, including transportation costs paid to Canadian carriers, amounted to \$18,000,000, a figure slightly higher than in 1950 and 1951 and about the same as in 1949.

In 1952, 54,800 residents of Canada returned via Canadian ports after visiting overseas countries, an increase of 24 p.c. over 1951. Those arriving via United States ports numbered 10,000, the total of 64,800 being an increase of 17 p.c. over the previous year. Canadian travel expenditures in overseas countries, including transportation costs to non-Canadian carriers, amounted to \$42,000,000 in 1952, the highest ever recorded and an increase of 23 p.c. over 1951. Most of these expenditures were made in the United Kingdom and Europe. Expenditures in the United Kingdom increased from \$20,000,000 in 1951 to \$25,000,000 in 1952, and outlays in the OEEC (Organization of European Economic Co-operation) countries of Europe rose from \$8,000,000 to \$10,000,000 in the same comparison. Expenditures in other Commonwealth countries, amounting to \$5,000,000 in 1952, were made mostly in Bermuda and the British West Indies.

As stated previously, the adverse balance on overseas travel account during 1952 amounted to \$24,000,000, the highest on record.

Tourist Information.—Tourist information generally is supplied by the Canadian Government Travel Bureau, Ottawa, while detailed information on the National Parks and Historic Sites is available from the Department of Northern Affairs and National Resources, Ottawa. For advice regarding specific provinces or particular cities or resorts, the tourist may apply to the provincial or municipal bureau of information concerned. (*See* Directory of Sources of Official Information in Chapter XXVIII under the heading "Tourist Trade".)

PART IV.—THE GOVERNMENT AND FOREIGN TRADE

Section 1.—Foreign Trade Service and Associated Agencies concerned with the Development of Foreign Trade*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because of the fact that the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the

* Prepared in the several branches and divisions concerned and collated in the Information Branch, Department of Trade and Commerce, Ottawa.

Canadian economy. It is appreciated, however, that two-way trade should be encouraged in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities that are not indigenous to this country have to be imported from abroad. Some of these are required for Canadian industrial processes and others may be classed as consumer goods necessary for the maintenance of a high standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls, imposed by many countries for a variety of reasons, together with post-war foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives.

The Department of Trade and Commerce and associated agencies are at the disposal of exporters and importers engaged directly in the development of Canada's commercial relations with other countries. Services obtainable from the various branches, divisions and agencies are described below.

Canadian Trade Commissioner Service.—The Canadian Trade Commissioner Service is one of the important instruments in the continuous effort to increase Canadian international trade, to give world-wide distribution to Canadian products and to locate the best sources of supply for imports. With headquarters at Ottawa, the Service maintains 49 offices in 40 countries, staffed with trained Canadian trade officials and commodity specialists. The work of the Trade Commissioners in the field is co-ordinated at Ottawa by four Area Trade Officers. These officers are familiar with every aspect of foreign trade in their geographical or political areas and are responsible to the Director of the Service for the collection, preparation and presentation of information on all trade matters in their respective territories.

Trade Commissioners bring together exporters and importers of Canada and other countries. They study potential markets for specific Canadian products and report on the exact kind of goods in demand, competitive conditions, trade and exchange regulations, tariffs, shipping and packaging requirements, labelling, etc. Inquiries for Canadian goods are passed to the Department at Ottawa or directly to interested Canadian firms. For the Canadian importer, Trade Commissioners seek sources of supply of a wide variety of goods and, where necessary, furnish information on the Canadian market to the foreign exporter. The preparation of economic and other reports for departmental use is an important activity for the Trade Commissioner, while much attention is given to the dissemination of information on the Canadian International Trade Fair, securing exhibitors and encouraging the visits of foreign buyers. Assistance is also given to Canadian exhibitors at overseas trade fairs and a constant liaison is maintained with foreign government trade departments.

In countries where Canada maintains a diplomatic mission as well as a trade office, Trade Commissioners form an integral part of the mission and assume the title of Commercial Counsellor or Commercial Secretary. In some foreign countries they act as Consuls General, Consuls or Vice-Consuls, according to their status as Foreign Service Officers.

In order to provide Canadian manufacturers, exporters and importers with up-to-date information concerning their territories more effectively than is possible by correspondence, tours of Canadian industrial centres are arranged from time to

time for Trade Commissioners. Such direct contacts enable specific problems to be discussed and, at the same time, serve to bring into focus for the Trade Commissioner the Canadian industrial picture as a whole. He thus returns to his post with a knowledge of current Canadian conditions and in a better position to assist in the development and extension of Canadian trade opportunities.

FOREIGN TRADE SERVICE REPRESENTATIVES ABROAD, AS AT
OCT. 15, 1953

ARGENTINA.—C. S. Bissett, Commercial Counsellor, Canadian Embassy, Bartolomé Mitre 478, Buenos Aires. Territory includes Paraguay.

AUSTRALIA.—C. M. Croft, Commercial Counsellor for Canada, City Mutual Life Bldg., 60 Hunter Street, Sydney, N.S.W.

R. W. Blake, Commercial Secretary for Canada and Agricultural Secretary, 83 William Street, Melbourne.

BELGIAN CONGO.—A. B. Brodie, Canadian Government Trade Commissioner, Forescom Building, Leopoldville. Territory includes Angola and French Equatorial Africa.

BELGIUM.—T. J. Monty, Commercial Secretary, Canadian Embassy, 35 rue de la Science, Brussels. Territory includes Luxembourg.

BRAZIL.—C. R. Gallow, Commercial Secretary, Canadian Embassy, Edificio Metropole, Av. Presidente Wilson 165, Rio de Janeiro.

C. J. Van Tighem, Consul of Canada and Trade Commissioner, Canadian Consulate, Edificio Alois, Rua 7 de Abril 252, São Paulo.

CEYLON.—James J. Hurley, High Commissioner for Canada, Galle Face Hotel, Colombo.

CHILE.—M. R. M. Dale, Commercial Secretary, Canadian Embassy, 6th Floor, Av. General Bulnes, 129, Santiago.

COLOMBIA.—W. J. Millyard, Commercial Secretary, Canadian Embassy, Office 613, Av. Jimenez, No. 7-25, Bogota. Territory includes Ecuador.

CUBA.—G. A. BROWNE, Commercial Secretary, Canadian Embassy, Edificio Motor Centre, Calle Infanta 16, Havana.

DOMINICAN REPUBLIC.—R. E. Gravel, Canadian Government Trade Commissioner, Edificio Copello 410, Calle El Conde, Ciudad Trujillo. Territory includes Haiti and Puerto Rico.

EGYPT.—Acting Canadian Government Trade Commissioner, Osiris Building, Sharia Walda, Kasr-el-Doubara, Cairo. Territory includes Aden, Anglo-Egyptian Sudan, Cyprus, Ethiopia, Hashemite Jordan Kingdom and Saudi Arabia.

FRANCE.—Acting Commercial Secretary for Canada, 3 rue Scribe, Paris. Territory includes Algeria, French Morocco, French West Africa and Tunisia.

GERMANY.—B. A. Macdonald, Commercial Counsellor, Canadian Embassy, 22 Zitellmannstrasse, Bonn.

GREECE.—H. W. Richardson, Commercial Secretary, Canadian Embassy, 31 Vassillissis Sophias Ave., Athens. Territory includes Israel and Turkey.

GUATEMALA.—J. C. Depocas, Canadian Government Trade Commissioner, 28, 5a Avenida Sud, Guatemala City. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.

HONG KONG.—T. R. G. Fletcher, Canadian Government Trade Commissioner, Hong Kong and Shanghai Banking Corporation Building, Hong Kong. Territory includes China, Indo-China, Macao and Taiwan.

INDIA.—Richard Grew, Commercial Counsellor, Office of the High Commissioner for Canada, 4 Aurangzeb Road, New Delhi.
Acting Commercial Secretary for Canada, Gresham Assurance House, Mint Road, Bombay.

FOREIGN TRADE SERVICE REPRESENTATIVES ABROAD—continued

- INDONESIA.**—W. D. Wallace, Commercial Secretary, Canadian Embassy, Tanah Abang Timur 2, Djakarta.
- IRELAND.**—T. Grant Major, Commercial Counsellor, 66 Upper O'Connell Street, Dublin.
- ITALY.**—S. G. MacDonald, Commercial Counsellor, Canadian Embassy, Via Saverio Mercadante 15, Rome. Territory includes Libya, Malta and Yugoslavia.
- JAMAICA.**—M. B. Palmer, Canadian Government Trade Commissioner, Canadian Bank of Commerce Chambers, Kingston. Territory includes Bahamas and British Honduras.
- JAPAN.**—J. C. Britton, Commercial Counsellor, Canadian Embassy, Tokyo. Territory includes Korea.
- LEBANON.**—G. F. G. Hughes, Canadian Government Trade Commissioner, Centre Urbain Emir Beshir, Batiment A, Rue Emir Beshir, L'Azariah, Beirut. Territory includes Iraq and Syria.
- MEXICO.**—M. T. Stewart, Commercial Counsellor, Canadian Embassy, Edificio Internacional, Paseo de la Reforma, Mexico, D.F.
- THE NETHERLANDS.**—Acting Commercial Secretary, Canadian Embassy, Sophialaan 1-A, The Hague.
- NEW ZEALAND.**—L. S. Glass, Commercial Secretary, Office of the High Commissioner for Canada, Government Life Insurance Building, Wellington. Territory includes Fiji and Western Samoa.
- NORWAY.**—J. L. Mutter, Commercial Secretary, Canadian Legation, Fridtjof Nansens Place 5, Oslo. Territory includes Denmark and Greenland.
- PAKISTAN.**—R. K. Thomson, Commercial Secretary, Office of High Commissioner for Canada, Hotel Metropole, Victoria Road, Karachi. Territory includes Afghanistan and Iran.
- PERU.**—H. J. Horne, Commercial Secretary, Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima. Territory includes Bolivia.
- PHILIPPINES.**—F. H. Palmer, Consul General of Canada and Trade Commissioner, Ayala Building, Juan Luna Street, Manila.
- PORTUGAL.**—L. M. Cosgrave, Commercial Counsellor, Canadian Legation, Avenida de Praia da Vitoria 48-1^oD, Lisbon. Territory includes The Azores and Madeira.
- SINGAPORE.**—D. S. Armstrong, Canadian Government Trade Commissioner, Room D-5, Union Building, Singapore. Territory includes Brunei, Burma, Federation of Malaya, North Borneo, Sarawak and Thailand.
- SOUTH AFRICA.**—K. F. Noble, Canadian Government Trade Commissioner, Mutual Building, Harrison Street, Johannesburg. Territory includes Southern Rhodesia, Northern Rhodesia, Nyasaland, Portuguese East Africa, Kenya, Tanganyika, Uganda and Zanzibar.
- A. W. Evans, Canadian Government Trade Commissioner, Grand Parade Centre Building, Adderley Street, Cape Town. Territory includes South-West Africa, Mauritius and Madagascar.
- SPAIN.**—E. H. Maguire, Commercial Secretary, Canadian Embassy, Madrid. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio de Oro, Spanish Morocco and Tangier.
- SWEDEN.**—F. W. Fraser, Commercial Counsellor, Canadian Legation, Strandvagen, 7-C, Stockholm. Territory includes Finland.
- SWITZERLAND.**—Yves Lamontagne, Commercial Counsellor, Canadian Embassy, Kirchenfeldstrasse 88, Berne. Territory includes Austria, Czechoslovakia and Hungary.
- TRINIDAD.**—P. V. McLane, Canadian Government Trade Commissioner, Colonial Building, 72 South Quay, Port-of-Spain. Territory includes Barbados, Windward and Leeward Islands, British Guiana, Dutch Guiana, French Guiana, and French West Indies.

FOREIGN TRADE SERVICE REPRESENTATIVES ABROAD—continued

UNITED KINGDOM.—R. P. Bower, Commercial Counsellor, Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.

R. Campbell Smith, Commercial Secretary, Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1. Territory includes Iceland and British West Africa (Gambia, Gold Coast, Nigeria and Sierra Leone).

M. J. Vechslor, Canadian Government Trade Commissioner, Martins Bank Building, Water Street, Liverpool.

T. Grant Major, Canadian Government Trade Commissioner, 36 Victoria Square, Belfast. Territory includes Northern Ireland.

UNITED STATES.—R. G. C. Smith, Commercial Counsellor, Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington, D.C.

A. E. Bryan, Deputy Consul General of Canada and Trade Commissioner, Canadian Consulate General, 620 Fifth Avenue, New York, N.Y.

G. S. Patterson, Consul General of Canada, Canadian Consulate General, 532 Little Building, 80 Boylston Street, Boston 16, Mass.

D. S. Cole, Consul General of Canada, Canadian Consulate General, Chicago Daily News Building, 400 West Madison Street, Chicago, Ill.

B. C. Butler, Consul of Canada and Trade Commissioner, Canadian Consulate, 1035 Penobscot Building, Detroit 26, Mich.

Leslie G. Chance, Consul General of Canada, Canadian Consulate General, Associated Realty Building, 510 West Sixth St., Los Angeles 14, Cal.

G. A. Newman, Consul of Canada and Trade Commissioner, Canadian Consulate, 215-217 International Trade Mart, New Orleans, La.

C. C. Eberts, Consul General of Canada, Canadian Consulate General, 3rd Floor, Kohl Building, 400 Montgomery Street, San Francisco, Cal.

Norman Senior, Consul General of Canada, Canadian Consulate General, The Tower Building, 7th Ave. at Olive Way, Seattle, Wash.

URUGUAY.—W. Gibson-Smith, Commercial Secretary, Canadian Embassy, Montevideo.

VENEZUELA.—J. A. Stiles, Commercial Secretary, Canadian Embassy, Edificio Pan American, Puente Urapal, Caracas. Territory includes Netherlands Antilles.

AGRICULTURAL REPRESENTATIVES

ARGENTINA.—W. F. Hillhouse, Acting Agricultural Secretary, Canadian Embassy, Bartolomé Mitre 478, Buenos Aires. Territory includes Paraguay and Uruguay.

AUSTRALIA.—R. W. Blake, Agricultural Secretary for Canada, 83 William Street, Melbourne.

GERMANY.—Wm. Van Vliet, Agricultural Secretary, Canadian Embassy, 22 Zitelmannstrasse, Bonn.

ITALY.—Dr. C. F. Wilson, Agricultural Counsellor, Canadian Embassy, Via Saverio Mercadante 15, Rome.

THE NETHERLANDS.—C. J. Small, Acting Agricultural Secretary, Canadian Embassy, Sophialaan 1-A, The Hague. Territory includes Belgium, Denmark and Luxembourg.

UNITED KINGDOM.—D. A. B. Marshall, Commercial Secretary (Agricultural), Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.

UNITED STATES.—Dr. W. C. Hopper, Agricultural Counsellor, Canadian Embassy, 1746 Massachusetts Avenue, N.W., Washington, D.C.

VENEZUELA.—D. B. Laughton, Assistant Agricultural Secretary and Vice-Consul, Canadian Embassy, Edificio Pan American, Puente Urapal, Caracas. Territory includes Colombia.

FISHERIES REPRESENTATIVES

ITALY.—M. S. Strong, Commercial Secretary (Fisheries), Canadian Embassy, Via Saverio Mercadante 15, Rome.

FOREIGN TRADE SERVICE REPRESENTATIVES ABROAD—concluded

FISHERIES REPRESENTATIVES—concluded

JAMAICA.—E. M. Gosse, Canadian Trade Commissioner (Fisheries), Canadian Bank of Commerce Chambers, Kingston.

UNITED STATES.—M. B. Bursey, Consul of Canada and Trade Commissioner (Fisheries), Canadian Consulate General, 620 Fifth Avenue, New York, N.Y.

TIMBER REPRESENTATIVE

UNITED KINGDOM.—G. H. Rochester, Commercial Secretary (Timber), Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.

Commodities Branch.—The Commodities Branch is responsible for maintaining the close liaison with industry and the export and import trades in Canada that is essential to foreign trade promotion. It contains commodity specialists organized in the following sections: Machinery and Plant Equipment, Non-ferrous Metals and Industrial Minerals, Iron and Steel, Automotive and Agricultural Equipment, Wood and Wood Products, Chemicals, Oils and Minerals, Textiles, Leather and Rubber, Imported Fats, and a General Products Section covering a wide range of miscellaneous items such as toys, electrical appliances, office equipment, handicrafts and hardware. The Commodity Officers maintain contact with industry by personal visits and exchange of correspondence, and follow conditions abroad by communication with Canadian Government Trade Commissioners.

The work of the commodity specialists is co-ordinated by the Directors of the Export and Import Divisions. It is the function of the former to call the attention of Trade Commissioners to changes in supply conditions in Canada and, in turn, to see that market news received from Trade Commissioners is relayed to Canadian manufacturers and exporters. Close attention is paid to opportunities for developing sales abroad for Canadian products, and exporters are informed about regulations governing foreign trade.

The Director of the Import Division relays information obtained from Trade Commissioners on foreign supply conditions and directs business to the attention of the import trade in Canada. He also directs the attention of Trade Commissioners to special requirements in the Canadian market as these arise. The Division is concerned particularly in locating advantageous sources of supply of materials for manufacturers and in promoting Canadian interests in international commodity markets.

The Transportation and Trade Services Division of the Branch comprises a Transportation and Communications Section, an Export and Import Permit Section, a Token Import Plan Section, and a Directories Section. The Transportation and Communications Section maintains an active liaison with railway and steamship operators and agents, marine insurance companies, forwarding firms and brokerage houses, for the purpose of assisting and facilitating movements of merchandise, either import or export. The Section also maintains a close review on action by foreign governments, changes of rates and regulations, etc., such as would affect the transportation of Canadian goods or affect Canadian business interests.

The Export and Import Permit Section is responsible for the administration of permit control on the movement of scarce commodities and strategic materials subject to regulation under the powers of the Export and Import Permits Act.

Control is exercised over the export of arms and munitions, implements of war, atomic energy materials and other strategic items. In collaboration with foreign governments, this Section also operates an import certificate and delivery verification procedure, instituted as an insurance against critically important shipments being diverted to undesirable destinations. The number and types of commodities under control change materially from time to time, reflecting the constant effort to remove restrictions as soon as the necessity for them disappears. Directories are maintained, which include lists of Canadian manufacturers and other exporters, together with details of the products they are in a position to sell abroad, and also lists of Canadian importing houses and details of their foreign connections and their interests in the import field. These directories are confidential and are supplied only to Canadian Government Trade Commissioners.

Agriculture and Fisheries Branch.—The main functions of this Branch include: (1) trade promotion relating to agricultural and fisheries products; (2) the programming, receiving and disseminating of information on foreign agriculture and fisheries; and (3) acting as a focal point for liaison on agricultural and fisheries matters with the Department of Agriculture, the Department of Fisheries, the Canadian Wheat Board, and other government departments and boards.

In the field of trade promotion, the Grain Division and the Food and Agriculture Division assist Canadian exporters of agricultural and fisheries products in finding markets in other countries. Canadian firms are supplied with information with respect to market conditions and requirements in foreign markets, competition from other sources of supply, exchange and tariff restrictions and other related information. Canadian Trade Commissioners throughout the world are kept fully informed on such matters as production and price trends in Canada, quantities of commodities available for export and sources of supply.

The Grain Division deals specifically with matters relating to Canada's grain trade. Assistance is rendered foreign governments and other buyers in the purchase of Canadian wheat, flour and other cereals. Close contact is maintained with the flour millers as well as daily liaison with the Canadian Wheat Board.

The Commodity Officers concerned with live stock, live-stock products, meat, dairy and poultry products, fruits and vegetables, and fish and fisheries products, keep in contact with the trade and trade organizations dealing with these commodities. They are in close touch with the officers of other departments of government concerned with the disposition of Canadian production surplus to domestic requirements, and who are responsible for such items as health standards, grading and inspection.

A great deal of information pertaining to foreign agriculture and fisheries is received from the Canadian Trade Commissioners. This material, which reflects foreign government policy, production trends and market information, is processed in the Branch and distributed to the departments of government concerned and others interested. Much of it is published in *Foreign Trade*. The Trade Commissioner Service includes a number of officers who deal specifically with agricultural and fisheries matters. Some of these officers are located in Canada's most important export outlets and others in those countries with which Canada competes on world markets, particularly in such commodities as wheat, coarse grains, live stock, meats and dairy products. The information received from the agricultural officers and other Trade Commissioners on foreign agricultural developments is distributed in Canada through publications issued by the Economics Division of the Department

of Agriculture and by direct communication with producers and exporters. Fisheries information from abroad is passed immediately to the Department of Fisheries, the provincial departments concerned, the Fisheries Council, and to fish exporters.

International Trade Relations Branch.—This Branch deals with a wide variety of current trade issues, ranging from the analysis of developments in international commercial relations to assisting in the reopening of dollar markets for Canadian products in Europe and to finding practical solutions for tariff difficulties encountered by Canadian exporters. The Branch has under constant review Canada's trading relations with other countries, and studies the effects of the work of such international organizations as the European Payments Union and the Organization for European Economic Co-operation on Canadian and world trade.

Trade treaties are under continuous examination by the Branch, which is responsible for the preparation of material for trade and tariff negotiations with other countries. Material is collected on foreign tariffs, customs legislation, taxes affecting trade, import licensing, exchange regulations, documentation, sanitation, marking and labelling requirements, and measures pertaining to quotas, embargoes and other import restrictions. These data are analysed, interpreted, clarified and made available in easily comprehensible form to exporters, government officials and other export interests.

Exporters who encounter difficulties resulting from the trade policies or regulations of other countries are given expert advice and interpretations of foreign regulations. Also, the Branch initiates official consultations with other governments respecting such problems.

Economics Division.—The Economics Division maintains a continuous review of business conditions in Canada. To do this, it is necessary to analyse foreign trade trends and to appraise their effect on economic development in Canada. Other aspects of the general economic situation considered include investment, consumption, production, prices, incomes and employment, as well as conditions in industries and localities.

Industrial Development Division.—This Division co-ordinates the assistance offered by the Federal Government in the establishment of new industries in Canada. Acting in this capacity, the Division provides information on a multiplicity of matters pertaining to industry establishment and assists in solving the variety of problems encountered by Canadian and foreign businessmen.

The Division also aids those established firms that wish to expand into new lines of production. Inquiries from foreign firms and individuals regarding the manufacture of products in Canada under licence or royalty are screened and brought to the attention of Canadian manufacturers interested in producing additional items.

The Division acts in an advisory capacity to the Immigration Branch of the Department of Citizenship and Immigration regarding the admission of individuals, other than those from Commonwealth countries and the United States, who wish to establish new industries in Canada.

The Division works in close co-operation with a widespread network of organizations throughout Canada, including industrial development departments of the provinces, municipalities, railways, banks, power companies, chambers of commerce, boards of trade, and the Canadian Manufacturers' Association.

Information Branch.—The principal function of the Information Branch is to furnish the commercial community of Canada with information concerning the assistance that exporters and importers may obtain from the Department of Trade and Commerce. The Branch is responsible also for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to the sources of supply for raw materials and consumer goods unobtainable in Canada. Its principal educational and informative medium is *Foreign Trade*, the weekly publication of the Foreign Trade Service, in which are reproduced reports of Canadian Trade Commissioners on conditions in their respective territories, articles by Head Office personnel and economists of the Dominion Bureau of Statistics, news items and charts portraying trade trends. Press releases are prepared and distributed to newspapers at home, and material of a similar character dispatched to Canadian Trade Commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's foreign trade. The educational and promotional work of this Branch is supported by advertising at home and abroad, through the daily press, periodicals and trade papers as well as films and radio.

Canadian Government Exhibition Commission.—The Canadian Government Exhibition Commission by graphic media of all kinds publicizes Canada and helps to sell Canadian products abroad. The Commission is solely responsible for the construction and administration of Federal Government exhibits at international expositions, trade fairs and displays outside Canada and of international expositions and trade fairs held in Canada and sponsored by the Government of Canada. The Commission's first fulfilment of the latter responsibility was the development of the Canadian International Trade Fair, held annually at Toronto since 1948.

The Commission also co-operates with Canadian exporters in securing representation for goods at trade fairs and trade promotional displays and is equipped to advise individual Canadian companies in the preparation of exhibits. It distributes at its various presentations large quantities of literature produced by other government departments and agencies.

Export Credits Insurance Corporation.—The Export Credits Insurance Corporation was established under the provisions of the Export Credits Insurance Act, 1944, and as amended in August 1946 and May 1948. The Corporation, which is administered by a board of directors including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada, insures exporters against losses arising from credit and political risks involved in the export or an agreement for the export of goods. Policies are generally issued on a yearly basis, covering exporters' sales to all countries. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under two main classifications—general commodities and capital goods. Coverage for general commodities can be procured by exporters under two types of policies: (1) the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or (2) the Shipments Policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit for lengthy periods is often necessary. Specific policies are issued for transactions involving capital goods but the general terms and conditions are the same as those applicable to policies for general commodities.

The Corporation insures exporters on a co-insurance basis up to a maximum of 85 p.c. of the gross invoice value of shipments. This co-insurance basis also operates in the distribution of recoveries obtained after payment of a loss, and these recoveries are shared by the Corporation and the exporter in the proportions of 85 and 15 p.c., respectively.

The Corporation, from its inception to Dec. 31, 1952, issued policies having a total value of \$374,549,750. Claims paid to exporters during the same period amounted to \$1,702,705. A large majority of these claims resulted from exchange transfer difficulties, with relatively few arising from insolvencies. Recoveries made amounted to \$592,403. Excess of income over expenditure to Dec. 31, 1952, was \$1,631,617, which was added to the Corporation's underwriting reserve.

International Economic and Technical Co-operation Division.—The administration of Canada's participation in the Colombo Plan—a Commonwealth effort to help the peoples of south and southeast Asia to raise their standards of living and productivity—is the responsibility of this Division. This contribution is of two types—capital aid and technical co-operation. Under capital assistance, grants of goods or services are made to countries in the area on a government-to-government basis. Technical co-operation embraces the training of Asian peoples in a variety of fields in Canada and the supplying of Canadian experts to advise and instruct abroad. The Division also assists the United Nations and its specialized agencies in the recruiting of technical experts and in the arrangement of courses of instruction for trainees sent to Canada for study. For the year ended Mar. 31, 1954, \$25,000,000 was voted by Parliament for capital aid and an additional \$400,000 was provided for the Colombo Plan technical co-operation program.

Section 2.—The Development of Tariffs

A short sketch of trade and tariffs prior to Confederation is given in the 1940 Year Book, pp. 480-482. The 1942 Year Book, pp. 427-428, traces the development from Confederation to the adoption in 1904 of the present form of preferential tariff.

Owing to the limitations of space in the Year Book, it has been necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments can be found.

Subsection 1.—The Canadian Tariff Structure*

The Canadian Tariff consists mainly of three sets of tariff rates—British Preferential, Most-Favoured-Nation, and General. British Preferential rates consist of a specially low rate of duty on almost all imported dutiable commodities and apply to specified goods from Commonwealth countries if shipped direct to Canada. On certain goods special rates may be applied under the British Preferential Tariff; these special rates are lower on those goods than the ordinary British Preferential scale. Most-Favoured-Nation tariff rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. To certain non-Commonwealth countries, a special concession under the Most-Favoured-Nation rates may be granted and rates lower than those of the Most-Favoured-Nation tariff may apply by agreement. The General Tariff is levied on all imports that do not qualify for Preferential or Most-Favoured-Nation tariff treatment.

In all cases where the tariff applies, there are provisions for drawbacks of duty on imported materials used in the manufacture of products later exported. The purpose of these drawbacks is to give Canadian manufacturers a fair basis of competition with foreign producers of similar goods where it is felt to be warranted. A second class of drawbacks known as 'home consumption' drawbacks apply mainly to imported materials and parts used in the production of specified classes of goods manufactured for home consumption.

Too often one-sided competition arises out of unfair practices, such as dumping or the manipulation of exchange advantages. Wide powers have been given, in certain instances, to supplement tariff provisions. Thus, the Minister of National Revenue or, through him, the customs officials have been empowered at times to establish a 'fair market value' as a basis of applying duties to be collected. The term 'fair market value' is vague and open to various interpretations and has been frequently criticized but, in exceptional cases of imports from General Tariff countries, arbitrary valuations have proved effective.

The exchange situation as it affects the Tariff is a different problem. A foreign currency that has become considerably depreciated in relation to the Canadian dollar enables the country concerned to export goods to Canada under a very definite advantage and customs officials have been given power, under conditions such as these, to value imports from such countries at a "fair rate of exchange". While this power has been applied to meet extraordinary conditions in the past, it has now been modified by clauses in trade agreements drawn up with individual countries.

The Tariff Board.—The Tariff Board, constituted by the Tariff Board Act, 1931, consists of three members, one of whom is chairman and another vice-chairman. The duties and powers of the Board derive from three Statutes of Canada: the Tariff Board Act, the Customs Act, and the Excise Tax Act.

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise and on which the Minister of Finance desires information. The investigation into any such matter may include inquiry as to the effect that an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade and the extent to which

* The schedules and rates in force at any particular time may be obtained from the Department of National Revenue, Ottawa, which is responsible for administering the Canadian Tariff.

the consumer is protected from exploitation. It is also the duty of the Board to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report. Usually the references take one of two forms: authority for review of sections of the Customs Tariff relating to an entire industry, or for investigation in respect of specified commodities. Reports are tabled in Parliament.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board is authorized to act as a tribunal to hear appeals from rulings of the Department of National Revenue in respect of matters of administration including those of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive, with provision for appeal on questions of law to the Exchequer Court of Canada. Tariff references and appeals receive public hearings at which interested parties submit oral statements and written briefs relating to matters under consideration.

Subsection 2.—Tariff and Trade Arrangements with other Countries, as at June 1, 1953

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements are as follows: Australia, British West Indies, Ceylon, Ireland, New Zealand, Union of South Africa, and the United Kingdom and Colonies. These agreements have been modified and supplemented by the GATT. Preferential arrangements are also in force with respect to Southern Rhodesia, India and Pakistan.

Canada exchanges most-favoured-nation treatment with 24 countries under the General Agreement on Tariffs and Trade. The Protocol of Provisional Application of the General Agreement on Tariffs and Trade was signed by Canada on Oct. 30, 1947, and brought the Agreement into force on Jan. 1, 1948.

The GATT is a multilateral trade agreement and the most-favoured-nation rates of duty bound under it apply equally to all signatories. The Agreement consists of three parts: the general provisions related to the schedules of tariff concessions and the exchange of most-favoured-nation treatment; the provisions relating to a code of regulations for conducting international trade; and the administrative provisions of the Agreement.

Under the new system of multilateral tariff negotiations, initiated under the GATT, three conferences have taken place: at Geneva, Switzerland, in 1947; at Annecy, France, in 1949; and at Torquay, England, in 1950-51. The tariff concessions Canada granted and received at the Geneva Conference are described in the 1948-49 Year Book, pp. 875-877, and those negotiated at Annecy are discussed in the 1950 Year Book, pp. 968-970. The Torquay negotiations were discussed in the 1952-53 edition, pp. 996-997. The existing tariff concessions remain in force until Jan. 1, 1954, and thereafter, unless modified in accordance with the terms of the Agreement.

Canada already had most-favoured-nation trade agreements with a number of GATT members prior to the effective date of the General Agreement. These agreements with individual countries continue in force in conjunction with the General Agreement. As an exception, however, the Canada-U.S. Trade Agreement of 1938 is suspended for so long as both countries continue to be contracting parties to GATT.

**Tariff and Trade Arrangements with Commonwealth Countries, as at
June 1, 1953**

Country	Agreement	Terms
AUSTRALIA.....	Trade Agreement signed July 8, 1931; in force Aug. 3, 1931. GATT effective Jan. 1, 1948.	Agreement includes schedules of tariff rates and exchange of British preferential rates on items not scheduled. May be terminated on six months notice.
BRITISH WEST INDIES (BAHAMAS, BARBADOS, BRITISH HONDURAS, JAMAICA, LEEWARD AND WINDWARD ISLANDS, TRINIDAD AND TOBAGO), BER- MUDA AND BRITISH GUIANA.	Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. The British West Indies, with the exception of Jamaica, are contracting parties to GATT.	The parties exchange specified tariff preferences. Agreement may be terminated on six months notice.
CEYLON.....	Ceylon is a party to the Trade Agreement of 1937 between United Kingdom and Canada. GATT effective July 29, 1948.	Canada and Ceylon exchange preferential tariff treatment.
INDIA.....	Since 1897, Canada has unilaterally accorded British preferential treatment to India but without contractual obligation. GATT effective July 8, 1948.	
IRELAND.....	Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933.	Canada grants British preferential tariff in return for preferential rates where such exist and for most-favoured-nation rates on non-preferential items. May be terminated on six months notice.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July 26, 1948.	The parties exchange specific preferences on scheduled goods and reciprocally concede British preferential rates on items not scheduled. May be terminated on six months notice.
PAKISTAN.....	Since 1947, Canada has unilaterally accorded Pakistan British preferential treatment but without contractual obligation. GATT effective July 30, 1948.	
SOUTHERN RHODESIA..	Trade Agreement of Aug. 20, 1932, was terminated on Jan. 2, 1938, on notice from Southern Rhodesia. Tariff treatment established therein continues to be reciprocally accorded. GATT effective May 19, 1948.	Canada grants British preferential treatment and Southern Rhodesia extends tariff preferences granted to Commonwealth countries other than the United Kingdom.
UNION OF SOUTH AFRICA.	Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. Exchange of notes Aug. 2-31, 1935; effective retroactive from July 1, 1935. GATT effective June 14, 1948.	Agreement includes schedules of tariff preferences granted by each country. May be terminated on six months notice. Exchange of most-favoured-nation treatment. May be terminated on six months notice.

**Tariff and Trade Arrangements with Commonwealth Countries, as at
June 1, 1953—concluded**

Country	Agreement	Terms
UNITED KINGDOM.....	Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. Modified by an exchange of letters of Nov. 16, 1938, and an exchange of notes Oct. 30, 1947. GATT effective Jan. 1, 1948.	Various concessions by both countries including exchange of preferential tariff rates (some minor reservations by Canada). Extends to Colonial Empire.

**Tariff and Trade Arrangements with Non-Commonwealth Countries, as at
June 1, 1953**

Country	Agreement	Terms
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941.	Exchange of most - favoured - nation treatment. Provisional application may be terminated on three months notice.
AUSTRIA.....	GATT effective Oct. 19, 1951.	
BENELUX (BELGIUM, LUXEMBOURG AND THE NETHERLANDS).	Convention of Commerce with Belgium (including Luxembourg and Belgian colonies) entered into effect Oct. 22, 1924. The Convention was suspended during the War but reinstated by exchange of notes Feb. 1 and 5, 1946; includes Netherlands Antilles and Surinam. GATT covering Benelux as a whole effective Jan. 1, 1948.	Exchange of most - favoured - nation tariff treatment. May be terminated on one years notice.
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom — Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most - favoured - nation treatment. May be terminated on one years notice.
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. GATT effective July 31, 1948.	Exchange of most - favoured - nation treatment. May be terminated on six months notice.
BURMA.....	GATT effective July 29, 1948.	
CHILE.....	Trade Agreement signed Sept. 10, 1941; in force provisionally Oct. 15, 1941, and definitively on Oct. 29, 1943. GATT effective Mar. 16, 1948.	Exchange of most - favoured - nation treatment. May be terminated on six months notice.
CHINA.....	<i>Modus vivendi</i> signed Sept. 26, 1946; in effect since Sept. 28, 1946. China withdrew from GATT on May 5, 1950.	Exchange of most - favoured - nation treatment. May be terminated on three months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries, as at
June 1, 1953—continued**

Country	Agreement	Terms
COLOMBIA.....	Treaty of Commerce with United Kingdom of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938. A Trade Agreement between Colombia and Canada was signed Feb. 20, 1946, but has not been put into force.	Exchange of most - favoured - nation treatment. May be terminated on three months notice.
COSTA RICA.....	<i>Modus vivendi</i> signed Nov. 18, 1950; brought into force Jan. 26, 1951.	Exchange of most - favoured - nation treatment. May be terminated on three months notice.
CUBA.....	GATT effective Jan. 1, 1948.	
CZECHOSLOVAKIA.....	Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. GATT effective May 21, 1948.	Exchange of most - favoured - nation treatment. May be terminated on one years notice.
DENMARK (including GREENLAND).	Treaties of Peace and Commerce with United Kingdom of Feb. 13, 1660, and July 11, 1670, apply to Canada. GATT effective May 28, 1950.	Exchange of most - favoured - nation treatment. Declaration of May 9, 1912, provides means for separate termination by Dominions on one years notice.
DOMINICAN REPUBLIC.	Trade Agreement signed Mar. 8, 1940; in force provisionally Mar. 15, 1950, and definitively Jan. 22, 1941. GATT effective May 19, 1950.	Exchange of most - favoured - nation treatment including scheduled concessions. May be terminated on six months notice.
ECUADOR.....	<i>Modus vivendi</i> signed Nov. 10, 1950; in force Dec. 1, 1950.	Exchange of most - favoured - nation treatment. May be terminated on three months notice.
EGYPT.....	Exchange of notes Nov. 26 and Dec. 3, 1952; in force Dec. 3, 1952.	Exchange of most - favoured - nation rates. May be terminated on six months notice.
EL SALVADOR.....	Exchange of notes of Nov. 2, 1937; in force Nov. 17, 1937.	Exchange of most - favoured - nation treatment. May be terminated on four months notice.
FINLAND.....	Exchange of notes of Nov. 13-17, 1948; effective Nov. 17, 1948. GATT effective May 25, 1950.	Exchange of most - favoured - nation treatment. May be terminated on three months notice.
FRANCE AND FRENCH OVERSEAS TERRITORIES.	Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of notes of Sept. 29, 1934, and additional protocol of Feb. 26, 1935. GATT effective Jan. 1, 1948.	Exchange of most - favoured - nation treatment including scheduled concessions. May be terminated on three months notice.
FEDERAL REPUBLIC OF GERMANY.	GATT effective Oct. 1, 1951.	

**Tariff and Trade Arrangements with Non-Commonwealth Countries, as at
June 1, 1953—continued**

Country	Agreement	Terms
GREECE.....	<i>Modus vivendi</i> by exchange of notes of July 24-28, 1947; effective Aug. 28, 1947. GATT effective Mar. 1, 1950.	Exchange of most - favoured - nation treatment. May be terminated on three months notice.
GREENLAND.....	(See Denmark.)	
GUATEMALA.....	Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939.	Exchange of most - favoured - nation treatment. May be terminated on six months notice.
HAWAII.....	Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939. GATT effective Jan. 1, 1950.	Exchange of most - favoured - nation treatment. May be terminated on six months notice.
ICELAND.....	Although there is no contractual obligation, Canada and Iceland adhere to the terms of a treaty originally concluded between Denmark and the United Kingdom on Feb. 13, 1660.	Exchange of most - favoured - nation treatment.
INDONESIA.....	GATT effective Mar. 1, 1948.	
IRAN.....	Special arrangement by Order in Council effective Feb. 1, 1951.	Canada grants most - favoured - nation tariff rates as long as Iran accords reciprocal treatment.
IRAQ.....	Special arrangement by Order in Council effective Sept. 15, 1951.	Canada grants and receives most-favoured-nation tariff rates.
ISRAEL.....	Canada-United Kingdom Agreement of 1937 applied under the British Palestine Mandate. Since the creation of the State of Israel in May 1948, Canada has continued to grant most-favoured-nation rates.	
ITALY.....	<i>Modus vivendi</i> by exchange of notes of Apr. 23-28, 1948; effective Apr. 28, 1948. GATT effective Jan. 1, 1950.	Exchange of most - favoured - nation treatment. May be terminated on three months notice.
KOREA.....	Participated in Torquay negotiations but has not yet (June 1953) become a Contracting Party to GATT.	
LEBANON.....	Special arrangement by Order in Council of Nov. 19, 1946. Lebanon withdrew from GATT Mar. 1, 1951.	Canada grants most - favoured - nation tariff rates as long as Lebanon accords reciprocal treatment.
LIBERIA.....	GATT effective Jan. 1, 1950.	
MEXICO.....	Trade Agreement signed Feb. 8, 1946; in force provisionally same date. Ratifications exchanged on May 6, 1947; definitively in force 30 days from that date.	Exchange of most - favoured - nation treatment. May be terminated on six months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries, as at
June 1, 1953—continued**

Country	Agreement	Terms
NICARAGUA.....	Trade Agreement signed Dec. 19, 1946; in force provisionally same date. GATT effective May 28, 1950.	Exchange of most - favoured - nation treatment. Provisional application may be terminated on three months notice.
NORWAY.....	Convention of Commerce and Navigation with United Kingdom of Mar. 18, 1826, applied to Canada. GATT effective July 10, 1948.	Exchange of most - favoured - nation treatment. Convention of May 16, 1913, provides means for separate termination by Dominions on one years notice.
PANAMA.....	Order in Council of July 20, 1935, accepted Article 12 of United Kingdom - Panama Treaty of Commerce of Sept. 25, 1928. Treaty terminated in 1942 but Canada continues to grant and receive most - favoured - nation tariff rates.	
PARAGUAY.....	Exchange of notes of May 21, 1940; in force June 21, 1940.	Exchange of most - favoured - nation treatment. May be terminated on three months notice.
PERU.....	GATT effective Oct. 8, 1951.	
PHILIPPINES.....	No agreement at present. United States-Canada Agreement of 1938 (now suspended) applied to Philippines until Philippines attained independence in 1946. Canada and Philippines have continued to exchange most-favoured-nation treatment. Participated in Torquay negotiations but has not yet (June 1953) become a Contracting Party to GATT.	
POLAND.....	Convention of Commerce signed July 3, 1935; in force Aug. 15, 1936.	Exchange of most-favoured-nation treatment including scheduled reductions. May be terminated on three months notice.
PORTUGAL, including MADEIRA, PORTO SANTO AND THE AZORES.	Trade Agreements Act of June 11, 1928, accepted Article 21 of the United Kingdom - Portugal Treaty of Commerce of Aug. 12, 1914; in force Oct. 1, 1928.	Exchange of most - favoured - nation treatment. May be terminated on one years notice.
SPAIN.....	Canada adheres to the United Kingdom - Spain Treaty of Commerce of Oct. 31, 1922 (revised Apr. 5, 1927); in force Aug. 1, 1928.	Exchange of most - favoured - nation treatment. May be terminated on six months notice.
SWEDEN.....	United Kingdom-Sweden Convention of Commerce and Navigation of Mar. 18, 1826, applies to Canada. GATT effective May 1, 1950.	Exchange of most - favoured - nation treatment. Declaration of Nov. 27, 1911, provides means for separate termination by Dominions on one years notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries, as at
June 1, 1953—concluded**

Country	Agreement	Terms
SWITZERLAND.....	United Kingdom - Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 8, 1855, applies to Canada. By exchange of notes Liechtenstein included under terms of this agreement, effective Aug. 2, 1947.	Exchange of most - favoured - nation treatment. Convention of Mar. 30, 1914, provides means for separate termination by the Dominions on one years notice.
SYRIA.....	Special Arrangement by Order in Council of Nov. 19, 1946. Syria withdrew from GATT Aug. 6, 1951.	Canada grants most - favoured - nation tariff rates as long as Syria accords reciprocal treatment.
TURKEY.....	Exchange of notes signed Mar. 1, 1948; in effect Mar. 15, 1948. GATT effective Oct. 17, 1951.	Exchange of most - favoured - nation treatment. May be terminated on three months notice.
UNITED STATES.....	Trade Agreement signed Nov. 17, 1938, suspended as long as both countries continue to be contracting parties to GATT. GATT effective Jan. 1, 1948.	
URUGUAY.....	Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. Participated in Torquay negotiations but has not yet (June 1953) become a Contracting Party to GATT.	Exchange of most - favoured - nation treatment. May be terminated on six months notice.
VENEZUELA.....	<i>Modus vivendi</i> signed and brought into force Oct. 11, 1950; renewed Oct. 11, 1951, and Oct. 11, 1952.	Exchange of most - favoured - nation treatment. Made for one year subject to annual renewal.
YUGOSLAVIA.....	Trade Agreements Act of June 11, 1928, accepted Article 30 of United Kingdom - Serb - Croat - Slovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928.	Exchange of most - favoured - nation treatment. May be terminated on one years notice.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Index Numbers of Wholesale Prices

Wholesale prices are not restricted in this Chapter to the normal meaning of that word but may include price quotations ranging from those paid by primary producers for basic raw materials to prices paid by retailers for finished articles. Within this broad group, numerous sub-classifications are available, such as component material, degree of manufacture and special purpose series. Wholesale prices are frequently very sensitive to changing conditions and are often used to gauge the economic effect of events as well as to forecast retail price change. An example of this is the price increase that followed the outbreak of hostilities in Korea in 1950.

A new series of wholesale price index numbers, related to the base period 1935-39, was introduced in January 1951. Background material concerning the construction of this index is available in DBS Reference Paper No. 24, *Wholesale Price Indexes, 1913-1950*.

Wholesale price index numbers in Canada cover the period dating from Confederation in 1867. An intermittent decline characterized the first 30 years of this interval but, from an average of 56·8 in 1897, the general wholesale index (1935-39 = 100) advanced without appreciable interruption to 83·9 in July 1914. By November 1918, this index had reached 173·1 and continued upward to a post-war inflationary peak of 214·2 in May 1920. The subsequent deflationary period lasted about two years, and between 1922 and 1929 price levels remained comparatively stable. Annual averages in this interval held between a high of 133·8 for 1925 and 124·6 for 1929. For the four years following 1929, depressionary influences were so severe that prices fell almost to the level of those of 1913. In February 1933, the wholesale index touched an extreme low of 82·8 before turning upward again. Irregular recovery then continued until 1937, but the highest point reached, 110·6 in July 1937, was substantially below the 1926 average. The collapse of the wheat market in 1938, together with a fairly general depression in other markets, carried wholesale price levels just prior to the outbreak of war in 1939 down to about 15 p.c. above the 1913 level. The August 1939 index of 95·6 marked the extreme low of a two-year decline. The movement of prices prior to the outbreak of World War I was very different from that which preceded World War II. The relatively low level of prices in August 1939 probably influenced the sharper initial advance at the outbreak of war. However, during 1940, price levels steadied and showed

* Revised in the Prices Section, Labour and Prices Division, Dominion Bureau of Statistics.

no sign of a steep increase until 1941. By that time, great expansion in wartime production had made serious inroads into stocks of nearly all basic commodities and, at the end of 1941, wheat remained the only important commodity for which stocks exceeded predictable requirements. The introduction of general price control in December 1941 ended a year in which wholesale prices had advanced 10 p.c. as compared with about 3 p.c. in 1940. The effectiveness of price control is indicated by the fact that increases in wholesale prices amounted to only 3.1 p.c. and 5.2 p.c. during the years 1942 and 1943, respectively, while the December 1944 index was slightly below the December 1943 figure. The December 1945 index of 132.9 was 10 p.c. above that for December 1941, when price control became generally effective.

The precipitous advance in United States general wholesale prices that began during the latter half of 1946 was of great concern to Canadian price-control authorities. The advance had been anticipated in July 1946, when the Canadian dollar was returned to par with the United States dollar, thus reducing the Canadian dollar cost of imports from the United States. This provided a buffer of 10 p.c. only and the rise in United States prices was greater than that on a large majority of imported articles so that continuous pressure was felt, especially among individual items. The Canadian general wholesale price index rose from 132.3 to 142.5, an increase of over 8 p.c. between May 1945 and December 1946.

The Canadian price rise accelerated in 1947 as internal controls continued to be relaxed. The monthly general wholesale index advanced without interruption from 142.5 at December 1946 to 179.9 at December 1947, an increase of 26 p.c. The rise carried through into 1948, although at a decreasing rate, and by December the index had reached a level of 202.0. Wholesale price levels during 1949 were generally stable, then rose slightly during the first five months of 1950 to reach an index level of 204.7 by May. In June, a sharp gain to 209.2 occurred, owing mainly to rapidly advancing prices for live stock, lumber, iron and steel products and non-ferrous metals. An important factor stimulating further advance was the outbreak of war in Korea. The effect on basic commodities originating in or near that area was particularly sharp and by the end of the year the index had risen to 225.2.

In 1951, the index reached new peak levels, culminating in an all-time high of 243.7 in July. This trend was reversed in the second half of the year when the index declined steadily, reflecting marked recessions in animal products and textile products. The December 1951 index at 237.7, however, was still 5.6 p.c. above December 1950.

The downward movement continued throughout the first 10 months of 1952, the total index standing at 220.2 for October. Declines were recorded by most of the main commodity groups, although an upward trend was still apparent in iron and steel products and non-metallic mineral products. In the ensuing months of 1952 and through the first quarter of 1953, prices continued to decline fractionally as the composite wholesale index receded to 219.6 by April. Weakness continued to be felt most strongly in primary and secondary farm products and the lifting of the United States embargo on cattle on Mar. 2 did little to alleviate the decline. Lumber prices, too, were easier, particularly West Coast descriptions, while fibres, textiles and textile products receded slowly. Of the non-ferrous base metals, only

copper and its products registered a firmer tone in 1953 over 1952 levels. As in the previous year, prices for iron and its products continued to strengthen while non-metallic minerals and chemicals and allied products remained relatively steady.

1.—Annual Index Numbers of Wholesale Price Groups, 1943-52, and Monthly Indexes, 1952 and 1953

(1935-39=100)

Year and Month	General Wholesale	Raw and Partly Manufactured Goods	Fully and Chiefly Manufactured Goods	Industrial Materials	Canadian Farm Products ¹

¹ The wheat prices used in these indexes are prices currently effective for Manitoba Nos. 1, 2 and 3 Northern at Fort William. Participation payments are included and the series revised whenever such figures are announced. Between August 1945 and July 1950, the price included in the index for No. 1 Manitoba Northern was \$1.83 per bu. For the crop year Aug. 1, 1950-July 31, 1951, the price included was \$1.85 per bu. For the crop year Aug. 1, 1951-July 31, 1952, the price was \$1.83 per bu. The initial payment of \$1.40 per bu. for the crop year beginning Aug. 1, 1952, was increased to \$1.60 per bu. according to an announcement made Feb. 19, 1953. Commencing Aug. 1, 1949, western oats and barley were brought under control of the Canadian Wheat Board. Prices used for Canadian farm products since that time have been initial payments to farmers. Participation payments are included whenever they are announced. An increase in the initial payments for barley for the crop year 1952-53 was announced Feb. 19, 1953.

Residential Building Materials.—In March 1949, a series of index numbers of residential building material prices (basis: 1935-39=100) was established to meet the need for a more precise measurement of material components of residential construction. A description of the index together with a record back to 1926 is given in DBS bulletin, *Price Index Numbers of Residential Building Materials 1926 to 1948*.

The decline in residential building material prices that commenced in the final quarter of 1951 continued through 1952 and the first ten months of 1953. This change is illustrated by the composite index which, after touching a post-war peak of 290.8 in September and October 1951, subsequently dropped to 282.3 in February 1953. By June, a slight recovery to 284.1 had taken place, but the index dropped again to 280.4 in October. Among the various components, lower prices were most apparent in lumber products with other groups continuing to exert a firmer price tone.

2.—Annual Price Index Numbers of Residential Building Materials, 1943-52, and Monthly Indexes, 1952 and 1953

(1935-39=100)

Year and Month	Composite Index	Principal Components

Non-residential Building Materials.—A new index has been prepared to measure the price change of materials used in non-residential building construction. The index has been constructed on the base 1949=100, using weights obtained from

data on cost of building materials provided by general and trade contractors for a sample of buildings constructed in Canada during the years 1948-50. The methods of constructing the index are explained in DBS Reference Paper No. 43, *Non-Residential Building Materials Price Index, 1935-1952*. Price indexes for twelve principal component material groups have been calculated by months from January 1949; indexes for nine of these are given in Table 3 for 1952 and 1953.

The composite index of non-residential building materials increased from 112.6 in January 1951 to a peak of 124.8 in March 1953. Most of this increase of 12.2 points or 10.8 p.c. took place during 1951, the composite index increasing 9.7 points from January 1951 to December 1951 as compared with only 2.5 during the longer period December 1951 to March 1953. All component groups contributed to the increase during this period. At October 1953, the composite index and the indexes of all component groups except electrical equipment and materials were at or near previously established post-war record levels.

3.—Annual Price Index Numbers of Non-residential Building Materials, 1950-52, and Monthly Indexes, 1952 and 1953

(1949=100)

Year and Month	Composite Index	Principal Components

Section 2.—The Consumer Price Index

The Consumer Price Index is Canada's official measure of retail price change. It replaces the Cost-of-Living Index and is the fifth in a series of Canadian index numbers of retail prices dating back to 1900. This new measure was introduced by the Dominion Bureau of Statistics in October 1952 in a publication entitled, *The Consumer Price Index, January 1949—August 1952*. Detailed information on the main aspects of the Index are contained in that publication.

The purpose of the Consumer Price Index is to measure changes in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. The families covered by the Index lived in 27 Canadian cities of 30,000 population or over, ranged in size from two adults to two adults with four children and had annual incomes ranging from \$1,650 to \$4,050 during the survey year ended Aug. 31, 1948.

The budget of the Consumer Price Index represents the post-war level of consumption of those families. A list of 224 of the principal goods and services they purchased in the survey year forms the pricing sample of the Index, while the relative amounts they spent on those and similar categories of items determine the relative importance, or weight, given to each item in the Index.

The monthly index number is calculated from a sample of more than 50,000 retail price quotations. Prices are collected by field representatives in the 16 largest cities in Canada, while they are obtained by mail in 17 other cities having a population of 30,000 or over.

Changes observed in those prices are applied to the cost of the Index budget. The budget is often described as a market basket of goods and services. The physical content of this basket is kept constant from month to month and only changes in retail prices are allowed to influence its cost over time. A comparison between the current cost and the base-period cost of the same constant basket yields the Index, that is, a measure of the average percentage change in all retail

prices from the base period to date. For some of the food items entering into the basket, the quantities are allowed to vary as between months but not as between years, in order to take account of seasonal variations in consumption.

Since the Index refers to a post-war level of living it was fitting that a post-war year be selected as the reference level of prices. Of the post-war years, 1949 was the most suitable because price levels were relatively stable throughout that year. The fact that 1949 is a satisfactory reference level for other index number measurements, such as those related to industrial production, agriculture, imports and exports, was another important consideration.

The percentage distribution of the main group weights as of the base period is as follows:—

<i>Budget Group</i>	<i>1949 Base Weight</i>
Food.....	31.7
Clothing.....	11.5
Shelter.....	14.8
Household operation.....	17.3
Other commodities and services.....	24.7
TOTAL.....	100.0

Consumer Price Index and Prices of Staple Foods.—The Consumer Price Index rose steadily throughout 1951 from 107.7 for January of that year to a post-war peak of 118.2 for January 1952. During this period, all groups of the Index advanced, with foods showing the sharpest increase from 109.0 to 122.4. In 1952, the Index declined steadily until May, and remained fairly stable between that date and November 1952. Six consecutive declines followed, bringing the Index down from 116.1 in November 1952 to 114.4 in May 1953. Reversing its trend, the Index then moved up in a series of five increases to 116.7 by October, where it was only 1.5 points below the peak level of January 1952. The food index fell by 8.4 points during 1952, from 122.5 in December 1951 to 114.1 in December 1952. Further losses during the first five months of 1953 were offset by increases between June and October, leaving the index for October 1.4 points above the December 1952 figure. Shelter continued upward throughout 1952 and the first ten months of 1953, exceeding other group index levels from March 1952 on. Clothing, which reached its highest point in December 1951, declined throughout 1952 to stabilize at a level of 109.7 in the early months of 1953. Subsequent increases brought the index to 110.3 by October. The household operation index fluctuated narrowly between December 1951 and October 1953 showing a net gain of 1.1 points to 117.5 between these two dates. The other commodities and services series which moved between 115.5 and 116.6 throughout 1952, climbed to 116.7 early in 1953. A sharp drop in March and April, however, brought the index back to the December 1951 level of 115.0 but a subsequent rise of 0.9 points between May and October left the index at 116.0.

Table 6 provides single commodity price relatives on the base 1949=100 for a number of important foods entering into the food component of the Consumer Price Index. It also provides a record of average prices based on the actual average level of prices prevailing in October 1952 and calculated for the other months on the basis of the price relatives.

Consumer Price Indexes for Regional Cities.—Revised regional consumer price indexes were released by the Dominion Bureau of Statistics in November 1953 for nine cities or city combinations. The new series, which replace the cost-of-living indexes for eight regional cities, appear in Table 7. The index for St. John's, Nfld., which was prepared subsequent to the date Newfoundland joined Confederation, is calculated on the base June 1951=100 and is shown in Table 7 on that base.

The construction of each regional consumer price index involved three main phases: (1) the conversion of an existing cost-of-living index inclusive of all tobacco taxes, from the base August 1939=100 to the base 1949=100, up to and including Sept. 1, 1953; (2) the calculation of an entirely new index incorporating a revised weighting system and price sample, on the base Sept. 1, 1953=100; and (3) the linking of the new series to the converted series as at Sept. 1, 1953, to form a continuous index on the base 1949=100.

The regional indexes are not designed to show whether it costs more or less to live in one city than in another, and should not be used for that purpose. Their function is to measure percentage changes in retail prices over time in each city or city combination of a fixed basket of goods and services representing the level of consumption of a particular group of families.

7.—Consumer Price Indexes for Regional Cities, Annually 1940-52, and Monthly, 1952 and 1953

¹ Explanation of methods used in compiling St. John's, Nfld., index (June 1951=100) is given in DBS Reference Paper No. 28.

World Retail Price Indexes.—In order to place changes in Canadian retail prices in perspective with those occurring in other countries, Table 8 provides retail price indexes for selected countries and dates. It will be noted that increases in retail prices have been world-wide. These indexes also measure price change only and should not be used to compare living costs from country to country.

Section 3.—Index Numbers of Security Prices

Security prices have long been utilized in statistical measurements related to economic phenomena and are generally sensitive to changing business conditions although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus, in 1928 and 1929 common-stock prices advanced far beyond levels indicated by business profits and prospects. Security-price trends also have been at variance with other business indexes during World Wars I and II.

Common Stocks. — Common-stock prices were firmer in the final quarter of 1952 but the trend was reversed in the opening months of 1953. Changes in security price levels in 1953 reflected, in part, prospects for peace in Korea together with a less tense international situation. From a 1952 low point of 163.6 for October, the investors composite index advanced to 172.3 by January 1953. Following relative steadiness in February and March, the index dropped sharply in April to touch 160.8. Continued steadiness was maintained at this level until September and October when a further sharp drop to 152.9 and 151.9, respectively, occurred.

Preferred Stocks.—Preferred stock prices remained within exceptionally narrow limits during the final quarter of 1952 and the first two months of 1953. From a level of 161.2 in October, the index for preferred stocks moved to 161.6 by February 1953. A firmer tone lifted prices to 163.6 in March but by April this advance had been cancelled as the index again stood at 161.6. Subsequent to that date prices held relatively steady, standing at 161.0 for October.

10.—Index Numbers of Preferred Stocks, by Month, 1944-53

(1935-39=100)

NOTE.—Figures for 1927-43 are given in the 1948-49 Year Book, p. 658.

Mining Stocks.—Prices for mining stocks, after touching a 1952 low point of 99.1 in October, advanced slowly through the final quarter of 1952. In January 1953 a peak of 106.0 was reached which subsequently proved to be the turning point for a decline that lowered the index to 82.7 by October. Both golds and base metals shared in the recession but the latter group suffered the greater losses. After reaching a peak of 180.6 in January, as compared with 166.9 in October 1952, the base metals index receded to 134.3 by October. Over the same period, the gold stocks series moved between 69.5 for October, 73.5 for January, and 60.1 for October.

Section 4.—Index Numbers of Bond Yields

The exceptional financial requirements of the war years 1914-18 turned the federal authorities to the domestic market, a field that had hitherto served mainly the needs of the provinces and municipalities. Historical records of long-term bond yields in the domestic market prior to 1914 are obtainable, therefore, from provincial and municipal sources only.

The growing importance of Federal Government financing in the domestic market since World War I made it advisable to publish the Government's index of long-term bond yields shown in Table 12. This series (1935-39=100) has been prepared from January 1937 on the basis of yields computed from a 15-year, 3 p.c. theoretical issue. Quotations for the theoretical yields are computed by the Bank of Canada.

The easier tone for Government of Canada obligations, which developed in the second half of 1951, continued through 1952 and into 1953. There was, however, evidence of a more stable price in the first part of 1953 as indicated by the long-term bond yield index which hovered around 119.0 in the first quarter and reached 120.8 by October.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Combined Statistics of Public Finance for all Governments

Combined statistics of public finance for all governments in Canada—federal, provincial and municipal—are presented in this Section. Additional information is provided for each level of government in Sections 2, 3 and 4.

Combined Revenue and Expenditure.—Tables 1 and 3 give details of the federal, provincial and municipal net combined revenue by sources and net combined current and capital expenditure by services for 1950. This net basis has been prepared by deducting from revenue, and the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, certain other sales of commodities and services, and interest, premium, discount and exchange revenue, exclusive of sinking fund earnings. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-governmental transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and, therefore, cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 3 in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-governmental transfers in the two tables.

* Except as otherwise noted, this Chapter has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

Totals, Expenditure (excluding Inter-governmental Transfers).....	2,842,488	3,120,614	3,503,622	4,100,617

¹ Includes provincial and municipal expenditure of Newfoundland.

Combined Debt.—It should be noted that the increased direct and indirect debt reflected in 1949 is partially attributable to the inclusion for the first time of debt of the provincial and municipal governments of Newfoundland amounting to slightly less than \$13,300,000. Debt of each level of government may be ascertained for 1950 by reference to Table 6.

5.—Combined Debt of All Governments, 1947-50

¹ The debt of municipalities in the Province of Quebec is estimated.² Includes \$200,000,000 deposit certificates and \$750,000,000 six-month treasury notes.³ Excludes provincial debt accounts.⁴ Includes both guaranteed and unguaranteed issues of the Canadian National Railways as at Mar. 31 to correspond with fiscal year end of the Federal Government.⁵ Includes proceeds from sale of mortgaged properties held by the Canadian National Railways.⁶ Excludes contingent liability in respect of Federal Government guarantee of deposits maintained by chartered banks in the Bank of Canada, miscellaneous guarantees the amounts of which were not finally determined or were indeterminate at the close of the fiscal year, and contingent liabilities of the Canadian National Railways.

Section 2.—Federal Public Finance*

A sketch of public finance from the French régime to the outbreak of World War I appears in the 1941 Year Book, pp. 742-743. Detailed sketches *re* tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945, is given in the 1945 Year Book, pp. 918-923. Budgets for the years ended Mar. 31, 1946-51, will be found in issues of the Year Book beginning with the 1946 edition. The most important post-war Budget changes, up to and including the 1952-53 Budget, are summarized in the 1952-53 Year Book, pp. 1026-1030.

Post-War Financial Policy.—The post-war financial policies of the Federal Government can be evaluated only against the background of Canada's economic situation. The position at the end of World War II can be summarized in the following manner. The War had cost almost \$20,000,000,000. Net national

* Revised, except as otherwise stated, under the direction of Dr. K. W. Taylor, C.B.E., Deputy Minister of Finance, Ottawa.

debt had increased from \$3,200,000,000 pre-war to \$13,400,000,000 at Mar. 31, 1946. In industry there was extensive war capacity that had to be converted to peace-time manufacture. The wartime labour force and the members of the Armed Services had to be fitted into a peace-time economy. The multilateral system of trade and payments had broken down and traditional Canadian export markets in Western Europe had been greatly weakened by the War.

Despite these factors, the Canadian economy began to expand in 1946. The rapid but balanced growth in the years immediately after the end of the War appears to be due broadly to five factors, which were, of course, closely related and which reacted upon each other. First, the wartime expansion of Canadian manufacturing capacity revealed that, at an optimum scale of production, Canada could produce many complex goods as cheaply and efficiently as any other nation. This encouraged the rapid conversion of capacity to peace-time use as well as investment in new capacity. Second, the size of the Canadian war effort created confidence among Canadians as to the possibilities of the Canadian economy. This increased confidence was evident in the willingness of Canadians to work, save and invest in Canada. Third, Canada's population expanded rapidly in the post-war period, enlarging the domestic market for many goods and services. The expansion of population was the result of increased immigration (which in turn was made possible by economic expansion), of substantial acceleration in the rate of natural increase and of the union of Newfoundland with Canada. A fourth factor behind the post-war expansion of the Canadian economy has been the success of the search for new minerals and metals. The Quebec-Labrador iron-ore discoveries and the new oil and gas fields in Alberta and Saskatchewan are the most obvious and important examples. These four factors have all affected the fifth factor—the high level of investment. Since 1946, a steadily increasing percentage of Canada's gross national product has been invested; in 1946 the proportion was 14.2 p.c. and in 1952, 22.3 p.c. From 1946 to 1952, capital investment has totalled almost \$30,000,000,000 and has accounted for the employment of about 15 p.c. of the labour force. Since 1948, capital investment has exceeded exports as a mainspring of Canadian economic activity and it is worth noting that, since the end of the War, savings in Canada have been sufficient to finance the investment program. While there has been significant investment in Canada coming from abroad, notably from the United States, Canadian net investment in other countries since 1946 has been of similar magnitude. In 1952, for example, Canada was a net creditor in international investment despite the substantial flow of United States investment funds into Canada.

It was with these developments in mind that the Federal Government established its financial policies. At the end of the War there appeared to be four objectives of financial policy: (1) to smooth the change from war to peace; (2) to restore and maintain a free enterprise economy; (3) to promote a high and rising level of employment and income; and (4) to prevent excessive inflation. In the years 1950-52, the task of controlling inflation became even more important as heavy defence requirements were superimposed on an economy already stretched by a heavy investment program.

These four general aims were pursued, not by direct controls, but by fostering the right climate, by offering appropriate incentives and by steering the economy in the desired direction. As World War II drew to an end, a series of measures were enacted to smooth the adjustment to peace-time activity and to give driving power

to the dynamic Canadian economy. These measures included the establishment of the Industrial Development Bank, the enactment of the Farm Improvement Loans Act and the establishment of the Central Mortgage and Housing Corporation and the Export Credits Insurance Corporation. In addition to establishing the latter Corporation, Parliament gave the Minister of Finance authority to grant export credits to other countries. A \$1,250,000,000 loan to the United Kingdom was the largest of such export credits.

In the annual Budget speeches of the Minister of Finance will be found his diagnoses of the economic situation and his prescriptions of policy. For the first three post-war years the Budget speeches show him balancing several competing factors: first was the belief that the high wartime taxes reduced incentive to work and to invest; second was the belief that in periods of prosperity the national debt should be reduced; and third was the idea that a Budget surplus would help offset the inflationary forces of the post-war economy.

In the first three post-war Budgets, tax rates were reduced but substantial surpluses were achieved. In the Budget of 1949 a very small surplus, little better than a balance, was planned and the program of tax reduction to peace-time levels was completed. The main features of the 1949 Budget were a drastic recasting of commodity taxes and the beginning of a program to eliminate the double taxation of business profits, believed to be one cause of the relative shortage of equity capital.

By the end of 1948, a stable economic condition had been reached and during the following year and a half there was relatively little change in prices and inflation was well under control. This period of normal conditions was interrupted by the outbreak of the Korean war in June 1950. The defence program then adopted required expenditures that were to rise to four or five times their previous size. The economy was already strained by the capital investment program and by a high level of consumer spending.

Following the outbreak of the Korean conflict the size of the defence program made it necessary for the Federal Government to assess priorities, to limit competing demands, and to assure that there were adequate resources for the most important national needs. There were two main methods available for this task: comprehensive direct controls and general fiscal and monetary policies, which operate indirectly. Direct controls were judged to be burdensome to administer, needlessly restrictive of individual freedom and quite unsuited to a long-time effort.

The Federal Budgets after June 1950 reflected the decision to use general fiscal and monetary methods. Budgets were designed to pay for the defence program without borrowing and to use the necessary tax increases to control inflation where possible. Taxes on personal and corporate income were increased by 20 p.c. About half the new revenue required came from increased sales taxes and excise taxes. The Minister of Finance took the view that these affected the incentive to produce less adversely than would further increases in the taxes on income.

Though successive Budgets during the Korean conflict were designed to produce only a little better than a balance, rising national production and the lag in defence production produced moderate surpluses in 1950-51 and in 1951-52.

Monetary policies supplemented Budget policy. In October 1950, the Bank of Canada raised its discount rate from $1\frac{1}{2}$ to 2 p.c. Interest rates on long-term bonds rose from 2.7 p.c. pre-Korea to 3.2 p.c. in March 1951 and, by the end of 1952, to 3.7 p.c. Consumer credit was restrained by regulations in November

1950 and March 1951. (These regulations were withdrawn in May 1952.) In February 1951 the chartered banks agreed to adopt lending policies that would prevent any increase in the total of bank loans and investments; and in September 1950 the Canadian dollar was 'unpegged'. The rise in its value tended to reduce the cost of imports and the internal price of exports.

The 1953-54 Budget.—The Budget for 1953-54 was opened by the Minister of Finance on Feb. 19, 1953, and a number of tax changes were proposed.

In the 1952-53 Budget the device of a defence surcharge on personal income tax had been dropped. About two-thirds of the surcharge rate was incorporated in the new schedule of rates and the remaining third was abandoned, thus achieving an effective reduction in personal income tax. In the February 1953 Budget, the remaining two-thirds of what had once been a surcharge was dropped so that personal income tax returned to its pre-Korean level. This reduction took effect from July 1, 1953.

The tax on corporate income was reduced by increasing from \$10,000 to \$20,000 the amount of profits subject to the rate of 20 p.c. The standard rate of 50 p.c. applied previously to all profits over \$10,000 was reduced to 47 p.c. and applied to all profits over \$20,000. It was estimated that after these changes only 30 p.c. of corporate taxpayers would be paying the standard 47-p.c. rate. Also, the low rate of 20 p.c. to be applied to the first \$20,000 of profits was reduced to 18 p.c. In addition to the 18-p.c. and 47-p.c. rates there was, of course, the 2-p.c. old age security tax.

In addition to these rate reductions on personal and corporate income taxes, there was an increase in the amount of credit against personal income tax for dividends received from Canadian tax-paying corporations. The 10-p.c. credit provided in 1949 was increased to 20 p.c. in the February 1953 Budget, constituting a further attempt to reduce the element of double taxation of corporate income and to encourage Canadians to invest in the equities of Canadian companies.

The income-tax deduction for medical expenses, which allowed medical expenses in excess of 4 p.c. of income to be set against taxable income, was made more generous; the 1953-54 Budget provided that medical expenses in excess of 3 p.c. of income could be deducted from taxable income.

Other important changes made in the income-tax system included: the allowance of a deduction for dependent children over 21 years of age attending university; an increase of from \$600 to \$750 in the amount of income that a dependent might earn in a year; provision for deduction of expense allowances for municipal officials for income-tax purposes if they conform with the limits established for allowances for federal and provincial elected members; special provision to alleviate the tax on refunds paid out as a result of reorganizations of pension plans.

Following the post-war practice of withdrawing from minor tax fields that had been used by the provinces, the 1953-54 Budget proposed the repeal of the federal tax on the transfer of securities.

The Budget resolutions proposed reductions on the duty on certain items entering into costs of production, particularly on gasoline engines and wire rope of importance to the fishing industry, and on certain specialized items of equipment for the mining industry. The classifications under which universities, schools and hospitals can import scientific and medical apparatus and under which items for religious use are brought into the country free of duty were further widened.

In the field of commodity taxes, while there was no change in the rate of general sales tax or the special excise rate, there were a number of specific revisions. The excise duty on cigarettes was reduced by \$2 a thousand, or by 4 cents for a package of 20 cigarettes. The stamp tax on cheques, money orders and other instruments was abandoned. The sales tax on books and on material used in books, magazines and newspapers was dropped. Certain materials used in the manufacture of sales-tax-free goods were also freed from sales tax.

The radio licence fee was abandoned and in its place the Canadian Broadcasting Corporation was given the revenue from the existing special excise tax of 15 p.c. on radio sets, on television sets and on their taxable parts.

All the tax changes together involved a reduction in revenue of \$361,000,000 in a full fiscal year and of \$237,000,000 in the year ended Mar. 31, 1954. The personal income-tax changes involved a reduction in taxes of \$185,000,000 in a full year and \$100,000,000 in the fiscal year 1953-54.

Prospective budgetary expenditure for 1953-54 was estimated at \$4,462,000,000 and prospective budgetary revenue at \$4,473,000,000, thus providing a surplus of \$11,000,000, or less than 0.25 p.c. of the revenue. Finally audited figures for the year ended Mar. 31, 1953, showed total budgetary revenues of \$4,361,000,000 and expenditures of \$4,337,000,000, leaving a surplus of \$24,000,000 or 0.5 p.c. of revenue.

Subsection 1.—Balance Sheets of the Federal Government

Table 7 shows the balance sheets of the Federal Government as at Mar. 31, 1952 and Mar. 31, 1953. The figures of this table are on a basis not strictly comparable to those in previous Year Books, chiefly because of changes in the method of accounting for cash.

Subsection 2.—Revenue and Expenditure

In the fiscal year ended Mar. 31, 1953, Federal Government revenue amounted to \$4,361,000,000 compared with \$3,981,000,000 in the previous year, an increase of \$380,000,000. During the same period, expenditure increased by \$604,000,000 from \$3,733,000,000 to \$4,337,000,000. The surplus of revenue over expenditure for the fiscal year was \$24,000,000.

Tax revenue was \$340,000,000 greater than in the previous fiscal year and non-tax revenue dropped \$2,000,000. Special receipts and other credits increased by \$42,000,000.

Subsection 3.—Analysis of Revenue from Taxation

Table 13 gives a comparison of total expenditure with taxation revenue and total revenue for each of the fiscal years ended Mar. 31 since 1947. During the war years expenditure far exceeded revenue but in 1947 taxation met over 92 p.c. of expenditure and revenue from all sources exceeded expenditure. For 1948 and 1949, revenue from taxation alone exceeded total expenditure by a substantial amount owing to the maintenance of high taxation levels and a greatly increased national income.

**13.—Relationship of Total Expenditure to Taxation Revenue and to Total Revenue,
Years Ended Mar. 31, 1947-53**

NOTE.—Figures for 1940-46 are given in the 1951 Year Book, p. 989.

Year	Total Expenditure	Taxation Revenue	Total Revenue	Percentage to Total Expenditure of—	
				Taxation Revenue	All Revenue
	\$	\$	\$	p.c.	p.c.

The revenue from customs and excise duties, the two most important sources prior to World War I, amounted in 1953 to 16 p.c. of the revenue derived from taxation while income tax accounted for 62 p.c. of the taxation revenue.

The following analysis of taxation revenue is confined to excise duties, excise taxes, income tax and succession duties; customs receipts constitute a single item in the *Public Accounts* and cannot be further analysed here.

Excise Duties

Excise duties proper are presented below with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of excisable goods taken out of bond.

Canadian Excise Tariff.—The following is a statement of the Canadian excise tariff, as at Feb. 20, 1953:—

Spirits.....	per proof gal.	\$12-00	Canadian brandy.....	per proof gal.	\$10-00
Spirits used by licensed bonded manufacturers.....	per proof gal.	1-50			
Spirits used in bond for manufacture of perfume.....	per proof gal.	Free	Malt, all, when brought into a brewery.....	per lb.	0-21
Spirits used in bond for manufacture approved chemical compositions.....	per proof gal.	0-15	Malt liquor or beer, when brewed in whole or in part from any substance other than malt.....	per Imp. gal.	0-42
Spirits sold to druggists licensed under the Excise Act to be used exclusively in preparation of prescriptions for medicines and pharmaceutical preparations.....	per proof gal.	1-50	Tobacco, manufactured, all descriptions except cigarettes	per lb.	0-35
Spirits distilled from wine produced from native fruits, and used in any bonded manufactory for the treatment of domestic wine.....	per proof gal.	Free	Cigarettes, weighing not more than two and one-half pounds	per M.	4-00
			Cigarettes, weighing more than two and one-half pounds.....	per M.	5-00
Spirits imported and taken into a bonded manufactory (in addition to duties otherwise imposed).....	per proof gal.	0-30	Cigars, all.....	per M.	1-00
Spirits used directly in the manufacture of toilet preparations or cosmetics on which excise tax is applicable under Schedule I of the Excise Tax Act.....	per proof gal.	Free	Raw leaf tobacco, imported, now dutiable under the customs tariff only.		
			Canadian raw leaf tobacco, when sold for consumption..	per lb.	0-20

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, bona fide public hospitals, or health institutions in receipt of Federal Government aid.

Revenue from Excise Duties.—In the year ended Mar. 31, 1953, tobacco and cigarettes supplied about 46 p.c. of the revenue from excise duties.

14.—Gross Excise Duties Collected, Years Ended Mar. 31, 1948-53

Item	1948	1949	1950	1951	1952	1953
	\$	\$	\$	\$	\$	\$

Beer or malt liquor.....	3,819,875	3,740,065	3,678,316	2,745,851	3,812,065	5,294,283
Malt syrup.....	67,878	51,825	—	—	—	—
Malt.....	53,625,293	55,853,055	56,018,292	65,409,427	73,748,003	80,584,283
Tobacco and cigarettes.....	101,900,638	106,033,181	115,778,732	114,282,662	100,547,951	116,701,207
Cigars.....	215,479	207,823	203,043	203,945	162,968	212,817
Licences.....	37,468	39,115	38,241	38,009	36,092	38,183
Totals¹.....	199,828,603	207,385,132	223,054,798	243,914,446	225,475,736	252,205,615

¹ These totals do not agree with net excise duties as shown in Table 8 owing to refunds and drawbacks and, in the case of spirits, a transfer tax which is included here.

Statistics of Licences and Distillation.—Secondary to the collection of excise duties, statistics are compiled of excise licences issued and of distillation.

15.—Statistics of Licences and Distillation, Years Ended Mar. 31, 1948-53

Item	1948	1949	1950	1951	1952	1953

Proof spirits manufactured.....proof gal.	28,198,327	23,643,036	20,741,268	23,551,259	24,742,386	22,517,166

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from a low of 2,356,329 proof gal. in that year to a high of 35,555,059 proof gal. recorded in 1945.

Alcohol and Tobacco Taken Out of Bond.—The amounts of beverage spirits, malt beer, malt, cigars, cigarettes and other tobacco taken out of bond for consumption are given in Table 16, p. 927.

Excise Taxes Collected

The statistics given in Table 16 represent gross excise tax collections by the Excise Division of the Department of National Revenue; these differ from the figures shown in Table 10 (in the column "Sales and Other Excise Taxes"), which represent net revenue received, by the amounts of the refunds shown in footnote 1 and the amounts of the 2-p.c. sales tax credited to the Old Age Security Fund shown in footnote 2 to Table 16.

Income Tax*

The income tax was instituted in 1917 as a part of war-tax revenue. Before the outbreak of World War II, it had become a permanent and important part of the taxation structure and the chief source of raising ordinary revenue. In many respects, it is an ideal form of direct taxation and the experience and machinery for the collection of this tax has been built up over a period of years.

* More detailed information is given in the annual report *Taxation Statistics*, published by the Taxation Division, Department of National Revenue, Ottawa.

Income-tax rates were increased to help finance World War II, and a compulsory savings feature was adopted with respect to individuals and to corporations. A refundable portion of approximately \$295,000,000 was collected from individuals under the personal income tax during the war years and approximately \$220,000,000 from individuals and corporations under the excess profits tax. Repayment of the refundable portion of personal income tax was completed in 1949 and the refundable portion of excess profits tax was repaid by March 1952.

Since the end of the War, the weight of individual income tax was reduced each year up to and including 1949 and higher exemption allowances were given. However, the expansion of personal incomes and the growth of the labour force offset to a considerable extent the effect on revenue of the reduction in rates. Following the outbreak of war in Korea in 1950, rising defence costs led to an increase in the rates of personal income tax. A defence surtax of 20 p.c. was introduced in 1951 but this applied only at the rate of 10 p.c. to 1951 incomes. The Budget of 1952 announced a new schedule of rates which incorporated approximately two-thirds of the 20-p.c. defence surtax. The average of this schedule and the rates introduced in 1951 comprised the rates of tax on 1952 incomes. The Budget Speech of 1953 announced the elimination of the remaining portion of the 20-p.c. defence surtax. This meant a reversion to the schedule in force in 1949 and 1950. The average of this schedule and the rates of tax introduced in 1952 made up the rates applicable to 1953 incomes.

Taxes on corporation incomes were reduced following the end of World War II. Excess profits tax rates were also reduced and finally ceased to apply after Jan. 1, 1948. Concurrently with the ending of the excess profits tax, corporation income-tax rates were raised from 18 p.c. to 30 p.c.

To help small businesses, the tax rate on the first \$10,000 of profits was reduced to 10 p.c. in 1949 but, at the same time, the rate on profits in excess of \$10,000 was increased to 33 p.c. In the following years it became necessary to increase sharply the rates of tax on corporation profits and by 1953 they had become 20 p.c. on the first \$10,000 of profits plus 50 p.c. on amounts in excess thereof, with a credit against the tax equal to 5 p.c. of the profits earned in provinces that continued to levy a corporation income tax. The Budget for 1953-54 brought a reduction in the rates of corporation income tax to 18 p.c. on the first \$20,000 of profits, plus 47 p.c. on the remainder, with a credit against the tax equal to 7 p.c. of the profits earned in Quebec, the only province continuing to levy a corporation income tax.

Details of income-tax changes in the Budgets of 1945-46, 1946-47, 1947-48 and 1948-49 are given at pp. 1008-1009 of the 1948-49 Year Book. Details of the tax changes in the 1949-50 Budget are given at p. 1002 of the 1950 Year Book. The change made in income-tax rates in the 1950-51 Budget concerned corporation taxes only and is given at p. 979 of the 1951 Year Book. Income-tax changes made in the 1951-52 and 1952-53 Budgets are given at pp. 1029-1030 of the 1952-53 Year Book and the 1953-54 Budget changes are discussed in detail at pp. 1064-1065 of this volume.

The tax on dividends and interest and on rents and royalties is levied at the rate of 15 p.c. on payments going to non-residents of Canada. The payments subject to tax include income from an estate or trust, alimony payments, rents from real property, and rents, royalties or similar payments for the use in Canada of property, trade names or inventions. There is no non-resident tax on interest from Government of Canada bonds or bonds guaranteed by the Government

of Canada or where the interest is payable in other than Canadian currency. Where the payments are for interest from bonds of, or guaranteed by, a province of Canada or are dividends paid by a wholly owned subsidiary to its parent company outside Canada, the rate of tax is only 5 p.c.

The gift tax is imposed at the rate of 10 p.c. on gifts of up to \$5,000 and at rates varying from 11 p.c. to 28 p.c. on gifts from \$5,000 to \$1,000,000 or over.

Income-tax revenue in Table 17 is as shown in the *Public Accounts* and represents collections made by the Taxation Division of the Department of National Revenue under the authority of the Income War Tax Act (R.S.C. 1952, c. 148).

17.—Collections under the Income Tax Act, Years Ended Mar. 31, 1946-53

NOTE.—Figures for 1919-34 are given in the 1947 Year Book, p. 966, and for 1935-45 in the 1951 edition, p. 993.

¹ Includes estimated refundable portion.

² Includes deferred tax, \$1,308,982.

³ Includes

deferred tax, \$1,002,027, and tax on private companies, \$41,972,700.

⁴ Includes deferred tax, \$685,967,

and tax on private companies, \$12,596,108. ⁵ Includes deferred tax, \$778,617, and tax on private companies, \$3,440,514.

⁶ Includes deferred tax, \$629,029, and tax on private companies, \$1,120,510.

⁷ Includes deferred tax, \$548,007, and tax on private companies, \$87,619,776.

⁸ Excludes Old Age Security tax. ⁹ Includes tax of \$14,612,872 on undistributed income of companies.

Tax Collections by the Department of National Revenue on a Fiscal-Year Basis.—Statistics of income-tax collections are gathered at the time the payments are made and, therefore, have the value of being very up-to-date. Their timeliness has been enhanced within the past few years by the adoption of the "pay-as-you-go" system. Under this system most of the tax is collected during the year in which the income, on which the tax is based, is earned. On the average this is about ten months prior to the actual filing of an income-tax return by the taxpayer. The payments on behalf of most taxpayers, however, are made by their employers and a cheque from one employer may cover the tax payments of hundreds of employees. At this stage, therefore, it is not possible to link the moneys received to the individuals who are, in the final analysis, contributing the tax. Collection statistics, for this reason, are not capable of being closely related to the persons who are being taxed and any statistical tables that attempt to describe the taxpayer by occupation or income class must be based on the income-tax returns that are filed by the taxpayers many months after the payment of tax. However, collection statistics, if interpreted along with the tax rate, do serve the purpose of indicating the general trend of income upon which tax is levied well in advance of the final compilation of assessment data.

The statistics given in Table 18 pertain to tax collections under the Income Tax Act administered by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

18.—Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1946-53

NOTE.—Figures for 1917-34 are given in the 1947 Year Book, pp. 999-1000, and for 1935-45 in the 1951 edition, p. 994.

Corporation Income-Tax Statistics.—Corporation statistics are presented in Tables 21 and 22 on a taxation-year basis prior to assessment. The data have been extracted and compiled from the returns shortly after they have been filed and

are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec because many large companies operating across Canada file their returns in one or other of these two Provinces.

Succession Duties

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. Legislation was passed in the other provinces in the following years: Manitoba, 1893; Prince Edward Island and British Columbia, 1894; Saskatchewan and Alberta, 1905. The Federal Government first imposed succession duties in 1941. Current legislation is the Dominion Succession Duty Act (R.S.C. 1952, c. 89).

Table 23 shows the receipts of the various governments from this source from 1948.

In 1947, seven provinces—Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia—withdrew from the succession-duty field. The seven provinces entered into agreements with the Federal Government to 'rent out' the succession-duty field for the period Apr. 1, 1947, to Mar. 31, 1952. Accordingly, in these provinces, the previous combination of federal and provincial succession duties was replaced by a single federal succession duty at double the previous federal level which, in most cases, resulted in a combined duty approximately the same as previously levied under the separate federal and provincial duties. On the other hand, the Provinces of Quebec and Ontario did not enter into the agreements but the doubled rates of federal duty were applied and were capable of being reduced up to one-half by a credit for the duty paid to these Provinces. The Yukon Territory in 1948, and the Province of Newfoundland in 1949, entered into a similar tax-rental agreement.

In 1952, the tax-rental agreements expired but new five-year agreements were negotiated with the same eight provinces which again elected not to cultivate the succession-duty field. The Province of Ontario also entered into an agreement on income tax, but elected to continue to cultivate the succession-duty field. Consequently, in all the provinces of Canada the situation in regard to succession duty is likely to be the same as that described above until Mar. 31, 1957.

¹ Under terms of the 1947 and 1952 Dominion-Provincial Taxation Agreements, all provinces except Ontario and Quebec refrain from levying succession duties; amounts shown are arrears. ² Arrears of pre-union death duties cannot be shown. ³ Fiscal year ended Nov. 30 of preceding calendar year.

⁴ Sixteen months.

⁵ Fiscal year ended Oct. 31 of preceding calendar year.

⁶ Seventeen months.

Double taxation of estates resulting from taxation of the same property by more than one Canadian jurisdiction has been common in the past, but the withdrawal of eight of the provinces from the field, an interprovincial agreement between Ontario and Quebec, and the credit provision of the federal legislation have reduced this problem considerably. In the international field, dual taxation has been dealt with by way of tax conventions. A tax convention between Canada and the United States was signed on June 8, 1944, and amended effective Nov. 21, 1951. An agreement respecting succession duties was signed June 5, 1946, between Canada and the United Kingdom. A convention between Canada and France, signed on Mar. 16, 1951, came into effect on July 2, 1953.

The difficulties of working out succession-duty tables to show the combined effects of federal and provincial duties are readily realized. The best that can be done here is to choose typical estates in the main classes laid down in the legislation and give examples of the combined duties applicable in such cases. This has been attempted in the following series of tables in the hope that it will be useful in presenting a general picture of the incidence of succession duties in Canada under conditions existing at present.

Federal Duty.—Beneficiaries are divided into four classes, as follows:—

- (1) Widow or dependent child or dependent grandchild.
- (2) Husband; parent; grandparent; child over 18 years of age, not infirm; son- or daughter-in-law.
- (3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
- (4) Others.

No duty is payable on estates not exceeding \$50,000, or on bequests of up to \$1,000 to any one individual, nor is duty levied on gifts to the Federal Government or provinces, on residential property of certain diplomatic or consular officials, on pensions administered by the Canadian Pensions Commission or those payable by allied nations for war services, nor on insurance moneys or annuities if the person with whom the contract was made was domiciled outside Canada at the time of death. Provision is made for increased exemptions and reduced duties in the case of those dying as a result of war service. Bequests to non-profit charitable organizations in Canada are exempt.

Widows are exempt up to \$20,000, dependent children to \$5,000 each and, in cases where dependent children do not benefit, the widow's exemption is increased by \$5,000 for each child who does not benefit. In the case of dependent orphaned children, there is a further exemption of \$15,000 (in addition to \$5,000) divisible proportionately among such orphans according to their number and the value of each individual benefit. Duty is payable on the excess only when the limit is passed, i.e., these exemptions are deductible exemptions.

Gifts made during the lifetime of the deceased are exempt if the transfer was carried out more than three years prior to his death and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased) thereafter did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

Examples of the rates of duty and duty levied are given in Table 24.

24.—The Incidence of Succession Duties in all Provinces (except Quebec and Ontario) on Typical Estates

Class	Aggregate Net Value	Dutiable Value	Rate	Duty
	\$	\$	p. c.	\$

	1,000,000	1,000,000	44·7	447,000

The Incidence of Combined Federal and Provincial Succession Duties.—

Only the Provinces of Quebec and Ontario have retained their own succession duties. In Tables 25 and 26 for all classes of beneficiaries, the duties collectable are shown for the case where an estate of given value is left to one beneficiary only. It would be impossible to cover the many different combinations of the various beneficiaries and the exemptions and saving clauses to be found in the legislation of the respective provinces. In every case, the estate is assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir.

Quebec.—The current legislation under which succession duties are collected is S.Q. 1943, c. 18, as amended. As stated above, the following text and table can give only a broad outline of such duties as applied to comparable classes of beneficiaries in other provinces. Full details regarding other cases may be obtained from the Act or from the Collector of Succession Duties, Provincial Revenue Offices, Quebec, Que.

Under the legislation, beneficiaries are divided into three classes, as follows:—

- (1) Those in direct ascending or descending line, of a relationship between consorts, between father- or mother-in-law and son- or daughter-in-law, or between step-father or step-mother and step-son or step-daughter. There is no limitation of degree in the direct ascending or descending line in these relationships.
- (2) Those in collateral line including a brother or sister, or descendant of a brother or sister of the deceased, or to a brother or sister, or son or daughter of a brother or sister, of the father or mother of the deceased.
- (3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed \$10,000; in an estate, the aggregate value of which does not exceed \$50,000, this sum is increased by \$1,500 for each child, in the first degree,

under 25 years of age, domiciled in the Province, left by and surviving the deceased (15-16 Geo. VI, c. 14). If the whole value of the estate is less than \$1,000, bequests to collateral relatives are exempt. No duty is payable on bequests of up to \$1,000 to beneficiaries in Class (3) who have been in the employ of the testator for five years or more. In estates that devolved prior to Mar. 10, 1949, no duty is payable on legacies for religious, charitable or educational purposes in Quebec and the same privilege is extended to legacies for similar work outside that Province, provided that the province or State within which the work is to be carried out extends reciprocal privileges under its succession duty laws. Since Mar. 10, 1949 (13 Geo. VI, c. 32), all legacies, gifts and subscriptions for religious, charitable and educational purposes are tax-free, regardless of the country, province or state where the institutions benefiting therefrom are located.

¹ The rates of federal duty shown are those actually applied but a credit may be made to the taxpayer up to one-half of this amount on account of duty paid to the Province, *see* p. 1080. ² After deduction of credit on federal duty.

Ontario.—The current legislation on succession duties is R.S.O. 1950, c. 378, as amended. Full information may be obtained on application to the Succession Duty Office, Treasury Department, Parliament Buildings, Toronto, Ont.

Beneficiaries are divided into three classes, as follows:—

- (1) Widow; child; husband; parent; grandparent; grandchild; son- or daughter-in-law.
- (2) Brother; sister; nephew; niece; uncle; aunt; cousin; child of nephew or niece.
- (3) Others.

No duty is payable on estates not exceeding \$5,000 in aggregate value, nor on estates not exceeding \$50,000 devised to persons in Class (1), nor on those not exceeding \$10,000 devised to persons in Class (2).

Where any person in Class (3) was in the employ of the deceased for at least five years immediately prior to his death, no duty is payable with respect to any benefits which such person derived from the deceased where the total value of such benefits is not in excess of \$1,000. Such benefits, while exempt are, nevertheless, taken as a factor in fixing the rates applicable to the dutiable portions of the estate.

Bequests for religious or educational purposes to any religious or educational organization which carries on its work solely in Canada, and bequests for charitable purposes to any charitable organization which carries on its work solely in Ontario, are exempt from duty and are ignored altogether in the computation of duty on the portions of the estate that are not exempt. The same rule applies to bequests to the Canadian National Institute for the Blind, the Canadian Red Cross Society and other approved patriotic organizations.

of credit on federal duty but inclusive of surtax on provincial duty.

³ Includes a surtax of 15 p.c.

⁴ Includes a surtax of 20 p.c.

⁵ Includes a surtax of 25 p.c.

Subsection 4.—Subsidies and Taxation Agreements with the Provinces

Subsidies.—By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Federal Government makes certain annual payments to the provinces.

Interest on Debt Allowance.—By the terms of the union of the provinces at Confederation in 1867, the Federal Government assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and Quebec, interest at 5 p.c. per annum on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately \$25 per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculating the debt allowances of provinces; moreover, the Federal Government pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment by the Federal Government to the provinces in respect of interest on debt allowances is \$1,609,386.

Allowances for Governments and Legislatures.—Under the terms of the union, annual specific grants were made to the various provinces toward the support of their governments and legislatures. These amounts vary with the population of the provinces, according to the following scale approved in 1907:—

Where population is—	\$
Under 150,000.....	100,000
150,000, but does not exceed 200,000.....	150,000
200,000, “ “ 400,000.....	180,000
400,000, “ “ 800,000.....	190,000
800,000, “ “ 1,500,000.....	220,000
Over 1,500,000.....	240,000

Aggregate annual allowances presently paid under this head amount to \$1,990,000, including the \$180,000 that became payable to Newfoundland upon union with Canada in 1949.

Allowances per Capita of Population.—Under the British North America Act of 1867, a grant of 80 cents per capita of population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per capita up to a population of 2,500,000, and at the rate of 60 cents per capita for so much of the population as exceeded that number. These allowances were last adjusted in 1951 following the Census. The allowances paid to the provinces in the year ended Mar. 31, 1953, amounted to \$10,465,338.

The Act to approve the Terms of Union of Newfoundland with Canada in 1949 provided for an annual subsidy equal to 80 cents per capita of the population of the Province (being taken at 325,000 until the first decennial Census after the date of union), subject to increase to conform with the scale of grants authorized by the British North America Act, 1907.

Special Grants.—In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining in regard to those provinces. For the year ended Mar. 31, 1953, the special grants amounted to \$2,468,380, distributed as follows:—

PRINCE EDWARD ISLAND.—Various special grants totalling \$155,880 per annum.

NEW BRUNSWICK.—An annual grant of \$150,000 since 1875 in consideration of the repeal of lumber duties reserved to the Province by the B.N.A. Act of 1867.

MANITOBA.—A special grant on the basis of population amounting at present to \$562,500 per annum.

SASKATCHEWAN AND ALBERTA.—An annual sum as compensation for loss of public lands revenue, based on their respective populations and amounting at present to \$750,000 for Saskatchewan and \$750,000 for Alberta.

BRITISH COLUMBIA.—A special grant in lieu of lands amounting at present to \$100,000 per annum.

¹ Excludes the additional special grants paid until 1941 to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia. Excludes additional payments to Provinces under the Wartime Tax Agreements and the Tax-Rental Agreements. Excludes transitional grant to Newfoundland. Includes payments under the provisions of the Maritime Additional Subsidies Act. Includes additional annual subsidy to Newfoundland under the Terms of Union. See text.

Additional Special Grants.—Additional special grants were voted annually to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia until 1941; they were suspended with the coming into force of the Wartime Tax Agreements, 1942. The grants were paid in 1947 and later years to the three Maritime Provinces, under the provisions of the Maritime Additional Subsidies Act, 1942. The Terms of Union with Newfoundland, 1949, provide for an additional annual subsidy of \$1,100,000 in recognition of the special problems of that Province by reason of geography and its sparse and scattered population.

Tax-Rental Agreements.—The Wartime Tax Agreements, 1942 (*see* 1946 Year Book, pp. 900-901), lapsed in the period from Oct. 30, 1946, to Mar. 31, 1947, and were succeeded by the Tax-Rental Agreements, 1947. These, in turn, were succeeded by the Tax-Rental Agreements, 1952. By the 1947 and 1952 Agreements, a province agrees to refrain from levying certain direct taxes, for a period of five years, in return for compensation from the Federal Government. The main purposes of these Agreements are to establish a more equitable system of taxation throughout Canada by reducing duplication of direct taxation and duplication of machinery for the collection of direct taxes, to give a greater measure of stability to the revenue of the provinces and to enable the Federal Government, together with the provincial governments, to carry out national policies intended to maintain high levels of employment and production.

Tax-Rental Agreements, 1947.—The 1947 Agreements were entered into by the Federal Government pursuant to the Dominion-Provincial Tax Rental Agreements Act, 1947. Seven provinces—Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia—entered into these Agreements for the full five-year period, the Yukon Territory for four years, and the Province of Newfoundland for three years. The Agreements contained the basic provisions of the Wartime Tax Agreements whereby the provinces and their municipalities withdrew their personal income taxes, corporation income taxes and special taxes on corporations, in return for compensation from the Federal Government. The Agreements contained significant changes and additions which had been worked out at the meetings of the Dominion-Provincial Conference on Reconstruction in 1945 and 1946, and in the negotiations that followed the June 1946 Budget offer of the Federal Minister of Finance. The main features of this offer, which were embodied in the Agreements, are outlined in the 1946 Year Book, pp. 883-884.

Under the 1947 Agreements, a province and its municipalities were required to refrain from levying personal income taxes, corporation income taxes and special taxes on corporations for the period Jan. 1, 1947, to Dec. 31, 1951. (Shorter periods were required of Yukon Territory and Newfoundland.) However, a province was encouraged to levy a corporation income tax of 5 p.c. in order to keep the level of income taxes on corporations in all provinces—whether or not they had entered into Agreements—approximately uniform, and such a tax was levied by all the provinces and Yukon Territory. The tax was imposed on the income of a corporation attributable to its operations in the province, and the Agreements provided

a set of rules according to which an appropriate allocation could be made of a corporation's income to the province. As provided in the Agreements, the tax was imposed under the same general provisions as those of the Income War Tax Act and The Income Tax Act, and was administered by the Federal Government without cost to the provinces. The revenue from the tax was paid over to each province but a corresponding reduction was made in the amount of compensation otherwise payable under the Agreements.

The 1947 Agreements were concerned also with the succession duties which were not "rented" under the Wartime Tax Agreements (*see* p. 1080).

The Agreements expressly permitted the imposition by a province of royalties and rentals on natural resources when such royalties and rentals were of a nature conforming with the definitions set forth in the Agreements. Provincial taxation of income derived from logging and mining operations, as defined in the Agreements, was also permitted. Furthermore, the Federal Government was obligated by the Agreements to allow such royalties, rentals and taxes to be deducted in the computation of income for federal income-tax purposes for the term of the Agreements.

Under the Agreements, the provinces were given a choice of two alternative bases of compensation. The components of the first option were \$12.75 per capita of provincial population in 1942, plus 50 p.c. of the province's 1940 revenue from personal and corporate income taxes and corporation taxes, plus the statutory subsidies payable in 1947. The components of the second option were \$15.00 per capita of provincial population in 1942, plus the statutory subsidies payable in 1947. A special arrangement was made for Prince Edward Island which was offered a flat amount of \$2,100,000—a sum slightly in excess of the amount determined by either of the two formulas. The guaranteed minimum annual payments to the provinces under the most favourable option and the adjusted annual payments for the period of the Agreements are shown in Table 29.

An interesting feature of the Agreements was the provision that, in the year following their termination, provincial taxpayers were to be allowed, by the Federal Government, tax credits of a maximum of 5 p.c. of the federal income tax, 50 p.c. of federal succession duties, and one-seventh of federal corporation income tax for similar taxes and duties paid to provincial governments. The main purpose of this provision was to enable the provinces to re-enter these tax fields with greater ease, if they so desired, after the termination of the Agreements.

Under an offer ancillary to the Agreements but one which applied to all provinces whether agreeing or not, the Federal Government pays to each province one-half of the federal corporation income tax collected on income of corporations derived in the province from generating and/or distributing to the public, electric energy, gas or steam, where this is the main business of the corporation. This arrangement originally had effect for the five taxation years ended Dec. 31, 1951, and has been extended under the Tax Rental Agreements Act, 1952, to the five taxation years ending Dec. 31, 1956.

29.—Guaranteed Minimum Annual Payments¹ to Provinces and Yukon Territory under Most Favourable Option, and Adjusted Annual Payments,¹ as Finally Calculated,² for Years Ended Mar. 31, 1948-52.

¹ Subject to deduction of statutory subsidies. (See Table 27, p. 1086.)

² In accordance with the terms of the Tax-Rental Agreements, payments for all five years were recalculated in June 1952, in the light of the revised statistics for gross national product and population.

³ Quebec and Ontario did not enter into the 1947 Agreements; consequently, the payments shown were not actually made.

Tax-Rental Agreements, 1952.—In December 1950, a Federal-Provincial Conference was held primarily to discuss fiscal and social security matters. At the Conference the Federal Government made an offer for new tax-rental agreements which was modified, subsequently, in minor respects only. This new offer, apart from the amount of the guaranteed minimum payments, contained substantially the same provisions as the 1947 Agreements. The provinces were again to repeal or suspend the same taxes for periods of five years, and were to be compensated in much the same manner although on a larger scale.

One important difference in the 1952 Agreements was that the provincial 5-p.c. corporation income-tax levy was abolished. By an amendment to the federal Income Tax Act, 5 p.c. was added to the federal rate and a credit of 5 p.c. given on corporation income earned within a non-agreeing province. The credit was raised the next year to 7 p.c. (see p. 1075). Another significant difference was that the 1952 Agreements contained additional protection for the provinces in the event of their re-entering the tax fields (temporarily given up) after the end of the five-year periods. The credits which the Federal Government undertook to allow taxpayers in provinces withdrawing from the Agreements remained the same in respect of the personal income tax and succession duties. In regard to the corporation income tax, the credit was raised to 7 p.c. and all Agreements were guaranteed for five years.

On the compensation side there were several differences. The provinces had the choice of two alternative methods of determining the guaranteed minimum annual payment to be received from the Federal Government. The first option was a guaranteed minimum payment based on the one allotted to a province under the 1947 Agreements with an increase proportionate to change in provincial population and per capita gross national product between 1942 and 1948. Increases in guaranteed minimum payments averaged almost 50 p.c.

The second option was designed to provide a more up-to-date evaluation of the rental value of the tax fields abandoned by the provinces. Under this option the guaranteed minimum payment was made up in the following way:—

- (1) The yield of a personal income tax of 5 p.c. applied to 1948 incomes in the province.
- (2) The yield of a tax of $8\frac{1}{2}$ p.c. on corporation profits earned in the province in 1948. (The rate of $8\frac{1}{2}$ p.c. was taken as fair measure of the corporation tax potential, since it took account of the special taxes on corporations levied traditionally by provinces as well as taxes on corporate profits.)
- (3) The average revenue received by the province from succession duties. (For the agreeing provinces this was the average of the revenue received during the last two years before their succession duties were suspended and, for Ontario and Quebec, the average of the three fiscal years 1946-47, 1947-48 and 1948-49.)
- (4) Statutory subsidies payable to the province for 1948.

This option was more favourable to only one province—Ontario. Under either option, these guaranteed minimum payments were, as formerly, subject to upward adjustment for changes in gross national product per capita and in provincial population from 1948. However, instead of using as adjustment factors the average of the ratios for the three years preceding the year of payment, there was a choice of the single year, or of the average of the two years preceding the year of payment. Another change was that the 'gross national product', used as an adjustment factor, was changed from the 'gross national product at market prices' to the 'gross national product at factor cost' in order to eliminate the effect of changes in indirect taxes.

All provinces, with the exception of Quebec, as well as the Yukon and North-west Territories, have signed Agreements. Ontario chose to retain its succession duties and receives reduced compensation on this account.

The guaranteed minimum annual payments under the 1952 Agreements, and the estimated payments calculated for the years ended Mar. 31, 1953 and 1954, are shown in Table 30.

30.—Guaranteed Minimum Annual Payments¹ to Provinces and Territories under Most Favourable Option, and Adjusted Annual Payments,² as Calculated² for Years Ended Mar. 31, 1953 and 1954.

Grand Totals¹	316,607	429,577	459,968

¹ Subject to deduction of statutory subsidies payable in 1952. (See Table 27, p. 1086.) ² The annual adjusted payments are instalment payments subject to final recalculation after Feb. 28, 1957, in the light of revised statistics for gross national product and population then available. They are also subject to recalculation in June of the year following the fiscal year in which the initial payments are made and at that time any additional payments, or deductions from the current year's payments, are made. The figures for the year ended Mar. 31, 1953, include additional payments calculated in June 1953 totalling \$2,872,000.

³ Since Ontario retained its succession duties, payments to this Province are subject to a deduction on this account. The deductions are to be finally determined when final information is available some time after the termination of the Agreement, but an estimated amount is deducted each year. The amount was \$10,205,000 for 1953 and \$11,646,000 for 1954.

⁴ Quebec had not entered into the 1952 Agreements as at Jan. 1, 1954; consequently, the payments shown were not actually made.

Subsection 5.—National Debt

The gross national debt of Canada at Mar. 31, 1914, was \$544,391,369 as against assets of \$208,394,519, leaving a comparatively small net debt of \$335,996,850 incurred almost completely for public works of general utility which, like the inter-colonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets, of the nation. The debt was also expanded by the subsidizing of enterprises like the Canadian Pacific Railway, which, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, the debt was incurred for productive purposes and was held mainly outside the country; the principal of the Federal Government funded debt payable at London, England, was \$302,842,485 on Mar. 31, 1914, as against only \$717,453 payable in Canada.

From 1914 to 1920, the gross debt increased by almost \$2,500,000,000 to a total of \$3,042,000,000 owing to heavy war and post-war expenditure and, while there was a slight reduction to a low point of \$2,544,586,411 at Mar. 31, 1930, additional expenditure during the depression years resulted in a gross debt of \$3,710,610,593 by Mar. 31, 1939.

From 1939 to 1946 there was an increase of \$15,249,235,590, incurred mainly for war purposes, bringing the total gross debt to \$18,959,846,183 at the end of March 1946. After deduction of active assets held by the Government, the net debt showed an increase of \$10,268,846,135 during this period, amounting to \$13,421,405,449 at the end of March 1946. At the end of March 1953, total gross debt had been reduced to \$17,918,490,812 and net debt to \$11,161,734,269.

The portion of the funded debt payable in foreign currencies decreased sharply during the war years, as was inevitable under conditions where almost the entire amount of the country's war financing was carried out through domestic operations. Of the total funded debt and treasury bills outstanding as at Mar. 31, 1953, amounting to \$14,810,527,589, only 2.66 p.c. was payable outside Canada—\$52,904,299 at London (England) and \$341,583,750 at New York.

31.—Summary of the Public Debt and Interest Payments thereon, Years Ended Mar. 31, 1944-53

NOTE.—Statistics for 1867-99 are given in the 1942 Year Book, p. 775; those for 1900-13 in the 1945 edition, p. 944; those for 1914-35 in the 1947 edition, p. 972; and those for 1936-43 in the 1951 edition, p. 1009.

Year	Gross Debt	Net Active Assets	Net Debt	Net Debt Per Capita ¹	Increase or Decrease of Net Debt During Year	Interest Paid on Debt	Interest Paid Per Capita ²

1953...	17,918,490,812 ⁵	6,756,756,543 ⁵	11,161,734,269	755.14	-23,547,277	451,339,521	31.28

¹ Based on the official estimates of population for June 1 of the year indicated (see p. 129). ² Based on the official estimates of population for June 1 of the year immediately preceding the one indicated (see p. 129).

³ The apparent increase in interest paid is due to the accrued interest on refundable taxes having been charged in the year of repayment. ⁴ Excludes \$87,510,068 adjustment required to place interest on public debt on accrued basis.

⁵ The figures for 1953 are not strictly comparable with those for previous years, chiefly because of changed methods in accounting for cash.

Funded Debt Operations.—The funded debt and treasury bills outstanding as at Mar. 31, 1953, are given in Table 32 and information on the Federal Government securities (payable in Canada) issued during the year ended Mar. 31, 1953, is given in Table 33.

Guaranteed Debt.—Besides the direct debt of the Federal Government, already dealt with, there are large indirect obligations arising mainly out of the guarantee of securities, by the Federal Government, of the railway lines that now form the Canadian National Railways and the subsequent extensions thereof. Together with these are other small indirect obligations originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of the Harbour Commissions issued mainly for harbour improvements. Since 1932, guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business by the Bank of Canada on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of the deposit required to be maintained in the Bank of Canada by every chartered bank came into force. This guarantee must be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities and if the Bank suspends payment of any of its liabilities".

Full details of other guarantees also outstanding at Mar. 31, 1953, are given in Schedule "V" to the *Public Accounts* for 1953.

34.—Guaranteed Debt of the Federal Government (Amounts Held by the Public), as at Mar. 31, 1947-53

NOTE.—Figures for 1914-23 are given in the 1943-44 Year Book, p. 837; those for 1924-35 in the 1947 edition, p. 978; and those for 1936-46 in the 1951 edition, p. 1013.

Section 3.—Provincial Public Finance

In order to prepare comparable provincial finance statistics it is essential that data be presented, to the greatest possible extent, in uniform categories. In many instances, activities relating to a specific function are excluded by some provincial governments from their ordinary account, whereas similar activities are included by other provinces. The special or administrative funds of this nature so excluded are, therefore, added to provincial ordinary account and capital account to arrive at revenue and expenditure in the tables of this Section. Thus, it is obvious that the figures of revenue and expenditure presented will differ considerably in some cases from the totals shown in provincial public accounts.

Fiscal periods dealt with are as nearly coincident as is possible in view of the variations in provincial fiscal year-ends. Figures for the Province of Newfoundland are included commencing with the year 1949 and those for Yukon Territory with the year 1950.

Subsection 1.—Revenue and Expenditure of Provincial Governments

The figures of revenue and expenditure presented in this Subsection do not agree with those shown in Tables 1 and 3, pp. 1057 and 1058-1059, mainly because of differences in the methods used to compute "net" figures.

The classification of revenue by source and of expenditure by function was revised considerably in 1946 and again in 1948. Details of these changes may be found in the 1951 Year Book, p. 1014, and in the 1952-53 Year Book, p. 1064.

The term "general" as used in this edition, differs in concept from that used in previous years, in so far as revenue and expenditure are concerned. Heretofore, "general" revenue and expenditure included only provincial ordinary or current account items with the addition of those special or administrative funds, working

capital funds, and funds of provincial institutions that are added to achieve inter-provincial uniformity. Currently, however, "general" includes not only those provincial accounts described above, but also the revenue and expenditure transactions of provincial capital accounts.

"Net general revenue" (see Tables 35 and 36) is arrived at by deducting from "gross general revenue" (a) all institutional revenue, (b) revenue in the form of interest, premium, discount and exchange, (c) grants-in-aid and shared-cost contributions, and (d) all capital revenue. These revenues are then offset against the related functions of expenditure to arrive at "Net general expenditure", as shown in Tables 35 and 37. The term "ordinary" now replaces the former "general" i.e., "ordinary" excludes capital account transactions (see Table 38).

The following statement gives some indication of the increase in the revenue collected and services rendered by the provincial governments since 1946, the year this statistical series was introduced.

¹ Comparable with figures given in previous years, described as "gross general revenue" and "expenditure". See text on pp. 1094-1095.

Subsection 2.—Debt of Provincial Governments

The average coupon rate of gross bonded debt of Provincial Governments has decreased from 3.66 p.c. in 1947 to 3.47 p.c. in 1951.

Tables 39 to 42 dealing with the direct and indirect debt of the Provincial Governments reveal that while total gross bonded debt has steadily increased in the past five years, the average coupon rate has decreased slightly. Table 40 reflects the preponderance of bond issues payable in Canada only. There has been a steady decline in bonded debt payable in London (England).

Section 4.—Municipal Finance

Subsection 1.—Municipal Assessed Valuations

The revenue resources of municipalities are limited, generally, to direct taxation based on assessed valuations of real and other types of property. In the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba and Alberta, municipalities assess and tax personal property. In Alberta municipal districts, the valuations of personal property assessed have risen sharply with the growth of the oil industry. In Manitoba, the personal property tax is used generally by all classes of municipalities except cities. Aside from property, the most important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuations. A variation of methods, schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Four of the provinces have other miscellaneous types of assessment, the general nature of which are given in the footnotes to Table 43.

It should be noted that the figures in Table 43 are not entirely comparable, on an interprovincial basis, from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws, which are not all similar either in application or in effect. For instance, in British Columbia cities and municipal districts, improvements cannot be taxed on a value in excess of 75 p.c. of taxable values or, in most of the villages, in excess of 50 p.c. of taxable values; the values actually taxed in 1951 ranged from nil to 75 p.c. In the majority of cases, improvements were assessed for tax purposes at 50 p.c. of taxable values, but for all municipalities the total improvements actually taxed represented 50.2 p.c. of total taxable values. In addition, there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be caused by the lack of integrated municipal assessment systems and uniform standards for establishing values on a province-wide basis, under the direction and control of a central authority. Some provinces, however, have made considerable progress along these lines in recent years.

¹ Includes the following: N.S.—household tax, Halifax; N.B.—occupancy tax, Fredericton, and rentals tax, Moncton; Sask.—special franchise.

² Valuations of real property wholly exempt from taxation by statute except Nova Scotia which includes \$2,807,946 personal property exemptions.

³ Taxes are levied on rental values in most municipalities using a property base.

⁴ Includes estimated values for some municipalities; total exemptions are incomplete.

⁵ Includes some other types of valuations not specified.

⁶ Includes personal property tax for local improvement districts and commissions, not separable.

⁷ Includes improvement districts.

While complete figures for tax-exempt properties are not available for each province, the information given shows that these properties have assumed relatively high proportions. Most provinces have shown consistent increases in taxable assessed valuations that may be attributed largely to the stimulus to business and industry arising from the War and the buoyancy of the economy in succeeding years.

Subsection 2.—Municipal Taxation

Table 44 shows, by province, the taxes levied by municipalities in the years 1947-51 and the total taxes outstanding at the end of those years. Although these figures are as nearly comparable as existing published reports permit, nevertheless they still reflect some inconsistencies owing particularly to intra-provincial variations in the division of responsibility for tax administration between municipalities and school authorities. In some instances, school taxes are not included in the municipal levies.

¹ Does not include schools; information not available.

² Excludes certain provincial and other special taxes (see text following this table), but includes taxes in improvement districts.

Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, extreme caution should be exercised in using the figures in Table 44 as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan and Alberta municipalities are required to levy certain taxes for and on behalf of the provincial government and for other special purposes for which there is no comparable situation in other provinces. The amounts of such taxes excluded in the municipal levies in Table 44 in these two provinces are as follows:—

There has been a slow steady rise in the trend of municipal tax levies in recent years. While most provinces show increases, this does not necessarily mean an increased burden on the individual taxpayer in all instances, but is the result, in part at least, of increased assessed valuations. In the Provinces of Nova Scotia and New Brunswick the increases have, to a considerable extent, resulted from the establishment of larger school units, so that certain municipalities are now levying taxes formerly levied by rural school boards. During the years 1947-51, tax collections continued high in relation to total levies, resulting in substantial reductions in the amount of taxes outstanding, although these are still relatively high in most provinces. The situation varies considerably for different classes of municipalities.

Subsection 3.—Municipal Debt

The rapid growth experienced by municipalities in Canada, coupled with increased demands and responsibilities for improvements, schools, utilities and other services or facilities, has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 1920's and early 1930's. From 1933 to 1946 the trend was downward but since 1947 it has shown a considerable increase.

Several important factors contributed to the 1933-46 decline, not the least important of which was the measure of control exercised by the provincial governments over capital expenditure involving the incurring of debt. In addition, there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion which, along with widespread demands to ease the tax burden on real property, resulted in the severe curtailment of capital undertakings and works requiring debenture financing. Also, the greater part of the municipal long-term debt was represented by serial or instalment-type debentures, which require yearly repayments of principal. During the 1930's, the rehabilitation of existing assets and new works and improvements necessitated by normal expansion and development were sacrificed mainly in the interests of the taxpayers. After the outbreak of war in 1939 the policy of deferment was continued, or even extended, to free the financial market to the needs of the Federal Government in meeting war-financing requirements. Since the end of the War, however, municipalities have resumed their improvement programs and thus increased their debenture debts. Table 45 shows figures of municipal indebtedness for 1950 and 1951 and includes temporary loans and other liabilities in addition to debenture debt.

45.—Debt of Municipal and School Corporations, by Province, for their Fiscal Years Ended in 1951, and Totals for 1950 and 1951

NOTE.—Figures shown are compiled from published reports of provincial Departments of Municipal Affairs, auditors reports and financial statements of municipalities, and information secured from other official sources.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—National Accounts*

The national accounts, in summarizing the nation's economic transactions, make possible the study of interrelationships in the economic system as a whole. They are particularly important to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

The main body of the national accounts provides a summary of production and consumption in terms of prices established in the market. Thus, it is necessary to keep in mind that the value of the nation's production may change because of price changes as well as variations in the volume of output. When the resources of the economy are fully employed the volume of goods and services produced can increase but slowly from one year to the next in response to population growth and additions to the country's real wealth, or as a result of more efficient utilization of existing resources. Consequently, a rapid rise in the value of output under conditions of full employment is explained mainly by price increases. However, when there are unemployed resources in the country, a substantial increase in the value of production of goods and services may occur from one year to the next if these resources are brought into use, even though prices remain stable.

Data are now available showing volume changes as well as price changes in gross national expenditure. Gross national expenditure is shown in constant dollars (i.e., in terms of average prices prevailing in the period 1935-39) in Table 3. Since the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. For all other tables the data are expressed in current dollars, and year-to-year changes in these tables must be considered in relation to price changes over the period.

The tables presented here cover the more important aspects of the national income analysis. Tables 1 and 2 show the main aggregates of national income, gross national product, gross national expenditure, and their components; Table 3 shows gross national expenditure in constant dollars and other tables are included to show the source and disposition of personal income, government revenue and expenditure, and personal expenditure on consumer goods and services.†

* Prepared in the Research and Development Division, Dominion Bureau of Statistics.

† More detailed information is given in DBS bulletins, *National Accounts, Income and Expenditure, 1926-1950* and *National Accounts, Income and Expenditure, 1949-1952*.

National Income.—Net national income at factor cost or, more briefly, national income, is the income currently earned by persons in productive pursuits, whether their services are rendered to business, to governments or directly to the consuming public. It includes the earnings of residents of Canada from the current year's production of goods and services, that is, the sum of salaries and wages, supplementary labour income (employer contributions to unemployment insurance, pension funds, Workmen's Compensation funds and income in kind, etc.), profits, interest, net rent and net income of agriculture and other unincorporated business.

Gross National Product.—Gross national product is the market value of all final goods and services produced in the year. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus depreciation allowances and similar business costs.

Gross National Expenditure.—Gross national expenditure measures the same aggregate as gross national product, namely, the total production of final goods and services at market prices. However, gross national product is measured in terms of costs, whereas gross national expenditure is obtained by adding together all sales and adjusting them for imports and changes in inventories. Four broad types of sales can be distinguished: sales to persons, to governments, to business on capital account (gross domestic investment including changes in inventories), and to non-residents (exports). The total of these sales includes imports of goods and services but, as the purpose is to measure only domestic production, imports of goods and services, including net payments of interest and dividends to non-residents, are deducted.

Personal Income.—Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. Thus, it includes (in addition to salaries and wages, net income of unincorporated business, interest and dividends and net rental income of persons) transfer payments from governments, such as family allowances, unemployment insurance benefits and war service gratuities. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Historical Perspective.—Between 1926 and 1951—slightly less than a generation—gross national product increased fourfold in value. A substantial part of this apparent growth was the result of rising prices; however, it will be seen from Table 3 that the growth in physical production was 140 p.c. The population of Canada in this period increased by 48 p.c. so that the per capita growth in physical product was over 60 p.c., an indication of the growth in living standards and prosperity that occurred during this period. This increase is the more remarkable in the light of the disastrous set-back suffered during the depression years and the more recent decline in the average hours worked weekly in industry. In 1933, at the depth of the depression, per capita real production registered a decline of one-third as compared with the relatively prosperous year of 1929.

The historical series reveal many other interesting features of the economy including, among others: the relative stability of the portion of total income going to labour in the form of wages and salaries as opposed to the instability of farm and investment incomes (Table 4); the increasing significance of government spending in the economy as opposed to the declining importance of exports (Table 2); the

relative changes in the proportion of government revenue represented by direct and indirect taxes (Table 6); and changing consumer preferences as revealed by the composition of personal expenditure (Table 8).

Current Perspective.—*Gross National Product and National Income.*—Gross national product in 1952 was estimated at \$23,011,000,000, a 7-p.c. increase over the 1951 total of \$21,450,000,000. Some of this increase resulted from a general increase in the prices at which the total output of goods and services was valued. After having made allowance for these price changes, however, there remained an increase in total real output of 6 p.c. Further comment is made below on the manner in which this increase in real output was absorbed by major groups such as consumers, governments and businesses (for investment purposes). The increase in total output was accompanied by a gain of 1 p.c. in the employed labour force. There was a continuation of the shift from agricultural to non-agricultural pursuits, so that the increase in the employed non-agricultural labour force exceeded the over-all increase.

National income in 1952 was estimated at \$18,135,000,000, an increase of 6 p.c. over the preceding year. Wages, salaries and supplementary labour income, the largest component of national income, amounted to \$10,743,000,000, a gain of 11 p.c. over 1951, while investment income, which consists of corporation profits, interest and net rental income received by persons, government investment income and a number of other items, showed little change from 1951. In the unincorporated business sector, there was a sharp decline of 8 p.c. in accrued net income of farm operators from farm production, the result of lower gross income and higher operating expenses. On the other hand, net income of non-farm unincorporated business, which includes unincorporated retailers, unincorporated manufacturing establishments, professionals and unincorporated service establishments, increased slightly.

Gross National Expenditure.—Gross national expenditure indicates the manner in which the nation's output is absorbed. In 1952, there was a substantial increase in the real amount taken by consumers in contrast to 1951, when the over-all value increase of 10 p.c. was almost exactly matched by the price rise. Expenditure on durable goods also increased significantly in physical terms and in value terms 1952 expenditure was 11 p.c. higher than that of the previous year. Expenditure on goods and services by federal, provincial and municipal governments rose by over \$1,000,000,000 or approximately 31 p.c., from \$3,212,000,000 in 1951 to \$4,216,000,000 in 1952. Most of the increase was accounted for by the rise in federal defence spending from \$1,143,000,000 in 1951 to \$1,832,000,000 in 1952, a gain of 60 p.c. The major components of gross domestic investment showed increases in 1952. Investment in new housing increased slightly although the volume remained about the same as in 1951, a result of increases in building costs. Investment in new non-residential construction increased by about 17 p.c. in value, with a corresponding increase in volume of 10 p.c. Investment in new machinery and equipment showed a small increase, amounting to 5 p.c. in physical volume, chiefly the result of increased spending by basic industries and utilities. Additions to inventories, in both volume and value terms, were considerably lower than in 1951.

In 1952 there was a net surplus on current international account, following two years of deficits. The over-all surplus, represented by the difference between 'exports of goods and services' and 'imports of goods and services' in Table 2, was about \$164,000,000. Reflecting this surplus, the Canadian dollar strengthened its position on the international market and exchange reserves continued to grow.

Personal Income, Personal Saving and Spending.—Personal income in 1952 amounted to \$17,073,000,000, an increase of nearly 9 p.c. as compared with 1951. The increase was the net result of divergent movements in components, varying from a decline of 12 p.c. in net farm income to an increase of 34 p.c. in military pay and allowances. Direct personal tax collections rose sharply from \$1,028,000,000 in 1951 to \$1,320,000,000 in 1952, a gain of \$292,000,000 or 28 p.c. This increase was almost wholly accounted for at the federal level by an increase in personal tax collections. Personal expenditure amounted to \$14,334,000,000, 8 p.c. above 1951. The composition of personal expenditure is shown in Table 8, p. 1115.

Subtracting personal taxes and personal expenditure from personal income, personal saving of \$1,419,000,000 is obtained for 1952. This represents the amount saved during the year, not the total accumulated savings of persons, which would be very much greater. Savings include not only additions to liquid savings in the form of cash and government bonds but also net repayment of debt, increase in home-owner's equity and the reinvested earnings of farms and small businesses.

Section 2.—Canada's International Investment Position*

A large balance of Canadian indebtedness to other countries has always been characteristic of Canada's international investment position. Much of the development of Canada has been financed by investments of capital from other countries, particularly in earlier decades. This balance of indebtedness has been reduced from the levels obtaining immediately before World War II which, in turn, were lower than the earlier peak period around 1930. Net indebtedness to other countries at the end of 1952 was \$4,700,000,000 compared with about \$6,500,000,000 in 1930. The balance of Canada's international indebtedness did not change significantly in 1952, contrasting with the two previous years when appreciable increases occurred through both net inflows of capital and retained earnings.

Foreign Investments in Canada.—The relative importance of British and United States capital invested in Canada has changed greatly in recent decades. British capital constituted the largest part of the external capital invested in Canada before World War I but United States investments underwent a rapid development during and after that War. By 1926, the first year for which official estimates are available, United States investments in Canada had a value of \$3,196,000,000 compared with British investments of \$2,636,000,000. During the 1930's, reductions occurred in the amount of external capital invested in Canada.

Further growth in United States investments in Canada took place during World War II and, by the end of the War, these investments had reached a new peak, whereas British investments in Canada were sharply reduced by repatriation of securities. As a result of these divergent trends in British and United States investments, total non-resident investments in Canada increased only moderately during World War II.

* Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. A more extended review appears in DBS report, *Canada's International Investment Position, Selected Years 1926 to 1949*, and statistics for more recent years in the reports, *The Canadian Balance of International Payments, 1952*, and *International Investment Position and The Canadian Balance of International Payments in the Post-War Years (1946-1952)*.

In the post-war years there was a substantial increase in the value of United States capital invested in Canada. The largest increases occurred in the years following 1948, particularly in 1950, 1951 and 1952 when there were substantial net inflows of United States capital for long-term investment. The increase in the value of United States investments in Canada in the seven years 1946 to 1952 amounted to about \$3,000,000,000. The growth in direct investments in Canadian branches, subsidiaries and controlled companies accounted for \$2,200,000,000 of this increase and increased holdings of government and municipal bonds for nearly \$400,000,000. The accelerated rate in the later post-war years was accounted for by the development of petroleum and other resources. Throughout the period, reinvested earnings accounted for nearly one-half the increased investment. Portfolio holdings of government and other securities increased each year, except for 1947. There were particularly large increases in 1950 in holdings of Government of Canada bonds through a demand for outstanding domestic issues, and in 1951 in holdings of provincial and municipal bonds through new issues in the United States. Repatriation of government bonds on a substantial scale in the later months of 1951 and in 1952 was offset by sales of corporate securities. Direct investments in companies in Canada controlled in the United States made up the largest part of United States investments. In 1951, such investments were valued at \$3,922,000,000 in 2,821 establishments. By the end of 1952 the value of this group of investments had risen to about \$4,540,000,000 out of total investments of United States capital in Canada of approximately \$8,000,000,000.

At the end of 1952, British investments of somewhat over \$1,800,000,000 were only moderately higher in value than at the end of World War II. A considerable increase in these investments occurred in 1950 and 1951 in the direct investment group, and the totals since 1949 also increased significantly by the inclusion of British investments in Newfoundland. The principal change in the post-war period in investments of other countries in Canada occurred in 1951, when a substantial increase took place, mainly through larger portfolio holdings of Canadian stocks.

Canadian capital has been the principal source of financing for Canadian development in the past 20 years or more. Investment, which was subnormal during the 1930's, showed notable expansion in certain fields during World War II and rose to peak levels in the post-war years. Even in 1950 and 1951, when net capital inflows were very substantial, the proportion of investment financed by non-resident capital was minor. In those years the net contribution by non-residents and foreign-controlled companies to the savings used for all types of investment in Canada was only about one-seventh of the total.

Thus, the ratio of investments of external capital, in relation to total investments of capital in Canada, has been declining for some years. It is difficult to express this relationship in terms of any simple ratio, however, because of the variety of types of investment that must be compared. Important changes have taken place also in the relative positions of different types of investment. Non-resident holdings of Canadian bonds constitute a much smaller proportion of the outstanding funded debt of Canadian governments and corporations than before World War II. The external holdings of Canadian bonds represented only about 15 p.c. of the total Canadian funded debt at the end of 1952 compared with about one-third of the bonds outstanding in 1939. The most conspicuous feature in this change in ownership has been the great increase in Canadian holdings. As a result mainly

of wartime financing, Canadian holdings of Canadian bonds rose from about \$6,500,000,000 in 1939 to \$19,700,000,000 in 1952. Non-resident holdings did not change much in total between these two years and a decline in British holdings, through wartime repatriation, was offset by a rise in United States holdings in the past few years.

¹ Totals are rounded figures and may not represent sums of components; they are exclusive of short-term commercial indebtedness and blocked currencies.

Non-resident ownership of Canadian industry, mines, railways and public utilities was estimated in 1951 to be about 30 p.c. of the total capital invested, a percentage less than the corresponding ratio at the beginning of World War II. The ratio of non-resident ownership in Canadian manufacturing companies in 1950 was estimated at about 39 p.c. The percentages for the different groups of the manufacturing industry varied considerably but was greatest in the non-ferrous metal industry, being close to 75 p.c., as compared with about 25 p.c. in the textile industry; in the chemical industry it was more than 50 p.c. and in the vegetable products, animal products, wood and paper products, iron and its products and the non-metallic minerals groups the ratio was between 33 p.c. and 50 p.c. Furthermore, in some subdivisions of these industries, non-resident ownership and control

were predominant even though only the minor parts of the groups, when taken as a whole, were owned abroad. Other important industrial subdivisions were mainly Canadian owned and controlled, such as the primary iron and steel and the cotton textile industries.

Non-resident ownership of railways was large, being 40 p.c. in 1951. The mining and smelting field was also developed to an important extent by external capital, the ratio of non-resident ownership being 47 p.c. Some major units in this field were non-resident-controlled.

In financial institutions, non-resident ownership was substantial but non-resident control was largely limited to branches of foreign insurance companies; Canadian banks, trust companies and most Canadian insurance companies were mainly Canadian-controlled.

From 1946 to 1951, capital inflow from the United States for petroleum investment amounted to about \$532,000,000, or over 33 p.c. of the net capital movement from that country to Canada. The book value of United States ownership in the industry, which reflects profits and losses and accounting adjustments in addition to capital movements, increased from \$115,000,000 to \$636,000,000, or from 39 p.c. to 52 p.c. of the aggregate book value of the industry in Canada. United States investment in United States-controlled companies in Canada was valued at \$556,000,000, or 45 p.c. of the industry at the end of 1951.

Canadian Assets Abroad.—Canada's external assets have changed greatly in size and composition in recent years. The total value, including holdings of gold and foreign currencies, rose from about \$1,900,000,000 in 1939 to \$6,400,000,000 at the end of 1952. The principal factor in this increase was the extension by the Federal Government of loans and export credits to the United Kingdom and other countries. At the end of 1952, Canadian Government credits outstanding totalled over \$1,850,000,000. Included in this total was about \$200,000,000 outstanding on the 1942 loan to the United Kingdom, \$1,157,000,000 on the 1946 loan to the United Kingdom and about \$473,000,000 of post-war export credits and advances. In addition, at the end of 1952, official holdings of gold and foreign exchange aggregated about \$1,809,000,000; in terms of the U.S. dollar these reserves were higher at that date than in any earlier year. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank and the International Monetary Fund which, by the end of 1952, amounted to \$70,900,000 and \$322,500,000, respectively. A small part of the subscription to the Bank was in the form of convertible exchange and \$75,000,000 of the subscription to the Fund was in gold. The remainder of both subscriptions was made in the form of demand notes of the Federal Government or in Canadian funds.

Besides the officially owned assets referred to above, there were the privately owned investments in the form of foreign securities and property owned by Canadian companies and individuals. In 1939, these privately owned assets constituted most of the total value of Canadian assets abroad, whereas, since the end of World War II, they amounted to only a minor part of the total, chiefly because of the sharp rise in officially owned assets. Total privately owned portfolio investments abroad

declined in value since 1939 because of the liquidations of Canadian holdings of United States securities. Portfolio holdings of foreign securities owned in Canada were reduced from \$719,000,000 at the end of 1939 to \$609,000,000 at the end of 1951. This decline was less than the total sales of these securities by private investors during the period as there was a considerable increase in the book value of holdings of United States stocks. Appreciable gains occurred in Canadian direct investments in businesses outside Canada which had a value of \$1,160,000,000 at the end of 1951 compared with \$671,000,000 at the end of 1939. During 1952, there was a further substantial increase in the value of this group of investments.

12.—Canadian Assets Abroad, 1939, 1946, 1948, 1950 and 1951

NOTE.—Excludes investments of insurance companies and banks, Canada's subscriptions to international financial institutions and short-term assets, other than official holdings of gold and foreign exchange. Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates.

Totals.....	1,160	609	1,922	1,848	5,539

The privately owned Canadian investments abroad are chiefly in the United States, the total value of investments in that country at the end of 1951 being \$1,282,000,000. Investments in other foreign countries in 1951, mainly in Latin America, were \$277,000,000, while investments in the United Kingdom were \$108,000,000, and in other Commonwealth countries \$102,000,000. These figures exclude the investments abroad of Canadian insurance companies and banks, as well as the official assets referred to in Table 13, and certain small amounts of miscellaneous investments that were difficult to evaluate.

Section 3.—Corporation Profits and Income to Shareholders

Estimates of corporation profits presented in this Section cover all Canadian corporations. The figures for the years 1944 to 1951 are based on the reports, *Taxation Statistics*, published annually by the Taxation Division, Department of National Revenue, Ottawa. Prior to 1944, corporation financial statistics were made the subject of a comprehensive study in the Department of National Revenue.

Profits before taxes of Canadian corporations are shown in Table 14 for selected years 1926-52. From a peak of \$530,000,000 in 1929, they dropped to \$17,000,000 in 1932 and then, with the exception of a decline in 1938, rose steadily from 1932 to 1942, the wartime peak. Since 1944, they have risen fairly steadily, with declines in 1949 and 1952. In the latter year, corporation profits before taxes were \$2,640,000,000, down \$170,000,000 from the record high in 1951.

Corporation profits taxes, which were relatively low during the period 1926 to 1939, ranged from 40 p.c. to 50 p.c. of profits during the war period. After the War they dropped to 35 p.c. of profits in 1948, but were again over 50 p.c. in both 1951 and 1952. It should be noted that the 1951 and 1952 tax figures include the elective tax on undistributed income, which began only in 1950. Tax liabilities were \$1,372,000,000 in 1952.

Dividends paid by corporations (excluding dividends paid to other Canadian Corporations) reached a peak in 1950 of \$681,000,000 and declined in both 1951 and 1952 to \$634,000,000 in 1952. Undistributed corporation profits also declined from 1950 to 1952 because of the sharp increase in taxes from 1950 to 1951 and the drop in profits in 1952.

14.—Profits, Taxes and Dividends of Canadian Corporations, Selected Years, 1926-52

(Millions of dollars)

Item	1926	1929	1932	1939	1942	1944	1946	1949	1950	1951	1952
Corporation profits before taxes ¹	403	530	17	689	1,292	1,221	1,455	1,906	2,506 ²	2,810 ²	2,640

Corporation profits after taxes.....	369	482	-15	574	663	623	801	1,175	1,525 ²	1,381 ²	1,268
Deduct: dividends paid and charitable donations.....	190	271	157	302	308	282	390	568	681	660 ²	634
Undistributed corporation profits.....	179	211	-172	272	355	341	411	607	844 ²	721 ²	634

¹ Includes corporate taxable income, depletion charges and charitable donations, and are adjusted for corporate losses, renegotiation of war contracts and conversion to a calendar-year basis. ² Includes elective tax on undistributive income of \$54,000,000 in 1950, \$48,000,000 in 1951 and \$10,000,000 in 1952.

Analysis by Industries.—Detailed data on profits by industries are available for the years since 1944. Corporation profits as shown in Table 15 do not agree with those in the national accounts since the national accounts figures include depletion charges and charitable donations. National account figures are also adjusted for renegotiation of war contracts and for conversion to a calendar-year basis. It should be noted that only federal taxes are deducted from the profits by industry. Provincial taxes were not significant in amount from 1944 to 1946, but after 1947 they were levied at the rate of 7 p.c. for Ontario and Quebec and 5 p.c. for the other provinces. Profits of Newfoundland corporations are included for 1950 and 1951 only.

Between 1950 and 1951, profits before taxes increased by \$417,000,000 or by 18.5 p.c. Of the 34 sub-groups listed in Table 15 only seven showed decreases in profits. The most significant increases took place in the pulp and paper, other metal mining, transportation equipment (except automobiles), transportation, communication and storage, and wholesale trade groups. None of the declines were very significant.

Because of the 20-p.c. surtax imposed on corporations in 1951, profits after taxes rose only 0.9 p.c. compared with 18.5 p.c. before taxes. Seventeen industrial groups showed declines in profits from 1950 to 1951 and seven declined before taxes. However, no industrial group showed a net loss.

15.—Corporation Profits, by Industry, Before and After Federal Income Taxes, 1946 and 1949-51

NOTE.—Figures are for the company fiscal years ended within the calendar years. SOURCE: *Taxation Statistics* published annually by the Taxation Division, Department of National Revenue, Ottawa.

PART I.—CURRENCY AND BANKING

A historical sketch of currency and banking in Canada, tracing certain features of the central banking system that culminated in the establishment of the Bank of Canada appears in the 1938 Year Book, pp. 900-905. In chronological order these were:—

(1) *Central Note Issue*, permanently established with the issue of Dominion notes under legislation of 1868.

(2) *The Canadian Bankers' Association*, established in 1900 and designed to effect greater co-operation among the banks in the issue of notes, in credit control and in various aspects of bank activities.

(3) *The Central Gold Reserves*, established by the Bank Act of 1913.

(4) *Rediscount Facilities*, originated as a war measure by the Finance Act of 1914 and made a permanent feature of the system by the Finance Act of 1923. This Act empowers the Minister of Finance to issue Dominion notes to the banks on deposit by them of approved securities, thus providing the banks with a means of increasing their legal tender cash reserves at will.

Section 1.—The Bank of Canada

The Bank of Canada Act (R.S.C. 1952, c. 13).—The Bank of Canada was incorporated in 1934 and commenced operations on Mar. 11, 1935. An account of the capital structure of the Bank and its transition from a privately owned institution to one wholly government owned is given in the 1941 Year Book, p. 800.

The Bank is authorized to pay cumulative dividends of 4½ p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The Act provided that the remainder of the

profits were to be paid, in specified proportions, into the Rest Fund of the Bank (so long as it remained less than twice the paid-up capital) and the Consolidated Revenue Fund. Since 1944, when the transfer brought the Rest Fund up to slightly more than twice the paid-up capital, the whole of the remaining profits have been paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Government of Canada and provincial governments without restriction if of a maturity not exceeding two years and in limited amounts if of longer maturity; short-term securities of the Government of Canada and provincial governments may be rediscounted. The Bank may buy and sell short-term securities of Commonwealth countries, the United States or France without restriction if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency and, if endorsed by a chartered bank, may rediscount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Government of Canada or any provincial government against certain classes of collateral, and advances of specified duration may be made to the Government of Canada or any provincial government in amounts not exceeding a fixed proportion of such government's revenue. The Bank may accept deposits that do not bear interest from the Government of Canada or provincial governments, or from any chartered bank or any bank incorporated under the Quebec Savings Banks' Act. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may also deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with at pp. 1128-1129.

The Bank of Canada Act provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. Under the terms of the Exchange Fund Order, 1940, authorizing the transfer of the Bank's gold holdings to the Foreign Exchange Control Board, the minimum gold reserve requirement was temporarily suspended; this suspension was continued under the Foreign Exchange Control Act, 1946, and subsequently to July 4, 1952, under the Currency, Mint and Exchange Fund Act (R.S.C. 1952, c. 315). The reserve, in addition to gold, may include silver bullion; balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in gold currencies in central banks in gold-standard countries or in the Bank for International Settlements; treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days, payable at London or New York, or in a gold-standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America or a gold-standard country.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities, payable in Canadian dollars, in the form of deposits with, and notes of, the Bank of Canada.

The Bank acts as the fiscal agent of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

Head office of the Bank is at Ottawa and it has an agency in each province, in the cities of St. John's, Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors; he is assisted by a Deputy Governor and an Assistant Deputy Governor appointed by the Board of Directors subject to the approval of the Governor in Council. The twelve directors are appointed by the Minister of Finance, with the approval of the Governor in Council, for terms of three years. In the transaction of the business of the Bank, each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor and one member of the Board. Meeting once a week, this Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an ex officio member of the Board of Directors and of the Executive Committee, but is without a vote.

The Governor of the Bank, or in his absence the Deputy Governor, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

The Bank of Canada and Its Relationship to the Canadian Financial System.—An article under this title is given in the 1937 Year Book, pp. 881-885. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank and its duties as the Government's banker.

Bank of Canada Operations.—The expansion of Bank of Canada liabilities and assets in recent years has provided for increased Bank of Canada notes in active circulation (the chartered-bank note issue has been gradually retired) and has enlarged the cash reserves of the chartered banks.

The Industrial Development Bank.—The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

“To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.”

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors and Assistant Deputy Governor of the Bank of Canada. The \$25,000,000 capital stock of the Bank (completely paid up) was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises or commercial air services in Canada with respect to which it is empowered to:—

- (1) lend money or guarantee loans;
- (2) enter into underwriting agreements with regard to any issue of stock, bonds or debentures;
- (3) acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

Section 2.—Currency

Subsection 1.—Notes and Coinage

Note Circulation.—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. The main steps of this development that remained as permanent features of the system are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revisions of the Bank Act cancelled the

right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

The classification of Bank of Canada notes in circulation, by denomination, shown in Table 3 for 1950-52 is not strictly comparable with the classification for earlier years. Dominion notes have been excluded from the denomination classification and the total only is shown. Also, an item has been added showing the outstanding chartered bank notes issued originally for circulation in Canada. The statistics of total notes in the hands of the general public are comparable with earlier years.

3.—Bank of Canada Notes, by Denomination, and Other Notes in Circulation, 1950-52

NOTE.—Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes because of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

4.—Annual Averages of Note Circulation in the Hands of the Public, 1943-52

NOTE.—Newfoundland has long used Canadian bank notes so that when that Province united with Canada in 1949, no adjustment was necessary in the circulation figures, but the effect of including the population of Newfoundland from 1949 was to reduce the per capita note circulation by an estimated \$1. Figures comparable to those shown below for the years 1926-42 are given in the 1946 Year Book, p. 959.

¹ Total issue less notes held by chartered banks. ² Gross note circulation only; notes held by other chartered banks are not available. Includes, prior to 1950, a relatively small amount issued for circulation outside Canada. ³ Figures, to nearest million, supplied by the Bank of Canada. ⁴ Figures based on estimates of population as given at p. 129; see headnote to this table. ⁵ Gross note circulation, less notes held by other chartered banks. ⁶ In January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada.

Coinage.—Under the Currency, Mint and Exchange Fund Act (R.S.C. 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents and 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins for the payment of any amount; in the case of silver coins for the payment of an amount up to \$10; nickel coins for payment up to \$5; and bronze coins up to 25 cents.

5.—Circulation of Canadian Coin, as at Dec. 31, 1943-52

NOTE.—The figures shown are of net issues of coin. Figures for 1901-25 are given in the 1927-28 Year Book, p. 858, and for 1926-42 in the 1946 edition, p. 956.

² Per capita figures

The Royal Canadian Mint.—The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. In 1931 (21-22 Geo. V, c. 48) it was constituted a branch of the Canadian Department of Finance and has since operated as the Royal Canadian Mint. From 1858 the British North American provinces, and later Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham. Before that date, coins were mainly British, United States and Spanish. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation and of British sovereigns and small coins struck under contract for Newfoundland and Jamaica.

Before 1914, only small quantities of gold bullion were refined, but during World War I the Mint came to the assistance of the British Government by establishing a refinery in which nearly 20,000,000 oz. t. of South African gold were treated on account of the Bank of England. The subsequent development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Fine gold produced from the rough bullion shipments received from the mines is purchased by the Mint and later delivered to the Bank of Canada for account of the Minister of Finance in bars of approximately 400 oz. t. each, or, in the case of those mines authorized to sell gold in the open market, the bullion is shipped to various domestic and foreign processors. The fine silver extracted from the rough gold is generally used for coinage purposes.

Subsection 2.—General Public Holdings of Certain Liquid Assets

The Bank of Canada has developed a presentation of statistics concerning the volume of money. This presentation shows not only currency and active bank deposits (formerly referred to as "money supply"), but also inactive chartered bank deposits and Government of Canada securities which, although not used to make payments, are forms in which the public holds its liquid funds. The series has been carried back to 1938 and provides a good approach to the problem of measuring changes in the volume of money under present-day conditions.

7.—General Public Holdings of Certain Liquid Assets, as at Dec. 31, 1938-52

1952.....	5,173	4,129	9,062	18,365

¹ Estimated aggregate minimum quarterly balances in chartered bank personal savings deposits in Canada plus non-personal notice deposits in Canada. ² Holdings of all investors, other than the Bank of Canada, chartered banks and Government of Canada accounts. Includes direct and guaranteed securities (including refundable taxes) at par. Direct debt includes both matured and unmatured issues outstanding, exclusive of sinking fund holdings; guaranteed debt is included on the basis of total unmatured issues outstanding; Newfoundland debt assumed by the Government of Canada has been included since June 1949. Foreign pay securities have been valued at official mid-rates of exchange to Sept. 30, 1950, and at market rates thereafter.

In measuring currency and active bank deposits, it is necessary to decide which categories of bank deposits should be classed as active and which, by their nature, should be regarded more appropriately as part of the public's other liquid asset holdings. Generally, it has been satisfactory to classify bank deposits as active if cheques may be drawn against them. In other countries this criterion has seemed to work fairly well because cheques may not be drawn against savings

deposits. In Canada, however, cheques are, in practice, drawn freely against savings deposits and this poses an awkward problem. To omit all savings deposits of chartered banks would ignore the obvious fact that, for many people, a savings account is an active chequing account which is very similar to a current deposit. On the other hand it is known from available information that, of the total amount on deposit in savings accounts in Canada, much the larger part is, in practice, inactive. Chartered banks pay interest on the minimum quarterly balances in personal savings accounts, i.e., on the sum that has been left undisturbed for the quarterly period; from the amount of interest that is actually paid on this basis as compared with the nominal rate of interest, it is apparent that the aggregate minimum quarterly balances in personal savings accounts are about five-sixths of the total of such deposits at the present time.

It is felt, therefore, that a more realistic account of monetary developments in Canada—and one more comparable with the usual presentation of similar statistics in other countries—is obtained by omitting the minimum quarterly balances in personal savings deposits and non-personal notice deposits from active money statistics. It has seemed preferable to exclude these deposits on the basis that they are inactive in practice rather than to include them on the grounds that they are potentially active because cheques may be issued against them.

The published returns of Canadian chartered banks include among assets "Cheques on Other Banks" which represents the amount of cheques that have been credited to the deposit account of the payee but not yet cleared against the deposit account of the drawer. To the extent of such items in 'float' there is, therefore, duplication in the figures of bank deposits. In Table 8, "Cheques on Other Banks" has been deducted from the figure of chartered bank deposits in order to eliminate this duplication.

Government deposits are given different treatment in different countries as far as volume-of-money statistics are concerned. In most cases, the commonly used figure of bank deposits excludes Government deposits and, on the whole, it appears preferable to exclude Government of Canada deposits from the Canadian active money figures.

¹ Note circulation excluding notes held by chartered banks together with total coin issued by the Mint, less coin held by the banks.

² Demand and notice deposits, deposits of Provincial Governments, United Kingdom and foreign banks; less 'float' deposits, that is, cheques on banks as shown in month-end returns.

³ Excludes Government of Canada, chartered bank and foreign deposits.

Section 3.—Commercial Banking

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in one historical sketch, which is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897, and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies from Confederation; the last insolvency occurred in 1923. A summary of the more important changes resulting from the revision of the Bank Act in 1944 is given in the 1946 Year Book, pp. 961-962.

Subsection 1.—Chartered Banks

Canadian commercial banks are "chartered" or licensed by the Federal Government and operate under one federal statute—the Bank Act (R.S.C. 1952, c. 12). In the period 1881-1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same (36 in 1881 and 1891, and 34 in 1901), but during the present century there has been in banking, as in industry, an era of amalgamations and the number of banks declined to 25 in 1913 and to 10 in 1931. At the same time, banking facilities increased and the banking business continued its rapid development.

An Act to incorporate an additional chartered bank, called the Mercantile Bank of Canada (2 Eliz. II, c. 67), was given Royal Assent on Mar. 31, 1953. This Bank, the main office of which is located at Montreal, has a capital stock of \$3,000,000 divided into 300,000 shares of the par value of \$10 each. The Bank commenced business on Dec. 7, 1953.

Combined Financial Statistics of Chartered Banks.—In order to afford a clear account of the nature of banking transactions in Canada, bank liabilities have been classified in Table 12 into two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four

groups, 'other assets' being included in the total. The relative rates of increase of capital and reserve funds may be noted in the table, also the great increase in the proportion of liabilities to the public to total liabilities and the gradually increasing percentage of liabilities to the public to total assets. The declining proportion of chartered bank notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times (*see* pp. 1128-1129).

12.—Assets and Liabilities of the Chartered Banks, 1943-52

NOTE.—These statistics are yearly averages computed from the twelve monthly returns in each year. Figures for 1867-1880 will be found in the 1938 Year Book, pp. 918-919; for 1881-1915 in the 1941 edition, pp. 815-816; for 1916-26 in the 1946 edition, pp. 963-964; for 1927-36 in the 1947 edition, pp. 1025-1026; and for 1937-42 in the 1952-53 edition, p. 1105.

Cheque Payments.—The monthly record of amounts of cheques charged to accounts at all banking offices situated in the clearing-house centres of Canada is available from 1924. The trend indicated by cheques cashed shows the occurrence of three major economic cycles since World War I. The first reached its peak in 1920 with the low point of the succeeding depression in 1922. The high point was next achieved in 1929, owing partly to economic conditions involving heavy stock speculation. The low point was reached in 1932 and, with the exception of a minor set-back in 1938, an upward trend has continued to the present time.

The amount of cheques cashed in the clearing-house centres of Canada advanced year by year from 1938 to a maximum of \$125,196,894,021 in 1952; this advance paralleled the upward movement in the payment of salaries and wages and the greater distribution of consumer goods through wholesale and retail outlets. The increase, amounting to 305 p.c. since 1938, was general in the five economic areas,

British Columbia showing the highest gain at 474 p.c. The Prairie Provinces came second, followed by the Atlantic Provinces, Ontario and Quebec. However, of the \$94,000,000,000 increase, Ontario and Quebec contributed \$64,000,000,000, or 68 p.c.

Thirty-one of the 35 clearing-house centres showed an advance in 1952 over 1951, although the magnitude of the gains varied. With the exception of Ottawa and three of the smaller Ontario cities, a new maximum was established in each centre. Payments at Toronto, the leading centre, increased 13.4 p.c., those at Montreal 8.7 p.c., Winnipeg 10.9 p.c. and Vancouver 11.9 p.c.

18.—Cheques Cashed at Individual Clearing-House Centres, 1948-52

¹ After January 1950, the chartered banks' liability for such of their notes as then remained outstanding was transferred to the Bank of Canada.

Net Profits of Individual Chartered Banks.—The chartered banks are, for the most part, nation-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with considerable accuracy the fluctuations of general business.

Subsection 2.—Government and Other Savings Banks

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Newfoundland, Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec, the Montreal City and District Savings Bank and La Banque d'Économie de Québec, established under federal legislation and reporting monthly to the Department of Finance. Other agencies for the promotion of thrift, through encouraging regular savings, are the co-operative credit unions.

Post Office Savings Bank.—The Post Office Savings Bank was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929.

22.—Financial Business of the Post Office Savings Bank, as at Mar. 31, 1948-53

NOTE.—Figures for earlier years will be found in the corresponding table of previous Year Books. Totals back to 1868 are given in the 1926, 1946 and 1951 editions, at pp. 833-834, 978, and 1051, respectively.

Provincial Government Savings Banks.—Institutions for the deposit of savings are operated by the Provincial Governments of Newfoundland, Ontario and Alberta.

Newfoundland.—The following is a summary financial statement of the Newfoundland Savings Bank for the years ended Mar. 31, 1951 and 1952:—

	1951	1952
Interest on investments, etc.....	739,489	765,752
Less interest on deposits.....	637,580	667,917
Less Expenses.....	40,236	42,692
Profit on sale of investments.....	2,865	2,093
Less Transfer to reserves.....	—	30,000
NET INCOME.....	64,598	37,236

The number of accounts increased from 28,799 at Mar. 31, 1951, to 31,601 at Mar. 31, 1952, and deposits from \$24,561,048 to \$24,875,733 in the same comparison. The interest rate on deposits of private individuals, trust funds and

estates is 3 p.c. per annum on accounts up to \$5,000, decreasing to 1½ p.c. per annum on accounts of over \$10,000; on deposits of corporations the rate is 1 p.c. per annum. A general reserve of \$1,137,911 is held.

Ontario.—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 session and the first branches were opened in March 1922. Interest at the rate of 1 and 1½ p.c. per annum, compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits at Mar. 31, 1953, were \$62,689,000, and the number of depositors was approximately 100,000. Twenty-one branches are in operation throughout the Province.

Alberta.—Savings deposits are accepted at 45 Provincial Treasury Branches throughout Alberta. The total of these deposits at Mar. 31, 1953, was \$18,977,705 made up of \$14,495,141 payable on demand and bearing interest at ½ of 1 p.c. to 1½ p.c. and \$4,482,564 payable one year after deposit and bearing interest at 1 p.c. to 2 p.c.

The Provincial Treasury has issued demand certificates bearing interest at 1½ p.c. or term certificates for one, two, three, four or five years, in denominations of \$25 and upwards, bearing interest at 2 p.c. for one or two years, 2½ p.c. for three or four years and 2½ p.c. for five years. The total amount in savings certificates at Mar. 31, 1953, was \$307,614 made up of \$129,764 in demand certificates and \$177,850 in term certificates. Deposits from the public for the purchase of such certificates were discontinued as from April 1951.

Other Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had at Mar. 31, 1953, a paid-up capital and reserve of \$7,000,000, savings deposits of \$186,887,958, and total liabilities of \$194,238,816. Total assets amounted to \$194,374,976, including over \$160,000,000 of federal, provincial and municipal securities. La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by 34 Vict., c. 7, had at Mar. 31, 1953, savings deposits of \$27,234,043 and a paid-up capital and reserve of \$3,000,000. Liabilities amounted to \$30,443,868 and total assets to \$30,886,522.

Table 23 shows the savings deposits in the Montreal City and District Savings Bank and La Banque d'Économie de Québec for the years ended Mar. 31, 1939-53.

23.—Deposits in the Montreal City and District Savings Bank and La Banque d'Économie de Québec, Years Ended Mar. 31, 1939-53

NOTE.—Figures for 1868-1926 are given in the 1926 Year Book, pp. 833-834, and for 1927-38 in the 1946 edition, p. 980.

Credit Unions.*—Credit unions are co-operative savings and loan associations through which members with a common bond of association pool their savings in order to make loans among themselves for "provident and productive" purposes.

* Prepared by J. E. O'Meara, Economics Division, Marketing Service, Department of Agriculture, Ottawa.

At the end of 1952, there were 3,335 credit unions in Canada distributed among the ten provinces. Membership numbered 1,250,000 and total assets amounted to approximately \$425,000,000. Loans amounting to \$154,000,000 were made during the year. The figures reported for 1952 were the highest on record and the increases in that year over 1951 were higher than in any other year.

Since Quebec was the first province to establish credit unions, the year 1900 marking the beginning, that Province has, of course, the greatest credit union development. Nearly one-third of all credit unions in Canada are in that Province. Also, because of the large rural population of Quebec, credit unions there are largely agricultural. Ontario follows Quebec in credit-union development and in that Province, as well as in British Columbia and Alberta, the establishment of unions among industrial workers is increasing rapidly. These three Provinces reported 563 industrial credit unions in 1952, which is 75 p.c. of all groups classified as industrial.

In 1952, the average savings per member in credit unions in Canada amounted to \$316.53, compared with \$235.44 in 1945. Quebec members had average savings of \$395.06, the highest reported, compared with \$71.03 per member in Newfoundland, the lowest reported.

Section 4.—Monetary Reserves

Bank of Canada Reserves.—The composition of Canadian gold reserves held by the Government is presented in the 1936 Year Book, p. 895, for the years 1905 to 1934. After March 1935 the gold reserves were held by the Bank of Canada, by authority of the Exchange Fund Act (1935, c. 60), effective in July 1935. Under the Exchange Fund Order of Apr. 30, 1940, the gold reserves of the Bank of Canada were transferred to the Exchange Fund Account and the requirement that the Bank should maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada was suspended.

Chartered Bank Cash Reserves.—Until March 1935, legal tender cash reserves in Canada were made up partly of Dominion notes, partly of gold coin and bullion, and subsidiary coin, including these forms of cash held by the banks and as deposits in the Central Gold Reserves. In so far as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject, so long as Canada was on the gold standard, to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments.

When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with, and notes of, the Bank of Canada and it was provided that, henceforth, the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada.

26.—Annual Averages of Cash Reserves of the Chartered Banks, 1943-52

NOTE.—Figures, to nearest million, supplied by the Bank of Canada. Cash reserves include notes and deposits with the Bank of Canada. Figures for the years 1926-42 are given in the 1946 Year Book, p. 960.

Section 5.—Foreign Exchange

Exchange Rates.—The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to 15/73 of the pound sterling; in other words, the pound was equal to \$4.866 in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of World War I. During the first 11 years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date to 1914, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under \$2 per \$1,000.

At the outbreak of World War I, the United Kingdom and Canada suspended the gold standard, and their currencies fell to a discount at New York. However, this discount was 'pegged', or kept at a moderate percentage, by sales of United States securities previously held in the United Kingdom, by borrowing in the United States and, after the United States entered the War, by arrangement with the United States Government. After the War, when the exchanges were 'unpegged', the British pound went as low as \$3.18 and the Canadian dollar as low as 82 cents at New York. In the course of the next year or two, exchange returned practically to par and the United Kingdom resumed gold payments in April 1925 as did Canada on July 1, 1926. Until 1928, the exchanges were within the gold points but in 1929 the Canadian dollar again fell to a moderate discount at New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals. Immediately on the outbreak of World War II in September 1939, the United Kingdom and other sterling countries introduced foreign exchange control, involving fixed buying and selling rates which were \$4.02½ and \$4.03½, respectively, in terms of the U.S. dollar. Meanwhile, the Canadian dollar declined gradually until Sept. 16, 1939, when the Government established the Foreign Exchange Control Board.* Fixed buying and selling rates were provided for United States funds and sterling at the outset, being \$1.10 and \$1.11, and \$4.43 and \$4.47, respectively. The former rates fixed the value of the Canadian dollar at 90.09 cents to 90.91 cents in terms of the U.S. dollar; this was approximately the market rate to which the Canadian dollar had fallen just prior to exchange control and, in terms of devaluation, represented a level midway between the U.S. dollar and sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to \$1.10½ and \$4.45, respectively, the Foreign Exchange Control Board's official rates remained unaltered until July 5, 1946. At this time, the rate on the U.S. dollar was restored to par with buying and selling rates for U.S. dollars at \$1.00 and \$1.00½ and sterling, \$4.02 and \$4.04. These rates continued in effect until Sept. 19, 1949, when, following a 30.5 p.c. reduction by the United Kingdom in the value of sterling to \$2.80 U.S. (which action was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds; sterling was quoted at new rates of \$3.07½ and \$3.08½, based on the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates, which had been in effect at varying levels since 1939, would be cancelled effective Oct. 2 and that rates of exchange would be determined by conditions of supply and demand for foreign currencies, i.e., by market trading within the framework of exchange control. Subsequently, the U.S. dollar fell to a level between \$1.04 and \$1.05 in terms of Canadian funds in early December 1950. After strengthening in the second quarter of 1951, it declined to between \$1.01 and \$1.04 in December 1951.

* The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in previous editions of the Year Book.

On Dec. 14, 1951, the Foreign Exchange Control Regulations were revoked by the Governor in Council and new Regulations were passed which exempted all persons and transactions from the various declaration and permit requirements of the Foreign Exchange Control Act, thus terminating exchange control in Canada. During 1952, the U.S. dollar declined gradually to an average of \$0.96 in Canadian funds in September and then rose slightly to an average of \$0.97 in December.

¹ Includes private holdings, exclusive of working balances, of \$98,000,000 at Dec. 31, 1939, and \$2,000,000 at Dec. 31, 1940.

² Excludes \$18,200,000 borrowed in the United States in August 1949 and set aside for the retirement on Feb. 1, 1950, of a security issue guaranteed by the Federal Government and payable at the holder's option in U.S. dollars.

PART II.—MISCELLANEOUS COMMERCIAL FINANCE

Section 1.—Loan and Trust Companies*

An outline of the development of loan and trust companies in Canada from 1844 to 1913 is given in the 1934-35 Year Book, p. 903. The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, ce. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, summary statistics of provincial companies have been supplied by those companies since 1922 and summary figures for the years 1951 and 1952 are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 95 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with the federally licensed companies.

* Revised under the direction of K. R. MacGregor, Superintendent of Insurance, Department of Insurance, Ottawa.

The statistics of Tables 2 and 3 refer both to those companies incorporated by the Government of Canada and by the provinces. Included in the statistics of federal companies, beginning with 1925, are data of loan and trust companies incorporated by the Province of Nova Scotia and brought by the laws of that Province under the examination of the Federal Department of Insurance, as well as data for trust companies in New Brunswick since 1934 and in Manitoba since 1938.

The progress of the aggregate of loan company business in Canada is indicated by the increase in the book value of the assets of all loan companies from \$188,637,298 in 1922 to \$303,306,362 in 1952. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$476,516,402 in 1952. In the former year, the total of estates, trust and agency funds administered amounted to \$1,077,953,643 and in 1952 to \$3,972,200,367.

Functions of Loan Companies.—The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings-department deposits. The extent of investments in mortgages by federal and provincial loan companies may be gauged by the following figures: total assets of such companies for the years 1951 and 1952 amounted to \$292,095,485 and \$303,306,362, respectively, which amounts include mortgage loans of \$186,508,636 and \$200,428,729, respectively, with resulting percentages of mortgages to total assets of approximately 64 p.c. and 66 p.c., respectively.

Functions of Trust Companies.—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment, but the investing and lending of such deposits and of actual trust funds are restricted by law.

Statistics of Loan and Trust Companies.—A summary of operations of provincial and federal loan and trust companies is given in Table 1. As a result of the nature of the operations of the latter companies, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters and the provincial figures represent much larger amounts than those of the federal companies.

The figures for federal loan companies include companies chartered by the Government of Nova Scotia which, by arrangement, come under inspection by the Federal Department of Insurance. The data for federal trust companies, likewise, cover companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba for the same reason.

Section 2.—Licensed Small Loans Companies and Licensed Money-Lenders

Incorporated by the Parliament of Canada are four companies that make small loans, usually not exceeding \$500 each, on the promissory notes of the borrowers and secured additionally in most cases by indorsements or chattel mortgages. While these companies, under their original charter powers, were permitted to make loans on the security of real estate, that power was withdrawn by the Small Loans Act, 1939 (R.S.C. 1952, c. 251).

Under legislation that came into force on Jan. 1, 1940, small loans companies and money-lenders licensed thereunder, making personal loans of \$500 or less, are limited to a rate of cost of loan not in excess of 2 p.c. per month on outstanding balances, and unlicensed lenders to a rate of 12 p.c. per annum, including interest and charges of every description.

5.—Assets and Liabilities of Small Loans Companies Chartered by the Federal Government, as at Dec. 31, 1946-51

NOTE.—Figures for 1928-32 are given in the 1942 Year Book, p. 838; for 1933-38 in the 1946 edition, p. 988; and for 1939-45 in the 1951 edition, p. 1062.

¹ Includes business other than small loans. ² Includes taxes.

³ Includes \$5,515 premium on capital stock.

⁴ Includes \$12,570 premium on capital stock.

The small loans companies chartered by the Federal Government showed a substantial increase in business for 1951 as compared with the previous year. The number of loans made to the public during the year increased from 521,701 to 606,468 or by 16 p.c. and the amount of such loans rose from \$105,746,067 to \$127,072,745. The average loan was approximately \$210 in 1951 compared with \$203 in 1950. At the end of 1951, loans outstanding numbered 389,630 for an amount of \$61,133,863 or an average of \$157 per loan.

Licensed Money-Lenders.*—In addition to the above-mentioned small loans companies, 57 licensed money-lenders furnished annual statements of their business showing, for 1951, total assets of \$30,570,466 of which balances of small loans amounted to \$8,126,043, other balances to \$20,980,983, bonds, debentures and stocks to \$316,702, real estate to \$104,368, cash to \$483,746 and other assets to \$558,624. Liabilities amounted to \$30,570,466, of which borrowed money accounted for \$21,397,938 and paid shares and partnership capital for \$3,952,842. Loans made during 1951 numbered 73,706 for an amount of \$15,866,101, an average of \$215 per loan. At the end of 1951 there were 53,329 loans outstanding with a value of \$8,126,043. Of the loans made, 60 p.c. were between \$100 and \$300 and 13 p.c. were between \$400 and \$500.

Section 3.—Sales of Canadian Bonds†

Canadian borrowers, whether governments or corporations, sold \$1,985,239,490 in new bond issues during the year 1952, which represented an increase of \$335,028,253 over the total of \$1,650,211,237 sold in 1951 but a decrease of \$1,168,200,963 from the all-time total of \$3,153,440,453 sold in 1950. Comparative totals for such sales can be traced in previous editions of the Year Book through the periods of two world wars and the post-war years to the conclusion of financing in 1951.

In relation to these totals, it should be noted that the 1952 aggregate includes sales of Canada Savings Loan, Series VII, to Nov. 30, 1952, only, the latest figure available at time of writing. On the other hand, figures for previous years include totals for the entire savings loans to the closing dates in the subsequent years (see Table 6). When complete figures are available for the Savings Loan of 1952, therefore, the total aggregate financing for that year will be somewhat larger.

For purposes of analysis, the 1952 total of \$1,985,239,490 may be classified as follows: federal, \$787,772,450; provincial and guaranteed, \$426,973,000; municipal, \$196,955,040; and corporation, \$573,539,000. Of the provincial and guaranteed total at \$426,973,000, the amount of \$216,100,000 represented direct issues and the amount of \$210,873,000 was for guaranteed financing, such as hydro bonds and municipal issues guaranteed by provincial governments. Of the municipal total at \$196,955,040, the amount of \$147,690,940 represented direct issues and the amount of \$49,264,100 represented parochial and miscellaneous issues, borrowed mainly for educational and hospital purposes.

There was a noticeable decline in the volume of Canadian issues placed on the United States market in 1952. A total of \$284,650,025 was sold in that year compared with \$384,023,000 in 1951, a decline of \$99,372,975. Reasons for this decline and a study of the relative merits of domestic and United States markets for Canadian

* Further details are given in the Department of Insurance report, *Small Loans Companies and Money-Lenders*, for the year ended Dec. 31, 1951.

† Prepared by E. C. Gould, Financial Editor, *The Monetary Times*.

issues were interesting aspects of bond sales during the period. Although borrowing could still be effected at lower rates in the United States, the initial exchange loss, effective after the first quarter of 1952, tended to reduce the amount of New York pay issues. In addition, financing of Canadian issues in the United States during the entire year was influenced by an indication of more expensive U.S. dollars during the repayment period.

From a study of Table 7, it will be noted that federal financing in 1952 increased by \$193,130,050 over the previous year. This increase was caused principally by the federal borrowing of \$450,000,000 in October which was purchased by the Bank of Canada. The one issue, plus the Savings Loan total of \$337,772,450, accounted for the entire amount (exclusive of short-term financing) of \$787,772,450 floated by the Federal Government in 1952.

Federal short-term financing of less than one year amounted to \$3,875,000,000 in 1952 but is not included in Table 7 because of its limited distribution. Such financing included Treasury Bills, Treasury Notes and Deposit Certificates. If the total of short-term financing is added to the total of federal long-term financing, as is done in some reports of Canadian bond sales, the grand total of federal borrowing in 1952 amounted to \$4,662,772,450 and the grand total of all bond financing in Canada amounted to \$5,860,239,490.

In 1952, direct provincial flotations totalled \$216,100,000, a decrease of \$119,712,000 from the \$335,812,000 total for the previous year. With the exception of the Province of Alberta, however, all provinces entered the bond market in 1952, as follows:—

<u>Month</u>	<u>Province</u>	<u>Amount</u>	<u>Month</u>	<u>Province</u>	<u>Amount</u>
January.....	Manitoba.....	\$10,000,000	September....	Manitoba.....	\$ 5,000,000
February.....	British Columbia....	30,000,000	September....	Manitoba.....	10,000,000
February.....	Quebec.....	12,600,000	November.....	Prince Edward Island	1,500,000
February.....	Saskatchewan.....	20,000,000	November.....	Quebec.....	25,000,000
March.....	Nova Scotia.....	12,000,000	December.....	Quebec.....	15,000,000
April.....	New Brunswick.....	10,000,000			
June.....	Ontario.....	55,000,000	TOTAL.....		<u>\$216,100,000</u>
July.....	Newfoundland.....	10,000,000			

In contrast to the decrease in direct provincial financing, the total of \$210,873,000 for provincial guaranteed financing in 1952 represented a very considerable increase of \$177,153,000 over the total of \$33,720,000 for 1951. The increase was principally attributable to the flotation of three issues of The Hydro-Electric Power Commission of Ontario, totalling \$125,000,000, and a \$50,000,000 issue of the Hydro-Electric Commission of Quebec. In addition, however, the 1952 total was increased by a number of municipal issues that were guaranteed by the Provinces. Direct municipal bond financing totalled \$147,690,940 in 1952, exclusive of a total of \$49,264,100 for parochial and miscellaneous purposes. These two totals compared with \$196,438,916 and \$37,967,921, respectively, in 1951.

The largest single amount borrowed by any one municipality during 1952 was represented by a flotation of the City of Montreal for \$15,859,000 in May and sold in the United States. Other municipal borrowings in excess of \$3,000,000 were: the City of Montreal, \$4,129,000 (February); the City of Vancouver, \$7,000,000 (March); the City of Toronto, \$10,774,000 (May); the City of Hamilton, \$3,120,473 (May); the City of Montreal, \$4,000,000 (June); and the City of Vancouver, \$3,825,000 (November).

During 1952, corporate financing totalled \$573,539,000, which was an increase of \$121,909,000 from the \$451,630,000 total of 1951. Such increase reflected the continued high value of new capital investment in plant and equipment that has characterized the Canadian economy in the post-war years. Many of the corporation issues were in the form of convertible debentures which were offered to the public and quickly subscribed.

The largest single corporate bond issue in 1952 was for \$90,000,000 which the Aluminum Company of Canada sold in the United States market to help finance the Company's expansions in British Columbia and Quebec. Other large corporate borrowers were: the St. Lawrence Corporation, Simpsons Limited, General Motors Acceptance Corporation, Sherritt Gordon Mines, Noranda Mines, British American Oil, Royalite Oil and Canadian Oil.

The largest issue in 1952 of any concern engaged in the transportation industry was the \$35,000,000, 17-year, 4 p.c., convertible trust bonds offered by the Canadian Pacific Railway in December. In addition, issues of equipment trust certificates were offered by the Provincial Transport Company and the Canadian General Transit Company at \$1,800,000 and \$1,500,000, respectively. Since the Canadian National Railways made an arrangement to have funds provided by the Government of Canada, it was not, as in the years prior to 1951, a large borrower in the open market.

The *Monetary Times* records indicate that two federal issues (excluding all short-term financing), 25 provincial and guaranteed issues, 589 municipal issues (including parochial and miscellaneous) and 77 corporation issues were placed in 1952. For 1951, the same records indicate the placement of two federal issues, 26 provincial and guaranteed issues, 564 municipal issues and 79 corporation issues. Thus, a grand total of 693 issues were sold in 1952 compared with 671 in 1951.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as fire, life and casualty. Most companies operate under Federal Government registration although some have provincial licences only. Also, many fraternal orders and societies are engaged in this kind of business. An extended treatment of the salient features of the legislation covering insurance in general and the fields of federal and provincial jurisdiction will be found in the 1941 Year Book at pp. 844-846. A special article in the 1942 Year Book, pp. 842-846, outlines the developments in fire and casualty insurance in Canada between 1931 and 1940, consequent upon the enactment of the three Insurance Acts of 1932, while another article on insurance as it affects the balance of international payments appears at pp. 870-871 of the same edition. The 1947 Year Book, at pp. 1064-1074, includes a special article entitled "Insurance in Canada during the Depression and War Periods".

Section 1.—Fire Insurance

In Canada, fire insurance began with the establishment of agencies by British fire insurance companies. These, situated usually at the seaports, were operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given in the 1941 Year Book, pp. 846-847.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1952, shows that, at that date, there were 281 fire insurance companies under federal registration; of these, 69 were Canadian, 84 were British and 128 were foreign

* Material in this Chapter, except as otherwise indicated, has been revised under the direction of K. R. MacGregor, Superintendent of Insurance, Department of Insurance, Ottawa.

companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 75 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

Subsection 1.—Total Registered Fire Insurance in Force in Canada

Of the total amount of insurance effected in Canada during each year, a part is sold by the companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation but may be allowed to sell insurance in other provinces. As shown in Table 1, companies under Federal registration account for approximately 92 p.c. of the insurance in force.

Subsection 2.—Operational Statistics of Fire Insurance Companies under Federal Registration

The trend in the average rate payable for fire insurance has been generally downward, although the increased fire losses have had the effect of checking that tendency in certain recent years. The increase in value of insurable buildings and their contents tends to increase fire insurance premiums despite the trend of the average rate.

2.—Fire Insurance, by Companies Operating under Federal Government Registration, Decennially 1880-1940 and 1941-52

NOTE.—Figures for 1889-1900 are given in the 1939 Year Book, p. 973, and for 1901-39 in the 1942 edition, pp. 847-848.

Subsection 3.—Finances of Fire Insurance Companies under Federal Registration

Tables 5 to 7 show the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada from 1948 to 1952. The majority of fire insurance companies also transact casualty insurance dealt with in Section 3 of this Chapter. Totals only are given here because it is impossible for such companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted. Table 28, p. 1182, gives similar information for registered companies whose transactions are confined to casualty insurance.

Subsection 4.—Fire Losses

Fire Losses.—The information in Tables 8 to 11, which deals with the loss of property and life caused by fire, has been summarized from the Statistical Bulletin of the Association of Canadian Fire Marshals and the Dominion Fire Prevention Association, prepared by the Dominion Fire Commissioner.

8.—Fire Losses in Canada, 1941-52

NOTE.—Figures for 1926-40 are given in the 1947 Year Book, p. 1078. Earlier figures from 1898 may be obtained from the Department of Insurance.

Year	Fires Reported	Property Loss ¹	Loss per Capita	Deaths by Fire	Year	Fires Reported	Property Loss ¹	Loss per Capita	Deaths by Fire

Section 2.—Life Insurance

Life insurance in force in Canada, in companies registered by the Federal Government, was over \$19,090,000,000 at the end of 1952, an increase of over \$1,855,000,000 during the year. There was not only an increase in new business, but

also a greater stability in business written compared with earlier years. The effect of these factors is reflected in the ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year.

Year	Net in Force at Beginning of Year	Net Increase in Force for the Year	Per- centage Gain
	\$	\$	
1930.....	6,157,000,000	335,000,000	5.4
1935.....	6,221,000,000	38,000,000	0.6
1940.....	6,776,000,000	199,000,000	2.9
1945.....	9,139,000,000	612,000,000	6.7
1946.....	9,751,000,000	1,061,000,000	10.9
1947.....	10,812,000,000	1,088,000,000	10.1
1948.....	11,900,000,000	1,205,000,000	10.1
1949.....	13,105,000,000	1,303,000,000	9.9
1950.....	14,409,000,000	1,337,000,000	9.3
1951.....	15,746,000,000	1,490,000,000	9.5
1952 ^a	17,236,000,000	1,855,000,000	10.8

Subsection 1.—Total Registered Life Insurance in Force in Canada

In addition to the business transacted by life insurance companies registered by the Federal Government, a considerable volume of business is also transacted by companies licensed by the provinces. Table 12 summarizes the volume of business transacted by Canadian, British and foreign life insurance companies and fraternal societies, whether registered by the Federal Government or licensed by the provinces.

12.—Life Insurance Transacted in Canada, 1952

Subsection 2.—Operational Statistics of Life Insurance Companies under Federal Registration

The net life insurance in force in all companies with federal registration was only \$35,680,082 in 1869 while in 1952 it was \$19,090,630,039.* The amount per capita of the estimated population of Canada has more than doubled since 1941—evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. Notable also is the fact that in this field British companies, the leaders in 1869, have fallen far behind Canadian and foreign companies.

13.—Life Insurance in Force and Effected in Canada by Companies under Federal Government Registration, Decennially 1880-1940 and 1941-52

NOTE.—Figures for the years 1869-1900 are given at p. 958 of the 1938 Year Book, and for the years 1901-39 at p. 855 of the 1942 edition. Statistics of fraternal society insurance, excluded here, are given at pp. 1173-1175.

¹ Based on estimates of population given at p. 129.

Life insurance business was transacted in Canada, during 1952, by 60 active companies with federal registration, including 31 Canadian, six British and 23 foreign companies. In addition to these active companies, there were seven British and three foreign companies writing little or no new insurance, their business being confined largely to the policies already on their books, and two foreign companies which were registered in 1951 and 1952 but had written no business in Canada.

The operations analysed in the tables of this Subsection, with the exception of Table 17, include only those companies with federal registration and are exclusive of fraternal organizations and provincial licensees. However, as indicated in Table 12, operations of the companies included account for almost 94 p.c. of the life insurance in force in Canada.

* This total does not include fraternal insurance.

Subsection 3.—Finances of Life Insurance Companies under Federal Registration

The financial statistics of Tables 18, 19 and 20 cover only life insurance companies with federal registration and do not include fraternal organizations and provincial licensees. In the case of British and foreign companies, the figures apply to their assets, liabilities and operations in Canada only but, in the case of Canadian companies, assets and liabilities, income and expenditure arise, in part, from business abroad.

Subsection 4.—Life Insurance Effected through Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 21 gives statistics of life insurance effected through fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The statistics of Table 21, at pp 1174-75, relate to the 16 Canadian societies reporting to the Department of Insurance of the Federal Government, of which only one does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not previously been licensed by the provinces have since obtained federal authority to transact business. Of both classes of societies, 32 transacted business in Canada during 1952; two of the societies do not grant life insurance benefits.

Subsection 5.—Life Insurance in Force Outside Canada by Registered Canadian Companies

Tables 22 and 23 give summary statistics of insurance in force as at Dec. 31, 1951, in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars, mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. Approximately 65 p.c. of all such business in force was written in United States currency and 20 p.c. in sterling. From another standpoint, approximately 29 p.c. was written in currencies of Commonwealth countries outside Canada, and 71 p.c. in currencies of foreign countries.

Canadian life insurance companies, operating under Federal Government registration, at Dec. 31, 1951 had life insurance in force amounting to \$5,528,942,066 in countries outside Canada. Insurance in force in currencies other than Canadian amounted to \$5,471,556,442 and the difference between these figures is, presumably, the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the Commonwealth and foreign investments of Canadian life insurance companies as at Dec. 31, 1951, amounted to \$1,748,300,352. Since the business in force in Canada of these companies at Dec. 31, 1951, amounted to \$11,807,786,335, the total business on their books, Canadian and non-Canadian, amounted to \$17,336,728,401. Thus, over 31 p.c. of the total business in force was outside Canada.

Subsection 6.—Total Registered Life Insurance in Canada and Business of Canadian Organizations Abroad

Table 24 summarizes the business outside Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 12, p. 1167, total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained. Again, adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of Canadian organizations; this total is shown in Table 25.

24.—Business of Registered Canadian Life Companies and Fraternal Societies Abroad, 1952¹

NOTE.—Figures for business in Canada will be found in Table 12, p. 1167.

Section 3.—Casualty Insurance

The growth of casualty insurance business has been steady since 1875. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam-boiler insurance—the only four classes of casualty insurance then transacted—was 5, 3, 1 and 1, respectively. The report for the year 1952 shows that casualty insurance in Canada now includes various forms of accident and 25 other classes of insurance transacted by companies with Federal Government registration. In 1880, 10 companies transacted casualty insurance but, in 1952, such insurance was issued by 302 companies, of which 75 were Canadian, 79 British and 148 foreign; of these, 215 companies also transacted fire insurance. In addition, 19 fraternal orders or societies conducted accident and sickness insurance as well as life insurance business and three fraternal orders or societies carried on accident or sickness insurance only.

Table 27 shows the division of business in this field between Federal Government registrations and provincial licensees and indicates that, as in the cases of fire and life insurance, the bulk of the business (about 90 p.c. in this case) is transacted by companies with Federal Government registration.

Since, as indicated above, most of the companies carrying on casualty insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditure are included in the financial statistics of fire insurance companies given in Section 1, Subsection 3, of this Chapter. Table 28, p. 1182, gives corresponding figures for total casualty business of Canadian companies, and the casualty business in Canada of British and foreign companies, whose transactions are confined to insurance other than fire and life. In 1952, there were 18 Canadian, 5 British and 64 foreign companies whose operations were limited to the same field.

During the war years, automobile insurance showed a favourable experience with a loss ratio of around 45 p.c. This ratio was slightly lower than for the pre-war years, the result of lessened traffic but, since the end of the War, the trend has been less favourable; in 1952 the ratio stood at about 55 p.c.

Hail insurance in 1951 showed a loss ratio of 41 p.c. and in 1952 this had increased to 54 p.c.

Marine insurance showed a very large increase in Canada during the war years and substantial profits resulted. The results for 1941 to 1952 were as follows:—

Year	Premiums	Claims Incurred	Under-writing Profits
	\$	\$	\$
1941.....	6,011,922	2,781,190	1,694,470
1942.....	14,295,543	7,983,963	3,855,415
1943.....	10,061,059	4,931,286	3,449,873
1944.....	6,754,361	2,172,418	3,243,889
1945.....	5,978,274	2,995,704	1,704,367
1946.....	5,655,392	2,232,701	2,084,412
1947.....	7,932,404	4,529,161	1,031,313
1948.....	7,986,658	3,468,045	2,466,397
1949.....	7,715,671	4,327,555	1,342,088
1950.....	7,592,558	3,098,086	2,394,336
1951.....	8,908,639	4,670,972	1,716,201
1952.....	9,201,477	5,627,211	1,130,828

This class of insurance will, no doubt, continue to figure more largely in the business of companies in post-war years than it did before 1939.

Section 4.—Government Insurance

In addition to the insurance provided by private insurance companies, various types of government insurance schemes have been adopted in recent years by the Federal and Provincial Governments.

Information on unemployment insurance, health insurance, export credits insurance, etc., will be found in the Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Veterans Insurance.*—The Veterans Insurance Act which came into force on Feb. 20, 1945, provides that the following persons may contract with the Government of Canada for life insurance, usually without medical examination, during the periods of eligibility shown:—

Eligibility arising out of Service in World War II:

- (a) Veterans, and others deemed by Statute to be veterans.
- (b) Members of the regular Forces who served during the War and were not discharged; Merchant Seamen if eligible to receive a Special Bonus or War Service Bonus; widows of veterans or widowers who did not have Veterans Insurance.

Eligibility arising out of Service in the Special Force since July 5, 1950:

- (c) Persons who served on the strength of the Special Force in a Theatre of Operations and who have been discharged; persons who were awarded pensions under the Pension Act as a result of service in the Special Force.
- (d) Widows of persons who were on service in a Theatre of Operations and who died during Special Force Service.

Applications must be approved by:

Dec. 31, 1954 or 10 years after discharge, whichever is later.

Dec. 31, 1954.

3 years after discharge.

Dec. 31, 1954.

* Revised by C. F. Black, Superintendent, Veterans Insurance, Department of Veterans Affairs, Ottawa.

The amount of insurance may be any multiple of \$500 up to a maximum of \$10,000. The plans of insurance available are 10-payment life, 15-payment life, 20-payment life, and life with premiums payable until age 65 or age 85. The policies are non-participating.

Premiums on veteran's insurance may be paid monthly, quarterly, semi-annually or annually. They may be paid in cash or from re-establishment credit or by deduction from any pension granted under the Pension Act. The policy contracts include a waiver-of-premium disability provision. No extra premiums are charged for residence, travel or occupational hazards.

At the end of the second policy year a liberal cash value is available. It may be used alternatively to provide reduced paid-up insurance or extended term insurance. A veteran's insurance policy is not assignable, nor is a loan value granted.

The maximum amount of insurance money that will be paid in a lump sum at death is \$2,000; the balance must be paid to the beneficiary as an annuity certain or as a life annuity with or without a guaranteed period.

29.—Summary Statistics of Veterans Insurance, Years Ended Mar. 31, 1949-53

Year Ended Mar. 31—	Insurance Issued During Year		Insurance in Force at End of Year		Death Claims Approved During Year

1952	2,302	8,322,500	26,985	79,115,734	158	346,500
1953	2,167	7,849,000	27,731	81,826,281	186	530,000

Provincial Insurance Schemes.—The Province of Saskatchewan conducts fire, fidelity and surety insurance but not life insurance. This is effected under the terms of the Saskatchewan Government Insurance Act, 1944.

In the Province of Alberta, life insurance is provided through the Life Insurance Company of Alberta, a Crown company that is not an emanation from the Provincial Government. Similarly, another Crown company, the Alberta General Insurance Company, provides all other kinds of insurance except life, accident and sickness. The Alberta Hail Board provides farmers with insurance for their crops against damage by hail. Additional information may be obtained from:—

(a) The Superintendent of Insurance,
Insurance Branch,
Department of the Provincial Secretary for Saskatchewan,
Regina, Saskatchewan.

(b) The Superintendent of Insurance,
Department of the Provincial Secretary for Alberta,
Edmonton, Alberta.

CHAPTER XXVII.—DEFENCE OF CANADA

CONSPECTUS

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—THE ARMED SERVICES AND DEFENCE RESEARCH*

Section 1.—The Department of National Defence

The Minister of National Defence exercises control over and management of the Canadian Armed Forces, the Defence Research Board and other matters relating to National Defence. Under his direction, the Services are commanded by their respective Chiefs of Staff and the Defence Research Board by its Chairman. A Chairman of the Chiefs of Staff Committee, appointed in 1951, is responsible for the co-ordination of the training and operation of the Canadian Armed Forces.

The civilian administrative organization, headed by the Deputy Minister, is constituted on a functional basis. The Deputy Minister maintains a continuing review and control over the financial aspects of operational policy, logistics and personnel and administration.

To achieve a common approach to problems, a number of committees within the Department meet at regular intervals to consider and advise on joint issues:—

- (1) **Defence Council.**—Composed of the Minister of National Defence (Chairman), the Parliamentary Assistant to the Minister, the Deputy Minister, the three Chiefs of Staff and the Chairman of the Defence Research Board, the purpose of the Defence Council is to advise the Minister on administrative matters.
- (2) **Chiefs of Staff Committee.**—This Committee is composed of the Chairman of Chiefs of Staff, the three Chiefs of Staff of the Services, and the Chairman of the Defence Research Board; the Deputy Minister, the Secretary to the Cabinet and the Under Secretary of State for External Affairs attend when required. Its purpose is to maintain a continuous review of all operational problems. A number of subcommittees consider various aspects of operational problems and report to the parent committee.

* Revised under the direction of C. M. Drury, C.B.E., D.S.O., Deputy Minister, Department of National Defence, Ottawa.

- (3) **Personnel Members Committee.**—Composed of the Chief of Naval Personnel, Adjutant-General, Air Member for Personnel, Assistant Deputy Minister (Personnel and Administration), Assistant Deputy Minister (Finance), and a representative of the Chairman of the Defence Research Board, the purpose of this Committee is to examine personnel problems of the three Services with the general aim of achieving uniform personnel policies. Various aspects of personnel problems are considered by subcommittees which report to the parent committee.
- (4) **Principal Supply Officers Committee.**—This Committee is composed of the Chief of Naval Technical Services, the Quartermaster General, the Air Member for Technical Services, Assistant Deputy Minister (Requirements) and a representative of the Chairman of the Defence Research Board. Its purpose is to consider all logistical problems, various aspects of which are considered by subcommittees that report to the parent committee.
- (5) **Defence Supply Panels.**—Twelve panels, composed of a representative from each of the Services as well as representatives of the Deputy Minister, of Inspection Services and of the Department of Defence Production, maintain a continuous review of procurement problems and consider various aspects of the procurement of equipment such as ammunition, armament, aircraft, etc., for the Department of National Defence by the Department of Defence Production.

Liaison Abroad.—The Chairman of Chiefs of Staff, the Canadian Military Representative in the North Atlantic Treaty Organization, is responsible for co-ordinating all military NATO matters and acts as military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation on defence, Canada also maintains: (1) Canadian Joint Staff (Washington) representing the three Services and the Defence Research Board; (2) Canadian Joint Staff (London) representing the three Services and the Defence Research Board; and (3) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence which is composed of representatives from the two countries.

Total Strength and Rates of Pay and Allowances.—The strengths of the active forces of the three Services have been increased to keep pace with defence objectives and commitments. At Mar. 31, 1953, the total active force strength was 104,427 composed of: Navy, 15,546; Army, 48,458; and Air Force, 40,423. The strength of the reserve elements of the three Services was 58,071.

The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates of pay and allowances are given in Table 1, p. 1186.

The Regular Officer-Training Plan (ROTP).—The object of the Regular Officer-Training Plan is to train selected high-school and university students for regular commissions in a branch of the active forces. Students are enrolled as officer cadets and subsidized at one of the Canadian Services Colleges or at a university for a period not exceeding four years. A fifth year is provided for students who take the preparatory year at the Collège Militaire Royal de Saint-Jean. Practical training is given during the summer months.

1.—Monthly Rates of Pay and Allowances for Members of the Active Forces, as at May 1, 1953

Royal Canadian Navy	Canadian Army	Royal Canadian Air Force	Basic Pay	Subsistence Allowance		Ration Allowance	Marriage Allowance	Separated Family's Allowance (with children)	
				Personnel not in Receipt of Marriage Allowance	Personnel in Receipt of Marriage Allowance			Personnel in Receipt of Subsistence Allowance	Personnel not in Receipt of Subsistence Allowance
			\$	\$	\$	\$	\$	\$	\$
Ordinary Seaman (under 17 years).	Private (under 17 years).	Aircraftman 2 (under 17 years).	44	61	—	30	—	—	—
Ordinary Seaman (entry).	Private (entry).	Aircraftman 2.	87	61	91	30	30	61	91

Subsection 1.—The Royal Canadian Navy

Organization.—Naval Headquarters at Ottawa conducts the planning and policy for administration and training of the regular and reserve forces of the Royal Canadian Navy. Subject to this authority, the flag officers on each coast and the Commanding Officer, Naval Divisions at Hamilton, Ont., exercise control in their respective Commands. Ships of the Royal Canadian Navy are based at the Atlantic and Pacific stations. Subsidiary units are the 22 Naval Divisions in cities across the country which serve as shore-training establishments for the naval reserve.

At the end of the fiscal year (March 1953), a light fleet aircraft carrier, two six-inch gun cruisers, eight destroyers, three frigates, four Algerine escorts, an apprentice trades training ship, two gate vessels and a number of smaller craft were in commission, while 54 major war vessels were in reserve. There were 2,173 officers and 13,373 men in the regular force of the Navy and 1,378 officers and 3,947 men and women in the reserve force.

Considerable progress was also made by the NATO navies in moulding the organization for the defence of the North Atlantic Ocean under a Supreme Allied Naval Commander; Canadian naval officers appointed to his staff work side by side with naval officers of other NATO countries. Ships of the Royal Canadian Navy continue to participate in combined NATO training exercises.

Operations at Sea, 1952-53.—During the fiscal year, the Atlantic Command gradually undertook the major share of the Royal Canadian Navy commitment to maintain three destroyers in Korean waters. Of the ships in the Atlantic Command, *Nootka* completed her second tour, *Huron* and *Iroquois* completed their first, while *Haida* commenced her first. In the Pacific Command, *Athabaskan* commenced her third tour, *Crusader* her first, and *Cayuga* completed her second.

These ships continued to be employed both as part of a carrier screening force and in blockading the enemy coast. The latter involved the bombardment of enemy concentrations and installations in addition to the interception of enemy junk traffic. Enemy resistance increased during the year and the Royal Canadian Navy suffered its first casualties in the Korean theatre when *Iroquois* was hit by a shore battery.

Magnificent participated in three NATO exercises, *Castinets* and *Mainbrace* in United Kingdom and North Sea waters and *Emigrant* in the Atlantic, during the period June to October 1952. During the same period, *Emigrant* also joined the British Mediterranean Fleet for exercises and visits to Mediterranean ports. *Quebec* also assisted in exercises, after completing training cruises to St. Lawrence River ports and to the United Kingdom. *Crescent*, *La Hullose* and *Swansea* in the Atlantic and *Beacon Hill* and *Antigonish* in the Pacific carried out training cruises from May to September 1952. Visits to United Kingdom, European and Mediterranean ports were made by ships of the Atlantic Command, while the ships in the Pacific visited West Coast ports and Hawaii.

Extensive anti-submarine training was afforded to East and West Coast ships throughout the year by United Kingdom and United States submarines.

Training Ashore.—Two major shore establishments, *Stadacona* at Halifax and *Naden* at Esquimalt, are maintained by the Royal Canadian Navy to serve as drafting depots, training schools and centres, and to provide the accommodation facilities required by the fleets based on both coasts. In each of these establishments, schools and training centres afford instruction for both officers and men of the RCN and RCN(R) in communications, gunnery, torpedo, anti-submarine, navigation direction, electrics and electronics, marine engineering, seamanship, naval ordnance, supply and secretariat duties, diving, damage control and fire-fighting.

A third major shore establishment is the RCN Air Station *Shearwater*, at Dartmouth, N.S., which provides training facilities, shore accommodation and storage for naval aviation.

H.M.C.S. *Cornwallis* at Cornwallis, N.S., is devoted exclusively to training and its organization and program are arranged accordingly. The course for new entries extends over 19 weeks. During this period a new entry receives basic instruction in naval subjects, studies mathematics and English, and participates in an extensive program of physical training, sports and recreation.

In February 1952, the first draft of French-speaking recruits arrived at the Basic Training School, H.M.C.S. *Montcalm*, at Quebec, Que., for initial training prior to commencing courses in H.M.C.S. *Cornwallis*. All regular-force recruits whose mother tongue is French will undergo preliminary training at this school in professional naval subjects including seamanship, boatwork, organization, parade training, supply duties, torpedo anti-submarine, engineering, communications and naval history. Instruction is given in French and in English, with emphasis on the use of naval terminology. The program is designed to enable new entries from the Basic Training School to join classes in H.M.C.S. *Cornwallis* at an appropriate stage in their training.

In August 1952, the Navy began a program to train naval apprentices between the ages of 16 and 19. The apprentices enrol for seven years. The total training program lasts for 39 months. The first group began technical training in January 1953 aboard H.M.C.S. *Cape Breton*, an escort maintenance vessel, at Halifax, N.S. Apprentices are trained as engine-room artificers, shipwrights, electrical technicians, air artificers and armourers. Upon graduation, apprentices join the fleet as Petty Officers second class.

Officers of the Royal Canadian Navy come from four main sources: (1) Canadian Services colleges; (2) universities; (3) commissioning from the ranks of the active force; and (4) short-service appointments.

Ship Construction, Refit and Modernization.—Work is progressing on the construction of anti-submarine escort vessels; three vessels will be completed late in 1954 and others are in various stages of construction. Four coastal minesweepers were scheduled for completion during 1953 and others are under construction. Work continues on other miscellaneous and harbour craft. The extensive conversion of one destroyer as a prototype for conversion of other destroyer escorts has been completed and the conversion of another destroyer has commenced. Rearmament has been completed on four destroyers and two others will be modernized by early 1954. Work on the 16 frigates, 18 Bangor class minesweepers and two diesel minesweepers brought out of strategic reserve for refitting and modernization continues and is expected to be completed by the spring of 1954.

Royal Canadian Navy (Reserve).—Naval Divisions are established in the following centres:—

St. John's, Nfld., H.M.C.S. *Cabot*
 Cornerbrook, Nfld., H.M.C.S. *Caribou*
 Charlottetown, P.E.I., H.M.C.S. *Queen Charlotte*
 Halifax, N.S., H.M.C.S. *Scotian*
 Saint John, N.B., H.M.C.S. *Brunswick*
 Quebec, Que., H.M.C.S. *Montcalm*
 Montreal, Que., H.M.C.S. *Donnacona*
 Ottawa, Ont., H.M.C.S. *Carleton*
 Toronto, Ont., H.M.C.S. *York*
 Kingston, Ont., H.M.C.S. *Cataragui*
 Hamilton, Ont., H.M.C.S. *Star*

Windsor, Ont., H.M.C.S. *Hunter*
 London, Ont., H.M.C.S. *Prevost*
 Port Arthur, Ont., H.M.C.S. *Griiffin*
 Winnipeg, Man., H.M.C.S. *Chippawa*
 Regina, Sask., H.M.C.S. *Queen*
 Saskatoon, Sask., H.M.C.S. *Unicorn*
 Calgary, Alta., H.M.C.S. *Tecumseh*
 Edmonton, Alta., H.M.C.S. *Nonsuch*
 Vancouver, B.C., H.M.C.S. *Discovery*
 Victoria, B.C., H.M.C.S. *Malahat*
 Prince Rupert, B.C., H.M.C.S. *Chatham*

Each division, commanded by a reserve officer, is responsible for specialized training in one of the various phases of naval activity—gunnery, harbour defence, aviation, communications, etc.; Royal Canadian Navy officers and men assist with instruction.

During 1952-53, the headquarters of naval divisions was relocated at Hamilton, Ont. Technical and professional training continued in the naval divisions, with 1,043 persons receiving specialized instruction. A number of officers and men of the reserve performed continuous naval duty in the place of regular force officers and men where vacancies existed in complement.

University Naval Training Divisions.—The university naval training program is designed to give instruction to students in attendance at universities across Canada with the object of providing well-trained junior officers for the Royal Canadian Navy and the Royal Canadian Navy (Reserve). Twenty-six UNTD drawing on the students of 41 universities and colleges have been established for this purpose. The total strength as at Mar. 31, 1953, was 1,109 cadets, the number of applicants considerably exceeding the existing vacancies in nearly every instance. The training period is three years; cadets are required to complete three winter training periods, two summer periods and all required courses. Nineteen UNTD officers entered the Royal Canadian Navy and 291 obtained commissions in the RCN (Reserve).

Training is taken at naval divisions and at universities during the academic year. Summer vacation training is taken both at the East and West Coast schools and at H.M.C. ships.

The Royal Canadian Sea Cadets.—The Royal Canadian Sea Cadets consists of 105 authorized corps sponsored by the Navy League of Canada and administered, trained and supervised by the Royal Canadian Navy. Enrolments as at Mar. 31, 1953, were approximately 5,853 cadets between the ages of 14 and 18 years. In 1952, 391 sea cadets, about 30 p.c. of those eligible, joined the Navy.

Subsection 2.—The Canadian Army

Organization.—Army Headquarters at Ottawa, organized as the General Staff Branch, the Adjutant-General Branch and the Quartermaster-General Branch, conducts the planning and policy for the administration and training of the active and reserve forces of the Canadian Army. Public relations, cadet services, military intelligence, chaplain services, provost and associated activities are directed through Commands by Army Headquarters.

The five Commands and seven areas are located as follows:—

<u>Commands</u>	<u>Headquarters</u>	<u>Areas and Headquarters</u>
Western Command.....	Edmonton, Alta....	(1) British Columbia Area, Vancouver, B.C.
Prairie Command.....	Winnipeg, Man.....	(2) Saskatchewan Area, Regina, Sask.
Central Command.....	Oakville, Ont.....	(3) Western Ontario Area, London, Ont. (4) Eastern Ontario Area, Kingston, Ont.
Quebec Command.....	Montreal, Que.....	(5) Eastern Quebec Area, Quebec, Que.
Eastern Command.....	Halifax, N.S.....	(6) New Brunswick Area, Fredericton, N.B. (7) Newfoundland Area, St. John's, Nfld.

The components of the Canadian Army are the active force, the reserve force, the supplementary reserve, the Canadian Officers' Training Corps (COTC), the cadet services and the reserve militia. Additional to, but not an integral part of, the Canadian Army are the Services Colleges (*see* pp. 1197-1199), officially authorized cadet corps, rifle associations and clubs.

At the end of March 1953, there were 5,220 officers in the Canadian Army active force and 43,238 men; the strength of the Canadian Army reserve force was 7,629 officers and 39,243 men.

Operations, 1952-53.—The 25th Canadian Infantry Brigade, part of the First (Commonwealth) Division, continued to serve with United Nations Forces in Korea; during the period under review, no major offensives were launched by either side. During the year, the first complete program of rotation went into effect; the first battalions of the Royal Canadian Regiment and the Royal 22nd Regiment relieved the second battalions of those Regiments, the 1st Regiment Royal Canadian Horse Artillery relieved the 2nd Regiment and "C" Squadron Lord Strathcona's Horse relieved "B" Squadron. Brigadier M. P. Bogert took command of the Brigade from Brigadier J. M. Rockingham.

The 27th Canadian Infantry Brigade, stationed at Hanover, Germany, continued to fulfill obligations assumed under the North Atlantic Treaty. The Brigade is training as a part of the integrated force of the Supreme Allied Commander Europe. During the fiscal year 1952-53, the Brigade took part in four exercises in conjunction with the British Army of the Rhine and other NATO forces.

The Army component of the Mobile Striking Force contains the portion of the Canadian Army active force that has been given the task, in conjunction with the RCAF component, of dealing with surprise enemy airborne assaults on Canada in the event of war. This force is composed of infantry with supporting arms and services. Parachute, northern operational and Arctic training is conducted each year. It is intended that, ultimately, all operational troops of the Mobile Striking Force will be parachute-trained and will be capable of living and fighting under severe climatic conditions.

Training.—Actual training of active and reserve force personnel is under the General Officers Commanding the five Commands as directed by the appropriate branch of Army Headquarters.

The military training policy for the year 1952-53 was: (1) to improve the standard of individual and collective training, instructional ability and general efficiency of both active and reserve units; (2) to bring active force units to the highest standard of operational training; and (3) to allow collective training in reserve-force units where standard of individual training was sufficiently advanced.

In January 1953, the Army began a program to train soldier apprentices between the ages of 16 and 17; 125 apprentices were enrolled in the first intake. An apprentice enrolls for seven years; two years after enrolment he becomes a regular active service soldier and tradesman; at the conclusion of five years of service he has the option of leaving the Army. Apprentice training will cover basic and corps military training, trades training in selected trades and academic training in mathematics, science and English.

The corps training of officers and men and the basic training of 9,600 recruits was carried out both within units and at various corps schools. In addition, 7,735 personnel attended other courses at schools of instruction.

Basic and advanced training for recruits, as well as refresher courses for all ranks, is conducted in Army Corps Schools organized on a permanent peacetime basis and located as follows:—

Royal Canadian Armoured Corps School, Camp Borden, Ont.

Royal Canadian School of Artillery, Camp Shilo, Man.

Royal Canadian School of Artillery (Anti-Aircraft), Picton, Ont.

Royal Canadian School of Military Engineering, Chilliwack, B.C.

Royal Canadian School of Signals, Barriefield, Ont.

Royal Canadian School of Infantry, Camp Borden, Ont.

Royal Canadian Army Service Corps School, Camp Borden, Ont.

Royal Canadian Army Medical Corps School, Camp Borden, Ont.

Royal Canadian Dental Corps School, Ottawa, Ont.

Royal Canadian Ordnance Corps School, Montreal, Que.

Royal Canadian Electrical and Mechanical Engineers School, Barriefield, Ont.

Canadian Provost Corps School, Camp Borden, Ont.

Canadian School of Military Intelligence, Camp Borden, Ont.

Equipment.—The Canadian Army equipment development program has continued to concentrate on the fields particularly suited to Canadian capabilities and on those in which there are special Canadian needs.

For industrial and strategic reasons, the Canadian Army is adopting, with some exceptions, American-type armament and vehicles. As far as possible, these new equipments will be produced in Canada. The importance of standardization has been increased by the adoption of North American equipment and an important contribution to standardization has been the influencing by Canada of selected developments in other countries. Interest continues to be displayed by the United States and the United Kingdom in Canadian development of combat clothing, a new flame thrower and a number of vehicles.

The Reserve Force.—The reserve force provides the basis for expansion of the field force in the event of an emergency. It is employed on a part-time basis and is subject to annual military training.

Training in 1952-53 was devoted to improving individual skill in handling weapons, fieldcraft, technical ability and physical fitness as well as improving the qualities of leadership, professional ability and instructional techniques of officers and NCO's.

A training period of 45 days at local headquarters was authorized for all ranks of the reserve force with an additional 15 days training at annual camps for 18,000 all ranks. During the year ended Mar. 31, 1953, a total of 3,908 officers and 9,865 other ranks attended summer camps.

The Canadian Officers' Training Corps.—The Canadian Officers' Training Corps comprises in its membership the reserve force command contingents and the university contingents.

Command contingents provide the means whereby potential reserve-force officers who are unable to attend the Canadian Services Colleges or to join a university contingent of the Canadian Officers' Training Corps can qualify for a commission in the reserve force. Candidates are enrolled as officer cadets and may choose methods of training varying from a complete 26-week course at a corps school to a three-year course consisting of training at local headquarters and at summer camps; 1,780 officer candidates were enrolled in this training on Mar. 31, 1953.

In 1952, 1,939 officer cadets (students at universities or service colleges) reported for summer training. Of these, 1,847 passed their courses; 399 qualified as lieutenants and 625 as second-lieutenants in the reserve force; and 35 officer cadets were commissioned in the active force during the period under review.

The Cadet Services of Canada.—The Royal Canadian Army Cadets are formed into 547 cadet corps with a total enrolment of 57,300. This organization affords youths of 14 to 18 years of age an opportunity to receive fundamental training as soldiers and junior leaders. The training program was revised in 1951. Summer-camp training consists of seven-week courses conducted at Aldershot, N.S., Valcartier, Que., Ipperwash, Ont., Dundurn, Sask., and Vernon, B.C. These courses teach such military trades as driver mechanics, radio-telephone operators, wireless and line operators and basic-training instructors. The National Cadet Camp at Banff National Park, Alta., is conducted in August as an award for outstanding proficiency in cadet work for 156 carefully selected master and first-class army cadets.

Subsection 3.—The Royal Canadian Air Force

Organization.—Air Force Headquarters at Ottawa conducts the planning and policy for administration and training of the active and reserve forces of the Royal Canadian Air Force. The organization of the RCAF is divided into three categories—personnel, logistics, and plans and operations. This functional division is reflected in the Air Force Headquarters organization.

During the year ended Mar. 31, 1953, No. 1 Air Division was established with temporary headquarters at Paris, France; in 1953-54 the Air Division headquarters will move to Metz.

Higher formations of the RCAF, with location of headquarters, are as follows:—

<u>Formation</u>	<u>Headquarters</u>
Air Materiel Command.....	Ottawa and Rockcliffe, Ont.
Air Defence Command.....	St. Hubert, Que.
Air Transport Command.....	Lachine, Que.
Training Command.....	Trenton, Ont.
Maritime Air Command.....	Halifax, N.S.
1 Tactical Air Command.....	Edmonton, Alta.
12 Air Defence Group.....	Vancouver, B.C.
14 Training Group.....	Winnipeg, Man.
1 Air Division.....	Paris, France.

The expansion of the Air Defence and NATO forces continued and Air Transport Command commitments increased because of a requirement for additional flights to support forces overseas. The contribution to the Korean airlift was maintained.

At the end of March 1953, the strength of the RCAF regular force was 8,071 officers and 32,352 men; the strength of the reserve auxiliary was 1,647 officers and 4,227 men.

Operations, 1952-53.—*Air Defence.*—Air Defence Command's resources were augmented by the activation of a number of units of the Early Warning System and the formation of additional fighter squadrons.

NATO.—Canada's contribution to the air forces placed under the command of Supreme Headquarters Allied Powers Europe (SHAPE) consists of 12 jet fighter squadrons organized in four wings. One wing of three squadrons is stationed at North Luffenham, England, one wing of three squadrons at Zweibrucken, Germany, and one wing of three squadrons at Gros Tenquin, France. When the fourth wing of three Sabre squadrons arrived at Baden-Soellingen, Germany, in September 1953, Canada's NATO commitment was completed well ahead of schedule.

No. 30 Air Materiel Base was formed at Langar, England, to provide logistic support for all RCAF forces in Europe.

Maritime Operations.—Maritime Air Command continued to expand during the year. No. 404 and No. 405 Maritime Squadrons expanded crews and aircraft and No. 407 Maritime Squadron was formed and moved to the West Coast. Maritime aircrews were sent to the United Kingdom on advanced anti-submarine warfare courses at the Joint Anti-Submarine School. The RCAF staff of the Canadian Joint Maritime Warfare School was expanded and the school commenced advanced junior and senior joint tactical courses for staff officers.

Air Transport Operations.—The squadrons of Air Transport Command continued to provide logistical support for units of the defence forces and provided similar services for other government departments when no commercial air facilities were available. Two squadrons were employed in Canada solely on air-transport work; one of these squadrons was converted from Dakotas to C-119 Fairchild aircraft which has a greater cargo-carrying capacity.

Air Transport Command expanded its activities to include transatlantic flights in support of the Air Division in Europe.

Other.—Air photography and survey work continued for the large mapping operation that has been undertaken. Station photographic sections were established at newly opened units to provide service for the maintenance of air cameras and for the processing of films used in air-to-air and air-to-ground aircrew training exercises.

Twenty-three RCAF forecast offices provide meteorological services in Canada in conjunction with the Department of Transport.

Training and Equipment.—Aircrew training courses were organized for potential aircrew of the RCAF regular, reserve university and Canadian Services Colleges flight cadets and the RCN, and for cadets from countries in the North Atlantic Treaty Organization. During the year ended Mar. 31, 1953, 2,106 NATO

and RCAF personnel were trained as pilots, navigators and radio officers. Since the initiation of the NATO aircrew training plan in 1950, 768 pilots and 947 navigators have been graduated from RCAF schools. At Mar. 31, 1953, 1,200 NATO aircrew were training in Canada.

Development courses for officers and flight cadets were conducted at the Officers School, London, Ont. Service indoctrination training of airmen was carried out at No. 2 Manning Depot, St. Johns, Que. Basic flying training courses were conducted at the four flying training schools at Centralia, Ont., Gimli, Man., Claresholm, Alta., and Calgary, Alta., and at advanced flying schools at Saskatoon, Sask., and Portage la Prairie, Man.; weapons training for pilots was given by the school at MacDonald, Man. Navigation training was conducted at two air navigation schools at Winnipeg, Man., and Summerside, P.E.I. The air radio officers school at Clinton, Ont., is the basic training centre for potential radio officers.

Formal trade courses for newly commissioned non-flying list officers were conducted at RCAF schools in aeronautical engineering, armament, supply and telecommunications. Courses were provided to qualify officers in flying control.

RCAF trade specifications have been revised to an approved tri-service standard and the majority of trades have been converted to the new trades structure as represented by these specifications; approximately 85 p.c. of personnel were reclassified accordingly. Trade training has been changed, as required, in accordance with the new trade specifications. During the fiscal year 1952-53, 7,350 groundcrew were given basic training.

Equipment.—Canadair continued quantity production of the F-86E Sabre jet fighter for the RCAF and it has been possible to provide Sabres to the Royal Air Force as part of Canada's Mutual Aid contribution. A. V. Roe Canada Limited is now producing the Orenda jet engine for use in both the Sabre and the CF-100 all-weather jet fighter. The same firm is producing the CF-100 in quantity and some operational squadrons have already been formed. Canadian-produced Silver Star (T33) two-seat jet trainers, powered by Rolls Royce Nene engines, are used to convert pilots from conventional to jet aircraft.

As part of the radar defence of the North American Continent, installation of equipment has been completed at some sites and is well advanced at the remainder.

RCAF Reserve.—The sub-components of the RCAF reserves are designated as follows: (1) the Auxiliary; (2) the Primary Reserve; and (3) the Supplementary Reserve.

During 1952-53, no major changes were made in the RCAF reserves. To bring all RCAF personnel—whether regular or primary reserve—attending Canadian universities under the same control, reserve university squadrons were reorganized and all personnel are now administered by the same squadron headquarters. Six new university squadrons were established during the year as well as two new auxiliary medical units.

During the summer of 1952, 182 pilots, 57 navigators and 18 radio officer trainees from universities and the Canadian Services Colleges underwent training. Pilots complete the regular syllabus of training in three summers; navigators and radio officers graduate in two summers and are employed in their trade the third summer.

Cadets in non-flying categories from Canadian Services Colleges and universities who were participating in their first summer program proceeded from indoctrination training at the reserve officers' school to their respective basic courses in aeronautical engineering, supply, telecommunications, and armament. Second-year cadets completed the final phases of their basic courses and, if successful, were commissioned. Cadets who successfully completed training in 1951 returned as reserve officers and were employed in their trade during the summer of 1952.

Considerable emphasis was placed on improving the means of manning the RCAF auxiliary with trained, young, aircraft tradesmen. In 1952, the summer training program for high-school students interested in auxiliary service trained approximately 1,100 recruits, of whom 46 transferred to the RCAF regular force, 847 remained with the auxiliary and 207 were released. The reserve tradesmen training plan was introduced in December 1952, superseding the high-school student plan, incorporating both students and air cadets, and consolidating under one plan the majority of aircraft tradesmen in training. This program involves a winter and summer phase with a target quota of 2,250 trainees to reach Group I standard by the end of the summer of 1953. Winter training for air cadets enrolled in this primary reserve scheme is to be conducted within air cadet squadrons. The RCAF continued to offer vacancies for auxiliary tradesmen on regular force courses, but very few are able to take advantage of this opportunity because of the requirements of their civilian occupations.

Royal Canadian Air Cadets.—The Royal Canadian Air Cadets are closely associated with the RCAF. There are 239 squadrons located across Canada with an enrolment of 18,300 cadets, administered by the Air Cadet League of Canada, a voluntary civil organization. The value of this training is confirmed by the fact that, during 1952-53, 1,142 ex-air cadets joined the RCAF regular squadrons and several hundred signed on with the reserve. Summer camps were held at RCAF Stations, Abbotsford, B.C., Aylmer, Ont., and Greenwood, N.S., and were attended by 3,808 cadets and 436 officers and instructors. During the year, 218 senior air cadets, who were awarded flying training scholarships, successfully completed the course of 17 hours flying and 60 hours ground school; 167 air cadets continued instruction at their own expense and received private pilot's licences.

The highly successful international exchange visits program, sponsored jointly by the RCAF and Air Cadet League, was further extended in 1952-53. Twenty-five cadets were exchanged with the United Kingdom, 25 with the United States, and two each with Norway, Sweden, Denmark and Holland.

Subsection 4.—The Defence Research Board

The Defence Research Board was established on Apr. 1, 1947, by an amendment to the National Defence Act.

The Board consists of a full-time chairman and vice-chairman, six ex officio and six or more appointed members. The ex officio members are the Chiefs of Staff for the three Armed Services, the President of the National Research Council, the Deputy Minister of National Defence and a representative of the Department of Defence Production. The remaining members, appointed by the Governor General in Council, are drawn from the universities and industry because of their scientific and technical backgrounds. Their appointments are for three-year terms.

The organization consists of a headquarters staff and field research stations known collectively as the Defence Scientific Service. Advisory committees composed of leading Canadian scientists, through consideration of a variety of problems, provide invaluable assistance to the Defence Scientific Service.

In planning this organization, the Government considered the vital need for continuity in research and planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level, the Chairman of the Board has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council.

An essential part of the defence of Canada, the Defence Research Board has been described as a fourth Service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. This task is the main function of the headquarters staff and its work is strengthened by the expert counsel of comprehensive advisory committees.

The Board's policy is to select and concentrate its efforts upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities (such as the National Research Council) are used wherever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields that have little or no civilian interest.

From the policy of specialization it follows that close collaboration must be maintained with Canada's larger partners. Specialization is made possible only through the willingness of the United Kingdom and the United States to exchange the results of their broader programs for the less numerous but, nonetheless, valuable benefits of Canadian research.

An important and logical field of specialization for Canada is Arctic research. This interest in Arctic problems is reflected in nearly all the Board's activities. An outstanding example is a program of ionospheric research carried on jointly with the Department of Transport. The north magnetic pole is located on the northern edge of Canada's mainland and the auroral belt, in which ionospheric disturbances make radio communication difficult, is centred around the north magnetic pole and extends well down into the inhabited areas of Canada. This means that Canada has radio communications problems duplicated only in northern Siberia, and which are of vital importance not only to defence but to civil aviation and communications. It is, therefore, appropriate that Canada should put special effort into this field of research and that the latter should be supported by Government civil and military agencies.

The Board's Radio Physics Laboratory has designed and supplied the special equipment and operator training for a chain of Department of Transport ionospheric observatories scattered across the auroral belt. The results of the observations from these stations are analysed at the Radio Physics Laboratory and are used not only to issue current forecasts of the most effective radio transmission frequencies but also in more fundamental research aimed at improving northern communications. The results are passed to the Central Radio Propagation Laboratory at Washington, U.S.A., for use in the compilation of world-wide frequency prediction tables. The whole program is an example of logical specialization and of effective inter-departmental and international co-operation.

Pursuing its established policy, the Defence Scientific Service continues to make available to the scientific community at large those results of its work that have other than purely military importance.

Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

Section 2.—Services Colleges and Staff Training

Canadian Services Colleges.—The Royal Military College of Canada was founded in 1876 at Kingston, Ont. Royal Roads was established in 1941, near Victoria, B.C., as a school for naval officers. In September 1948, both colleges were constituted as the Canadian Services Colleges to provide a joint educational and training program that would produce officers for the three Armed Services of Canada. To these has been added the Collège Militaire Royal de Saint-Jean located at St. Johns, Que.; established principally to satisfy the requirements of French-speaking candidates, it was formally opened by the Governor General in the autumn of 1952.

The course for technical officer candidates at the Colleges is of four years duration. Cadets of the Collège Militaire Royal take a preparatory year. The first two years of the course run concurrently at all three of the colleges. Cadets who have taken the first two years at Royal Roads or cadets who have taken the preparatory and first two years at the Collège Militaire Royal, if they are selected to take the full course, proceed for the last two years of the general or engineering courses to the Royal Military College.

Autumn, winter and summer terms make up the college year of 11 months, with the exception of the fourth year at RMC which has no summer term. From September to May, the autumn and winter terms, 85 p.c. of the instructional time is allotted to academic subjects and the remainder to military subjects including drill and physical training. May to mid-August, the summer term, is devoted to practical service training at navy, army or air force establishments.

Cadets may enter the Canadian Services Colleges either as reserve cadets or as regular force cadets under the terms of the Regular Officer Training Plan introduced during the summer of 1952. Cadets who have entered as reserve cadets may transfer at any time during their course to the regular force. The Regular Officer Training Plan enrolls cadets in the branch of the Armed Forces of their choice and provides a university education, with pay, at one of the Services Colleges or at a Canadian university; on successful completion of their academic and military training, cadets are granted a commission in the regular force.

On completion of Canadian Services College training, reserve cadets may enter the regular or reserve force as commissioned officers in the branch for which they have been trained. Completion of Services College training qualifies cadets for commission in the non-technical branches of the three Services. Regular force cadets of the technical branches of the three Services, upon completion of the four-year Service College course, are sent to specified universities at public expense for further training to degree standard.

For admission to the colleges a candidate must be a Canadian citizen or other British subject, normally resident in Canada. Candidates for admission to the Royal Military College or Royal Roads must have reached their sixteenth but

not their twentieth birthday on Jan. 1 of the year of entry. A specified standard of physical fitness is required of all applicants. The academic requirements for admission are:—

University senior matriculation (or equivalent) in the following subjects: English, physics, mathematics (algebra, geometry and trigonometry) chemistry, and either history or a language (French for English-speaking candidates and English for French-speaking candidates).

The academic requirement for the Collège Militaire Royal is university junior matriculation including chemistry and a language (French for English-speaking candidates and English for French-speaking candidates).

At one of the six regional centres, candidates are medically examined and take education tests. In addition, each candidate appears before a Board composed of a member of the directing staff of one of the Colleges and a representative of each of the three Services.

One-half of the cadets entered in the Canadian Services Colleges are selected on provincial quotas determined by population; the other, in open competition. Academic standing and the recommendations of the service boards as to the physical and personal characteristics of the candidates are the bases for selection with the final selection of the candidates qualified for admission being made by a board of senior officers appointed by the Minister of National Defence.

Up to 15 Dominion Cadetships, five to each Service, are provided by the Federal Government to sons of ex-service and service personnel. Each Cadetship, valued at \$580, covers the total cost of lodging, uniform clothing, tuition, etc., in the first year. A small number of scholarships are also provided in each province.

In addition, the following associations award annual scholarships:—

The Navy League of Canada:	Up to 10 scholarships to Royal Canadian Sea Cadets eligible for entry to the Canadian Services Colleges, valued at \$580 each.
The Naval Officers' Association of British Columbia:	One or more scholarships valued at \$580 each.
Air Cadet League of Canada:	Sixteen scholarships to serving or ex-members of Air Cadets Squadrons, valued at \$600 each.
The RCAF Benevolent Fund Scholarships:	One scholarship to ex-members of the RCAF or their dependants, valued at \$655.
The Duchess of Connaught Scholarship founded by the Laurentian Chapter of the Imperial Order of the Daughters of the Empire:	One scholarship valued at \$350.
Ontario Canteen Fund Scholarships:	Four scholarships valued at \$580 each.
Royal Canadian Artillery Memorial Scholarships:	Four scholarships valued at \$300 each.

The Leonard Foundation, the Royal Canadian Artillery Officers' Regimental Fund Committee and Dominion-Provincial Student Air Bursaries provide bursary assistance to cadets.

Cadets attending the Colleges as members of the regular force are not eligible for cadetships, scholarships or bursaries, as the cost of their education is fully met from public funds.

At Mar. 31, 1953, the Royal Military College had 108 cadets in first year, 71 in second, 91 in third and 109 in fourth. Royal Roads had 78 cadets in first year and 70 in second. The Collège Militaire Royal had 129 in first year.

Advanced Training Colleges.—The Canadian Army and the Royal Canadian Air Force operate colleges for giving staff and command training while the National Defence College provides facilities for advanced study of defence problems.

The National Defence College, Kingston, Ont., opened on Jan. 5, 1948, is a senior Canadian defence college providing an 11-month course of study designed to cover the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and government departments attend as well as one or two representatives from industry. An extensive lecture course is provided, with lecturers chosen from leaders in various fields in Canada, the United States, the United Kingdom and other countries. In addition, educational tours and visits to parts of Canada, the United States, Europe and the Middle East are made to give students more knowledge of conditions and influences in their own and other countries.

The Canadian Army Staff College, Kingston, Ont., is a military staff college operating on a permanent basis to train officers for positions of staff and command. The course extends over 10 months. A joint instructional staff includes faculty members from the three Canadian Services, the United States and the British armies. The student body is comprised of members from the three Services and from five different nations. Aside from purely military subjects, the curriculum provides for study of current world affairs and lectures by prominent guest speakers in this field. Graduates are qualified for Grade II Staff appointments or Commands in the Service.

The Royal Canadian Air Force Staff College, Toronto, Ont., is a permanent Air Force staff college providing a training program designed to give officers of Squadron Leader to Group Captain rank the necessary background and knowledge to fit them for Staff and Command positions. The Directing Staff includes officers from the Royal Canadian Air Force, the Canadian Army and the Royal Air Force, while the student body consists of officers from the Royal Canadian Navy, the Canadian Army, the Royal Air Force, the United States Air Force, as well as the Royal Canadian Air Force. Besides the normal organizational and administrative subjects, the curriculum includes an advanced study of the three aspects of air power; air strategy and its relation to ground and sea forces; current world affairs and their effect on the Canadian strategic position; and the industrial potential of the country. Subjects are presented and discussed under the guidance of the Directing Staff or guest speakers, many of whom are prominent in Canadian and United States diplomatic, university and industrial life.

PART II.—DEFENCE PRODUCTION*

Department of Defence Production.—This Department was set up on Apr. 1, 1951, to handle defence procurement previously carried out by the Minister of Trade and Commerce acting through the Canadian Commercial Corporation. The Department also undertook responsibility for the control and allocation of essential materials and for encouraging the development of Canada's strategic resources.

It has three main units concerned with procurement. (1) The Production Branch deals with commodities other than aircraft which require special facilities for their production. These include ships, guns, ammunition, electronic equipment,

* Prepared in the Economics and Statistics Branch of the Department of Defence Production, Ottawa.

military vehicles, machine tools and defence construction. (2) The Aircraft Division is responsible for the purchase of aircraft. (3) The General Purchasing Branch procures commodities which are either of standard commercial types or of specifications not greatly different from commercial ones; for instance, clothing, food, fuels and barrack stores.

The Materials Division, which was concerned with ensuring that essential materials were available for defence purposes and essential civilian uses, steadily reduced the number of controls it was administering during 1953. At the end of the year, most of its residual functions were transferred to the Department of Trade and Commerce, and the unit ceased to be a Division.

Defence Orders Placed.—Table 1 shows defence orders, excluding those for stockpiling and capital assistance, by programs from Apr. 1, 1949, to Mar. 31, 1953. The increase since the outbreak of hostilities in Korea during the summer of 1950 is apparent. Orders placed in the fiscal year 1950-51 were over three times as great as those of the previous year, and orders in 1951-52 were over seven times the pre-Korean level. The peak period for orders was from July to September 1951. In 1952-53, the rate of placing orders decreased.

The aircraft program has been the largest and, although the balance of the programs will alter as time goes on, it is likely to remain the largest because of the importance of airpower to Canada.

1.—Federal Government Defence Orders, by Program, Years Ended Mar. 31, 1950-53

NOTE.—Figures exclude stockpiling and capital assistance. Figures for the first three fiscal years have been revised since the publication of the 1952-53 Year Book.

Program	1949-50	1950-51	1951-52	1952-53
	\$'000	\$'000	\$'000	\$'000
Aircraft.....	70,641	321,519	579,289	533,224

Construction.....	28,672	67,645	187,011	153,919
Miscellaneous programs.....	33,326	51,395	99,781	83,988
Domestic district office orders.....	1	1	68,294	55,109
Totals.....	224,782	741,347	1,670,653	1,263,342

¹ Until Apr. 1, 1951, orders placed by the domestic district offices were allocated according to program.

Table 2 shows defence procurement orders according to the countries in which they were placed. Large government orders were placed in the United States as the expanded defence program got under way, and were especially large during the first half of the fiscal year 1951-52. In the second half of that year, orders to the United States declined rapidly. Orders placed in the United Kingdom were small at the beginning of the defence program but increased rapidly during the latest two fiscal years; the 1952-53 orders were larger than those placed in the United States.

Heavy initial orders were placed in the United States as a result of the decision to standardize on North American rather than on British types of army weapons. While Canadian plants were being tooled up to produce the new types of equipment, interim requirements had to be met from the United States. Furthermore, the decision to produce, in Canada, certain aircraft of existing United States types also led to placing heavy orders in that country for components, particularly engines and electronic equipment.

The main items ordered from the United Kingdom have been Centurion tanks, an aircraft carrier and Nene jet engines.

Canada is buying certain defence equipment in other countries but, at the same time, is exporting large quantities. Among the aircraft being exported to the United States are the F-86E Sabre jet fighter, the Harvard trainer and the Beaver. Guns are also being produced in Canada for the United States, both the 3-inch 50-calibre naval gun and the 120-mm. gun. Other items ordered by the United States Government include explosives, ammunition components and mobile radar equipment. Canada is producing a number of items that will be sent to NATO as mutual aid. These include Sabre jet fighters, aero engines, artillery ammunition, machine guns and electronic equipment.

Production Programs.—A new stage in the development of the Canadian aircraft industry was reached in the autumn of 1951 with the delivery to the Royal Canadian Air Force of the first pre-production model of the CF-100 all-weather jet fighter. This is the first all-Canadian jet aircraft, the airframe and the Orenda engines that power it being designed and produced in Canada. Deliveries under the main production contract began in 1952 and the aircraft is now in squadron service. The F-86E Sabre jet fighter, of United States design, has been in volume production since the autumn of 1951 and a number have gone to the United Kingdom and to the United States. An improved model of this aircraft is now being produced, powered by the Orenda engine; the earlier version used engines purchased from the United States.

The Harvard primary trainer aircraft, also of United States design, began to come off the Canadian production line during the autumn of 1951. Engines were at first imported from the United States, but were later produced in a new plant near Montreal, Que., which also supplies spare engines for the large number of Harvards now flying in many parts of the world. The Beaver aircraft is being manufactured to meet large United States orders as well as domestic civilian requirements. This is a Canadian-designed aircraft for general-purpose use in rugged territory. The Otter, a larger aircraft developed by the same company, has also proved very successful and a number of them have been purchased for the RCAF. Full-scale production began during 1952 of the T33-A Shooting Star jet trainer for the RCAF.

A number of aircraft stored since World War II have been reconditioned and equipped to serve new purposes. Some bombers were converted for use by the Maritime squadrons of the RCAF and other aircraft were converted for training purposes.

The above development required a considerable expansion in the capacity of the Canadian aircraft industry, much of the new plant and equipment required being provided by the Government as capital assistance.

Canada has built up an aero-engine industry as well as expanded the output of airframes. The Orenda engine, entirely of Canadian design, was the first jet engine to be built in Canada. The factory was owned by the Crown and operated by the firm that developed the engine, but was in 1953 sold to that firm. The plant supplying radial engines for the Harvard is Crown-owned. Another plant has been provided for the overhaul of jet engines. In addition, the production of components for jet engines, such as fuel systems, magnesium castings, and blades for compressors and turbines, has been introduced into Canada in plants established with government aid. Further development of Canada's aero-engine capacity will take place when the jet engines now being imported from the United Kingdom begin to be assembled in Canada.

Extension of industrial capacity is also taking place in the field of aircraft instruments. Artificial horizons, formerly imported from the United Kingdom, are now being produced in this country, as are a number of instruments formerly imported from the United States. Engine and instrument bearings are also now being produced in Canada.

Electronic devices are very important in defence, especially in the field of communication by radio, in the interception of aircraft and ships by radar, in fire control and in the exploding of missiles near their target. The Canadian electronics

industry has increased its military capacity. Facilities have been established to produce items new to Canada's economy, including sub-miniature tubes and components, and crystals.

A large quantity of radar and communications equipment for the northern screen of the air defence of this Continent is being produced in Canada, together with anti-aircraft and other types of radar for use by the Armed Services. One type of early-warning radar used by anti-aircraft artillery, the No. 4 Mk. VI, is being supplied as Mutual Aid to NATO and is being used as well in the air defence of Canada. A certain number have also been delivered to the United States. Radar proximity fuses are now being produced in Canada for the first time.

A new type of pack radio for use by the infantry was developed in Canada and came into production during 1952. It has a range of one mile and is believed to be the best of its type in existence. It will be used extensively by the Canadian Army and by other North Atlantic Treaty countries, to which it is being supplied as Mutual Aid. Other production includes telephone, microwave and radio equipment for the communications network behind the radar screen.

A new development is the design and production in Canada of a flight simulator, which is an electronic device for reproducing the conditions of flight so that pilots may receive training on the ground.

Canadian shipyards are working on orders for escort vessels and minesweepers, as well as a number of harbour craft. In addition to the new ships, the reconversion of a "Mothball Fleet" of 36 minesweepers and frigates is being completed. The escort vessels, designed in Canada except for the propulsion machinery, are the most modern of their kind, equipped with all the latest devices and weapons; the first was launched in November 1951. To reduce their magnetism the minesweepers are being built of aluminum, with the hulls sheathed in wood. Five gate vessels, for duty at harbour entrances, have been completed and delivered to the Royal Canadian Navy and an icebreaker has also been completed for the Department of Transport.

The construction of these vessels calls for work elsewhere than in the shipyards, for instance the manufacture of boilers, turbines, auxiliary engines, deck gear and other components. Most of the contracts for such items have been let in Canada.

An aircraft carrier has been ordered from the United Kingdom to replace the *Magnificent*, which is on loan from the Royal Navy.

Under the weapons program, the major production project has been the 3-inch 50-calibre naval guns and mountings. The first of these equipments was delivered to the United States but the requirements of the Royal Canadian Navy will be met as they arise. Browning 0.5-inch machine guns were produced for use in the Sabre and CF-100 jet fighters, and 3.5-inch rocket launchers for use by the Canadian Army. Arrangements have been made to produce 155-mm. and 105-mm. howitzers, the 105-mm. recoilless rifle, and 81-mm. and 60-mm. mortars. Contracts placed for small arms were limited, partly because these weapons have not yet been standardized.

Ammunition requirements altered with the change-over to United States types of equipment. It was decided to produce in Canada ammunition for the Army's 155-mm., 105-mm. and 90-mm. artillery equipments. Naval requirements to be met from domestic sources include rounds for 3-inch 50-calibre and 40-mm. Bofors

guns, depth charges and other types of anti-submarine projectiles. Deliveries to the RCAF include rockets and machine-gun ammunition. Explosives for the ammunition are being produced in two plants, one of which manufactures picrite and the other a number of explosives including RDX/TNT and rifle powder. Phosphorus and hexachlorethane are also being made in Canada to government specifications.

Automobile manufacturers are producing military trucks to North American specifications. Because of the large capacity of these plants, the output of trucks can be expanded quickly to meet any foreseeable demands from the Armed Services. Other types of military vehicles are being produced in smaller quantities and a number of civilian types of vehicles have been purchased for military use. As already mentioned, Centurion tanks are purchased from the United Kingdom as it was decided that the establishment of facilities for manufacturing tanks in Canada would not be justified.

The construction program has involved heavy outlays for barracks and other types of accommodation, buildings for the radar screen, air-strips and other works. These were made necessary by the long-term problems of defence and by increases in the size of the Armed Forces.

Other requirements of the Armed Forces have included food, fuel and lubricants, chemicals, medical supplies, photographic stores, laboratory, scientific and other instruments, barrack-room stores, furniture and furnishings, office equipment, and a wide variety of textile products.

In some cases, defence production has involved the setting up of facilities that will have small residual value after the emergency is over, and capital assistance has been granted in the form either of machinery and equipment or of new buildings or extensions. Everything so provided remains the property of the Crown. Recently, however, since the more specialized types of defence production capacity have been established, there has been less need of capital assistance. Firms are now encouraged to install their own plant, a part of which they may be permitted to write off at a special, faster, rate for income-tax purposes. Some facilities set up as capital assistance have been sold to private firms which will ensure that they will be available to meet defence needs.

Controls and Priorities.—In the early stages of increased defence production it was necessary to direct the use of certain essential materials produced in Canada and elsewhere. The Defence Production Act, Sect. 30, provides that "The Governor in Council may, from time to time, designate as an essential material any material or substance, the control of the supply and use of which is in his opinion essential to ensure the availability of adequate defence supplies or for the construction or operation of defence projects". Orders in Council have designated as essential a number of chemicals and chemical compounds (later reduced to sulphur only), wood-pulp and newsprint (no longer so designated), certain forms of non-ferrous metals and non-metallic minerals, certain forms of iron and steel, and aviation gasoline. After a material has been declared essential, the Minister of Defence Production may regulate its production, supply, distribution and use.

In the case of non-ferrous metals, control was effected by an order approval system whereby purchase orders placed by manufacturers were screened in the Department of Defence Production. These systems were established for primary and wrought aluminum, primary copper and certain copper products, primary nickel and certain nickel products, cadmium, lead and zinc. Sulphur was also controlled under a

similar system. Cadmium, lead and zinc were decontrolled in May 1952 and sulphur in November 1952. Controls on certain copper and aluminum products were cancelled in November 1952, the remaining controls on orders of these metals being removed in March 1953. Controls on nickel and certain of its products were relaxed in June and July 1953 and abolished in October 1953.

In the case of steel, supplies were diverted as necessary to defence and defence-supporting purposes by the direction of individual requirements at the mill, warehousing or fabricating levels. In addition, the use of structural steel for a wide variety of less essential purposes such as places of amusement, liquor stores, hotels, banks and service establishments was placed on a permit basis in February 1951, the system being revised in January 1952. A Ministerial Order of January 1952 prevented the accumulation of excessive inventories of steel and ensured that steel would be used for the purpose for which it was acquired. These controls were abolished on Jan. 1, 1953, from which date end-use certificates were required on purchase orders for steel and the power also remained to direct steel to defence uses. Controls on steel were revoked in October 1953.

In addition to the above controls on specific materials, the Minister of Defence Production has general powers for establishing a priority system for any type of essential supplies, under Order in Council P.C. 2399 of May 16, 1951. It has not been necessary to exercise these powers formally to any great degree, and priorities in Canada have been dealt with largely by informal consultation between the Government and representatives of industry.

Since Canadian firms are dependent on the United States for a considerable proportion of their requirements of materials and semi-finished and finished goods, the system of controls in that country has an important effect in Canada. Under the United States Controlled Materials Plan, which governed the distribution of steel, copper and aluminum, quarterly estimates of Canada's future requirements were made by the Department of Defence Production and considered at Washington, D.C., along with claims from all segments of the United States economy. An allocation was then made to Canada and distribution to Canadian industry was carried out through the Department. The CMP was succeeded on June 30, 1953, by the Defence Materials System, under which a similar approach was adopted towards Canadian requirements.

With respect to the general United States priorities system, the Department screens applications from Canadian firms and assists them in obtaining their approved requirements on a basis generally comparable to that accorded to United States concerns. Similarly, United States procurement agencies or firms that have defence requirements in Canada are given any necessary assistance by the Canadian Department of Defence Production. By agreement, the Department gives such United States orders treatment comparable to that given to orders for the Canadian defence program.

By the end of 1953, the Department's interest in the materials field had ceased, except with respect to materials in short supply in the United States. Its remaining activities, so far as the commercial and general economic aspects of strategic materials were concerned, were therefore transferred to the Department of Trade and Commerce. A priorities and expediting group was retained to assist Canadian firms in obtaining their requirements of items under control in the United States, and to assist Canadian defence contractors with any supply difficulties that they might meet in Canada or the United Kingdom.

Strategic Resources.—The raw materials that Canada produces are essential not only for its own defence effort but also for that of friendly countries, as in the case of nickel, of which Canada produces about four-fifths of the world supply. Table 3 gives statistics for the leading strategic minerals; the high proportion of output exported is apparent.

3.—Canadian Production, Exports and Imports of Principal Non-Ferrous Metals, 1952

(Thousands of short tons)

Primary Metal	Domestic Production	Exports to—			Imports	Domestic Supply
		United States	United Kingdom	Other Countries		
Aluminum.....	499.8	116.0	256.4	40.2	—	87.2
Copper, refined.....	196.9	52.6	41.6	19.4	13.0	96.3
Lead, refined ¹	177.4	100.5	26.7	2.5	—	47.7
Nickel, refined.....	76.8	73.9	2.6	0.6	—	—
Zinc, refined.....	223.1	71.0	87.2	8.8	—	56.1

¹ Includes lead smelted from imported ore.

Canadian output of strategic materials, on the whole, increased rapidly between 1950 and 1952, thus strengthening the base of the defence effort. Table 4 compares the output of a number of strategic commodities in 1952 with that of the two previous years. Of special interest are the increases in petroleum and natural gas owing to the development of the western oil fields and the extension of oil pipelines.

4.—Production of Selected Strategic Commodities, 1950-52

Material	Unit	Production			P.C. Change 1950-52
		1950	1951	1952

PART III.—CIVIL DEFENCE*

The accelerating threat of aggression that began shortly after the completion of demobilization following World War II made necessary the reorganization of military strength. It also made apparent the need for the development of a plan of civil defence as part of Canada's program of defence against direct attack. Thus, in October 1948, the Minister of National Defence appointed a Co-ordinator of Civil Defence whose task it was to prepare such a plan. To assist in the co-ordination of the planning, an interdepartmental committee—the Federal Civil Defence

* Prepared from information supplied by Major-General F. F. Worthington, Civil Defence Co-ordinator, Department of National Health and Welfare, Ottawa.

Planning Committee—was established, as well as a Federal-Provincial Advisory Committee composed of the Federal Minister responsible for civil defence as chairman and each Provincial Minister responsible for civil defence as a member. In February 1951, the administration of civil defence was transferred from the Department of National Defence to the Department of National Health and Welfare.

The Canadian plan was developed after study of similar organizations in the United Kingdom, Western Europe and the United States. It was agreed that civil defence organization should be incorporated within the framework of civil government at each level—federal, provincial and local—each with its own sphere of responsibility. The country is divided into a number of target areas, around each of which is a mutual aid area for immediate support. The territory outside these areas is organized on a mobile support and reception area basis. The channel of communication is from the federal authority to provincial authority and thence to local authority.

The Federal Office of Civil Defence consists of the Civil Defence Co-ordinator and the following services: operations and training, administration and supply, health planning, welfare planning, communications and transportation. A number of other departments are involved in planning, such as the Royal Canadian Mounted Police, the Department of Agriculture, Department of Transport and the Defence Research Board.

In co-operation with the Royal Canadian Air Force, an attack-warning system has been established in all target areas and sirens have been provided by the Federal Government. In co-operation with the Departments of National Defence and Veterans Affairs, a program of stockpiling medical supplies and equipment is in progress across Canada.

The Federal Civil Defence Technical Training School has been operating continuously since January 1951, conducting staff courses for organizers, instructors courses (general and rescue), welfare courses and radiological monitoring courses, while courses on damage control and tactical operations are being added. In addition, the Federal Government has sponsored a number of specialist courses for medical personnel. During the autumn of 1951, a special medical team traversed Canada conducting training for nurses in atomic, biological and chemical warfare. Also, an agreement is in effect with the St. John Ambulance Association to undertake a large-scale program of first-aid training of civil defence workers for which the Federal Government pays a per capita grant.

Federal assistance to the provinces by way of meeting the costs of administration and purchasing operational requirements consists of an annual grant amounting to eight cents per capita (based on 1951 Census figures) plus an additional six cents per capita in the main target areas. These federal grants must be equalled by provincial contributions. Also, the Federal Government has offered to bear one-third of the cost of standardizing fire-hose couplings. By mid-1952, Ontario and Alberta had accepted the offer and were proceeding with a standardization program and British Columbia expected to follow. Large quantities of training equipment

including rescue vehicles and fire-fighting pumps have been provided by the Federal Government to the provinces in order to foster their training programs. Draft agreements have also been forwarded to all provinces stating that the Federal Government will share with the provinces, on an equal basis, in paying workmen's compensation, where necessary, to a civil defence worker; an agreement to this effect has been signed with the Province of Ontario.

During the year ended Mar. 31, 1953, 15 civil defence manuals were published by the Federal Government to assist in the organization, training and general education of civil defence personnel, in addition to which a considerable amount of guiding literature was issued to assist provincial and local governments.

Each province has developed its own civil defence organization, patterned on that of the Federal Government. Certain provinces have conducted civil defence training courses similar to those of the Federal Government with the object of training local instructors and key personnel.

Civil defence organization at local level consists of the following services: police, fire, health, ambulance, welfare, rescue, engineer, public utilities, communication, transportation and information. Many of the main centres of population have made considerable advances in organization and training. An estimated 128,000 civil defence workers were reported on strength as at Mar. 31, 1953.

During 1951, an agreement was made between Canada and the United States whereby each country pledged itself to go to the assistance of the other in event of attack. A number of working groups have been formed to carry out specific tasks in the development of ways and means of carrying out this agreement. The Provinces of Canada, too, have discussed with adjoining States of the United States the working out of their mutual problems. Close liaison has also been kept with the United Kingdom and other NATO countries.

PART I.—SOURCES OF OFFICIAL INFORMATION

Section 1.—Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the decennial and quinquennial censuses are planned and statistical information of all kinds—federal and provincial—is centralized. In regard to information that is not mainly statistical, the individual Department concerned with the particular subject should be contacted as indicated in the Directory at pp. 1214-1238. Certain Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Information Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. (*See Index.*) The Departments of Agriculture, Resources and Development, and Mines and Technical Surveys, while not thus classed, are interested in the dissemination of information to a greater extent than most other Government Departments, though several of them have publicity branches or public relations divisions.

Government Departments, with few exceptions, issue their own lists of reports and publications. Departments are required by statute to publish annual reports, which are tabled each year in the House of Commons by their respective Ministers. However, for the purpose of this Section, only the services of the six information agencies mentioned above are described.

Section 2 has been prepared for the purpose of presenting to the reader a directory of all sources of information, federal and provincial, thereby directing him to the proper channels from which he may draw material relating to any particular subject.

The Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43). In 1948, this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (R.S.C. 1952, c. 257), subsequently amended in March, 1953 by 1-2 Eliz. II, c. 18.

The chief aims of the Dominion Bureau of Statistics are : (1) to furnish statistical data, bearing on Canada, for government and administration, whether municipal, provincial, national or international; and (2) to assist in meeting the needs of non-governmental users of statistics, arising from a growing awareness of the value of statistics to business efficiency and social security.

Inquiries.—Hundreds of individual requests for information are received in the Bureau each day, routed through the appropriate divisions and answered as expeditiously as possible. Since the field of effort, from the statistical side, deals with all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. Nevertheless, only inquiries of a statistical nature should be directed to the Dominion Bureau of Statistics.

Publications.—The Dominion Bureau of Statistics is the principal publication agency of the Federal Government; the subjects of its reports cover all aspects of the national economy.

The policy with regard to the distribution of publications is to extend the service to the public as widely as possible at a minimum cost. A special subscription rate of \$30 per annum entitles a subscriber to receive, as issued, a copy of each report, including the daily News Bulletin. Statistical information not of general interest is published in the form of Reference Papers or Memoranda for which additional annual subscription rates of \$5 and \$15, respectively, are charged. A discount of 25 p.c. is allowed on the excess over \$5 of single purchases totalling between \$5 and \$20; on single purchases of between \$20 and \$50, the discount is 50 p.c. of the excess over \$20.

A complete list of DBS publications is available from the Dominion Statistician. Orders for reports should be sent to the Dominion Bureau of Statistics, Ottawa, giving the correct title or titles of the publication or series of reports in which the applicant is interested and should include the necessary remittance in the form of a cheque or money-order made payable to the Receiver General of Canada.

Information Division, Department of External Affairs.—The Information Division has two functions: to promote within Canada interest in and knowledge of international affairs, and to make Canada and Canadian policies better known and understood abroad.

To perform the first function, the Division produces and distributes various documents on external affairs—statements of government policy and reports on related developments abroad and on the work of the Department generally. The Division also answers inquiries from Canadian sources on these subjects (except for inquiries from the press which are handled by the Department's Press Office) as well as requests for information about Canada made by Diplomatic Missions at Ottawa, by Canadian posts abroad, and by individuals and organizations in other countries.

Most of the information work abroad is done, however, by officials at Canadian posts. The Information Division assists by formulating and advising on information policy abroad, in an effort to ensure that this policy is related to the general objectives of Canadian foreign policy, and by producing and procuring material to keep Missions informed of developments within Canada. Journalists, and others who visit Canada to write of Canadian affairs, are given assistance from time to time by the Division; its responsibilities also include the co-ordination of the Government's activities in the field of cultural relations.

Information Branch, Department of Trade and Commerce.—For details see p. 1031.

Information Services Division, Department of National Health and Welfare.—The responsibility of this Division, in co-operation with other divisions of the Department of National Health and Welfare and provincial authorities, is the production and distribution of educational material on health, welfare, social security and civil defence, for use throughout the country. This information, issued in the English and French languages, includes books, pamphlets, periodicals, posters, exhibits, displays, radio dramatizations, press and magazine features and releases, as well as films and film-strips prepared in co-operation with the National Film Board. Books, pamphlets, posters and displays are distributed in Canada through provincial authorities. The most important periodicals published by the Division are *Canada's Health and Welfare* (monthly), *Canadian Nutrition Notes* (monthly), *Occupational Health Bulletin* (monthly), *Industrial Health Review* (semi-annually) and *Nutrition Bulletin* (annually).

Canadian Broadcasting Corporation.*—Radio broadcasting is an important medium of information to the public along with newspapers, films and other means of communication. Radio broadcasting in Canada is a combination of a publicly owned national system and privately owned local community stations, many of which are affiliated with the Canadian Broadcasting Corporation's networks.

Since its establishment in 1936, the Canadian Broadcasting Corporation has become one of the most effective channels through which information, official and unofficial, is broadcast to the people of Canada. Radio is relatively more important in Canada than in most other countries, because of the widely distributed population and the number of sparsely peopled areas, and the CBC has gradually bridged the gaps with high-powered transmitters designed to serve rural as well as urban areas. The CBC has also pioneered in the development of low-powered repeater stations, attached to the network lines, that serve areas unable, because of topographical conditions, to receive an adequate signal from any existing station.

News broadcasts and information programs occupy a considerable proportion of national and regional network time and include news, drama, informative talks, children's programs, school broadcasts, public-service broadcasts, sports, women's activities, etc. Listeners have a very wide range of radio fare, since the CBC not only produces its own programs in the various production centres across Canada, but brings in selected programs from the networks in the United States, the British Broadcasting Corporation, and other national radio systems. The CBC maintains a bureau at London, England, and at United Nations Headquarters, New York, and is credited with having done more to inform listeners of the United Nations' activities than any other broadcasting system.

Through the International Shortwave Service, operated by the CBC on behalf of the Canadian Government, programs are broadcast in sixteen languages: English, French, German, Dutch, Danish, Norwegian, Swedish, Finnish, Italian, Spanish, Portuguese, Czech, Slovak, Russian, Ukrainian and Polish. The CBC International Service broadcasts information abroad on life and economic conditions in Canada as part of the general information plan for promoting a better understanding of Canada in other countries. The CBC shortwave transmitters at Sackville, N.B., transmit a signal unequalled in Europe by any other transmitted from the North American Continent.

* See also pp. 335-337 and pp. 887-894.

The National Film Board.—The National Film Board provides information on a great variety of subjects in the form of films, film-strips and still photos. In keeping with its terms of reference, the Board's products are both informative and interpretative and are widely distributed, theatrically and non-theatrically. (See also Educational and Cultural Functions of the National Film Board, pp. 334-335.)

As a service to government departments, the Board maintains a film preview library of 4,000 prints where films may be screened with a view to purchase or for informational purposes. Some 500 film-strips are catalogued. The Board also maintains libraries of films on specialized subjects such as health, sociology, medicine and industry.

The Board has over 25,000 prints on deposit in more than 300 local libraries across the country. Additions to the libraries are circulated in preview blocks to film councils and circuit users before being deposited in a central library. Approximately 20,000 prints have been made available in libraries abroad, both in posts of the Departments of External Affairs and Trade and Commerce and in universities and other loan agencies. Libraries of films and film-strips are maintained in the Board's offices at New York and Chicago, U.S.A., and at London, England.

The Board's library of approximately 100,000 still photos serves government departments, commercial photographers and newspapers and periodicals in Canada and abroad.

Section 2.—Directory of Sources of Official Information (Federal and Provincial)

To make the best use of the Directory of Sources of Government Official Information, it is necessary that the reader understands the broad differences in function between federal and provincial departments and their separate fields of work.

Certain fields of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, census of population, national defence, etc., are constitutionally federal affairs and, in such fields, the respective Departments at Ottawa are the proper sources with which to communicate. Other fields of effort, such as the administration of lands and natural resources, education, roads and highways, and health and hospitals, are the responsibility of the provinces under the British North America Act, but certain Federal Departments are also concerned with specific aspects of these subjects and, as is the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole.

As a general guide to the public, it may be pointed out that questions relating to the actual development and administration of resources should be forwarded to the particular provinces concerned. The Federal Government, while not administering the resources within provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data, on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of live stock and the improvement of strains, on agricultural marketing and on crop yields are cases in

point; in forestry, questions of forest research, forest-fire protection and reforestation offer good examples. Inquiries directed to federal sources for information not of a statistical nature should, as a general rule, be sent to the individual Departments listed in the Directory; in the case of statistical information, inquiries should be addressed to the Dominion Bureau of Statistics, Ottawa.

Under the provisions of the Public Printing and Stationery Act, the Queen's Printer and Controller of Stationery has charge of the sale of all official publications of Parliament and the Government of Canada that are issued for sale, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them without payment.

The Queen's Printer and Controller of Stationery issues the *Daily Checklist of Government Publications*, published mainly for administrative convenience. It records all Federal Government publications immediately upon release, for the information of the public service, libraries, etc. All those who are authorized by law or regulation to receive free copies of government publications receive the *Daily Checklist* automatically and without charge. Other persons desiring the service may purchase an annual subscription to the *Daily Checklist*, to be forwarded daily or in weekly batches, as requested.

The *Monthly Catalogue of Canadian Government Publications*, also issued by the Queen's Printer and Controller of Stationery, is a comprehensive listing of all official publications, public documents and papers, not of a confidential nature, printed or "processed" at government expense.

An *Annual Catalogue* comprising all publications listed in the *Monthly Catalogue* will be issued Jan. 15, 1954. This will be a consolidation by departments of all active titles (older publications still available and not superseded by later editions) issued during 1953 and in previous years. Separate prints of departmental lists of publications included in the *Annual Catalogue* will also be available at the same time.

The Queen's Printer and Controller of Stationery publishes subject catalogues and special bulletins advertising new government publications. The titles of some publications available for free distribution, and obtainable from the issuing federal departments, are listed in the *Daily Checklist* and *Monthly Catalogue*. Lists of publications are in some cases available from Government Departments.

Most provincial government printed publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:—

Newfoundland.....	St. John's	Ontario.....	Toronto
Prince Edward Island...	Charlottetown	Manitoba.....	Winnipeg
Nova Scotia.....	Halifax	Saskatchewan.....	Regina
New Brunswick.....	Fredericton	Alberta.....	Edmonton
Quebec.....	Quebec	British Columbia.....	Victoria

Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration and Lands Branch, Department of Resources and Development, Ottawa.

PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore, the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1954 Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later Census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (*) are available in reprint form from the Dominion Statistician at the price quoted.

PART IV.—FEDERAL LEGISLATION, 1952-53

This classified list of federal legislation has been compiled from the Statutes. Naturally, in summarizing material of this kind it is not always easy to convey the full implication of the legislation. The reader who is interested in any specific Act is, therefore, referred to the Statutes of Canada at the given volume and chapter.

Legislation of the Seventh Session of the Twenty-First Parliament, Nov. 20, 1952, to May 14, 1953

Subject, Chapter and Date of Assent	Synopsis
1-2 Eliz. II	
Agriculture—	
26 May 14	<i>An Act to amend the Canadian Wheat Board Act, 1935</i> , extends until Aug. 1, 1957, certain vital sections of the Act that would otherwise expire at the end of the current crop year.
36 May 14	<i>An Act to amend the Farm Improvement Loans Act, 1944</i> , provides for the closing out on Mar. 31, 1953, instead of Feb. 28, 1954, the three-year pool of loans guaranteed by the Government under the Act and provides for a new three-year pool commencing Apr. 1, 1953. The maximum amount of bank loans made in the new period that will be guaranteed under the Act will be \$300,000,000.
46 May 14	<i>An Act to amend the Prairie Farm Assistance Act, 1939</i> , provides that certain designated Crown lands in Manitoba and Saskatchewan be made eligible with respect to the assistance provided under the Act.

**Legislation of the Seventh Session of the Twenty-First Parliament,
Nov. 20, 1952, to May 14, 1953—continued**

Subject, Chapter and Date of Assent	Synopsis
Constitution and Government—	
8 Feb. 11	<i>An Act to amend the Representation Act, 1952</i> , changes the name of Swift Current constituency to Swift Current-Maple Creek.
9 Feb. 11	<i>An Act respecting the Royal Style and Titles</i> expresses the assent of the Parliament of Canada to an exercise of the Royal Prerogative to establish the Royal Style and Titles for Canada as part of a general establishment of the Royal Titles in countries of the Commonwealth. Effect of the Bill is to designate Queen Elizabeth II as "Queen of Canada".
33 May 11	<i>An Act to amend the Emergency Powers Act</i> provides for the continuation of the Act for a further period of one year, i.e., from May 31, 1953, to May 31, 1954.
53 May 14	<i>The Yukon Act</i> replaces former legislation providing for the government of the Yukon Territory; it provides for the appointment of a Commissioner and the election of a Council, defines the legislative powers of the Commissioner in Council, provides for the administration of justice, the beneficial use of certain lands, etc.
Finance—	
11 Mar. 31	<i>Appropriation Act, No. 1, 1953</i> , grants certain sums of money to be paid out of the Consolidated Revenue Fund for defraying stated expenses of the public service for the year ending Mar. 31, 1954.
12 Mar. 31	<i>Appropriation Act, No. 2, 1953</i> , grants the payment of \$77,680,383 out of the Consolidated Revenue Fund for defraying stated expenses of the public service for the year ending Mar. 31, 1953.
31 May 14	<i>An Act to amend the Customs Tariff</i> , implements Budget resolutions relating to the Customs Tariff.
34 May 14	<i>An Act to amend the Excise Act, 1934</i> , amends the schedule to the Excise Act respecting excise duty and customs duty on cigarettes.
35 May 14	<i>An Act to amend the Excise Tax Act</i> gives effect to Budget resolutions.
40 May 14	<i>An Act to amend the Income Tax Act</i> gives effect to Budget resolutions.
47 May 14	<i>The Public Service Superannuation Act</i> revises the Civil Service superannuation legislation.
54 May 14	<i>Appropriation Act, No. 3, 1953</i> , grants certain sums of money to be paid out of the Consolidated Revenue Fund for defraying stated expenses of the public service for the year ending Mar. 31, 1954.
Fisheries—	
15 Mar. 31	<i>The Coastal Fisheries Protection Act</i> revises completely the Customs and Fisheries Protection Act enacted in 1868 and brings the legislation into line with present-day conditions and practice.
37 May 14	<i>An Act to amend the Fisheries Research Board Act</i> increases the membership of the Board from 15 to 19 and provides for the appointment of a permanent chairman.
43 May 14	<i>The Northern Pacific Halibut Fishery Convention Act</i> ratifies the Convention between Canada and the United States for the preservation of the halibut fishery of the Northern Pacific Ocean and Bering Sea, signed Mar. 2, 1953, replacing the 1937 Convention, and provides the necessary legislation to implement the new Convention.
44 May 14	<i>The North Pacific Fisheries Convention Act</i> approves and confirms the International Convention for the High Seas Fisheries of the North Pacific Ocean, signed by Canada, the United States and Japan in Tokyo on May 9, 1953, and provides legislation for carrying out Canada's obligation under the Convention.
Justice—	
2 Feb. 11	<i>An Act to amend the Canada Evidence Act</i> permits an affidavit with respect to the photographic copy of a document to be sworn before a commissioner for oaths.
4 Feb. 11	<i>An Act to amend the Judges Act, 1946</i> , authorizes payment of salary to an additional judge of the Supreme Court of British Columbia.

**Legislation of the Seventh Session of the Twenty-First Parliament,
Nov. 20, 1952, to May 14, 1953—continued**

Subject, Chapter and Date of Assent	Synopsis
Justice—concluded 7 Feb. 11	<i>An Act to amend the Prisons and Reformatories Act</i> revises the Act with respect to the imprisonment of young male offenders in the Young Offenders Unit of Oakalla Prison Farm, B.C., and the transfer of such offenders from that Unit or New Haven to the common gaol or among these institutions as deemed expedient.
29 May 14	<i>An Act to amend the Criminal Code</i> continues the provision that, until other arrangements are made, the penitentiary operated by the Province of Newfoundland will continue to be the place of confinement for persons who, in that Province, are sentenced to a term of under two years.
30 May 14	<i>The Crown Liability Act</i> makes the Crown liable for damages in respect to wrongdoing by servants of the Crown.
Labour— 16 Mar. 31	<i>An Act to amend the Merchant Seamen Compensation Act</i> provides for an upward revision in the scale of benefits payable under the Act.
19 May 14	<i>The Canada Fair Employment Practices Act</i> is designed to prevent discrimination in regard to employment and membership in trade unions by reason of race, national origin, colour or religion.
51 May 14	<i>An Act to amend the Unemployment Insurance Act, 1940</i> , provides for the payment of unemployment insurance benefit to insured persons who, while otherwise unemployed and entitled to benefit, become incapacitated for work by reason of illness or injury.
National Defence and Veterans Affairs— 6 Feb. 11	<i>An Act to amend the National Defence Act</i> provides for the appointment of an Associate Minister of National Defence.
24 May 14	<i>The Canadian Forces Act, 1953</i> , makes certain amendments concerning the Armed Forces to the National Defence Act, the Defence Services Pension Act, and the Canada Elections Act.
27 May 14	<i>The Children of War Dead (Education Assistance) Act</i> provides assistance for the higher education of children of certain deceased members of the Armed Forces and of other persons.
52 May 14	<i>An Act to amend the Veterans Benefit Act, 1951</i> , extends until the last day of the first session of Parliament 1954 the date of the expiration of the Act.
Trade and Commerce— 3 Feb. 11	<i>An Act to amend the Companies' Creditors Arrangement Act, 1953</i> , limits the application of the Act to companies that have outstanding issues of bonds or other evidence of indebtedness issued under a trust deed running in favour of a trustee.
5 Feb. 11	<i>An Act to amend the Loan Companies Act</i> allows companies to which the Act applies to invest in bonds issued by the International Bank for Reconstruction and Development.
10 Feb. 11	<i>An Act to amend the Trust Companies Act</i> allows companies to which the Act applies to invest in bonds issued by the International Bank for Reconstruction and Development.
28 May 14	<i>The Co-operative Credit Associations Act</i> provides for the organization, specifies the powers and provides for the supervision of central co-operative credit associations that may be incorporated by Parliament.
49 May 14	<i>The Trade Marks Act</i> relates to trade marks and unfair competition and revises and consolidates the law in that respect.
Transportation and Communi- cations— 1 Feb. 11	<i>An Act respecting the appointment of Auditors for National Railways</i> appoints independent auditors for 1953 to make a continuous audit of the national railway accounts.
13 Mar. 31	<i>An Act to amend the Canadian Overseas Telecommunication Corporation Act</i> permits the Corporation to accumulate a surplus to be used for capital development and expansion purposes, provide a surplus for contingencies, etc.

**Legislation of the Seventh Session of the Twenty-First Parliament,
Nov. 20, 1952, to May 14, 1953—concluded**

Subject, Chapter and Date of Assent	Synopsis
Transportation and Communi- cations—concl.	
14 Mar. 31	<i>An Act to amend the Canadian Vessel Construction Assistance Act</i> permits ship-owners to include an aggregate amount of certain deductions permitted (reserves for expenses to be incurred in connection with special surveys required under the Shipping Act) in computing income for the taxation year in which the survey is completed, or in which the vessel is sold, lost or destroyed as the case may be, or where circumstances are such that the survey will not likely be completed.
17 Mar. 31	<i>An Act respecting the Saint John Bridge and Railway Extension Company</i> provides that, upon repayment of a loan to the Government, the title to the above properties shall pass to the Canadian Pacific Railway Company.
20 May 14	<i>An Act to amend the Canada Shipping Act, 1934</i> , makes certain technical changes found necessary because of the advance of science in relation to the operation of ships.
22 May 14	<i>An Act to amend the Canadian Broadcasting Act, 1936</i> , implements the Budget announcement with respect to the transfer to the Canadian Broadcasting Corporation of the revenue derived under the Excise Tax Act on radio and television sets and equipment.
25 May 14	<i>The Canadian National Railways Financing and Guarantee Act, 1953</i> , authorizes the provision of money for certain capital expenditures of the C.N.R. during the year 1953, and authorizes the guarantee of certain securities to be issued by the company.
45 May 14	<i>An Act to amend the Post Office Act</i> authorizes the Postmaster General to increase amounts payable under contracts for conveying mail.
48 May 14	<i>An Act to amend the Radio Act, 1938</i> , implements the Budget announcement respecting the elimination of the licence fee for private radio receiving stations.
50 May 14	<i>An Act to amend the Trans-Canada Air Lines Act, 1937</i> , provides for the enlargement of the Board of Directors, increases the powers of the Corporation and adjusts the capital structure of the Corporation in such a way as to conform to normal commercial practice. Under the provisions of this Act, Trans-Canada Air Lines (Atlantic) Limited ceased to exist.
Miscellaneous—	
18 Mar. 31	<i>An Act to amend the Statistics Act</i> makes certain changes regarding the secrecy section of the Act, items to be covered by the census of population and agriculture, preparation of reports on shipping on inland waterways, and collection of criminal statistics.
21 May 14	<i>The Canada Water Conservation Assistance Act</i> provides for federal contributions up to 37.5 p.c. of the cost of major water conservation projects, the remaining portion to be borne by the provincial government concerned or jointly by the provincial government and local government affected.
23 May 14	<i>An Act to amend the Canadian Citizenship Act</i> , among other changes, co-ordinates the Canadian Citizenship Act in some respects with the Immigration Act in order that the two may be administered without conflict by the same officials.
32 May 14	<i>An Act to amend the Emergency Gold Mining Assistance Act</i> provides greater assistance to the gold-mining industry in meeting its special difficulties.
38 May 14	<i>The Food and Drugs Act</i> revises and consolidates legislation concerning food, drugs, cosmetics and therapeutic devices.
39 May 14	<i>The Historic Sites and Monuments Act</i> places the Historic Sites and Monuments Board of Canada on a statutory basis; the composition, powers and duties of the Board are laid down.
41 May 14	<i>An Act to amend the Indian Act</i> makes the real and personal property of an Indian subject to attachment, levy, seizure, distress or execution.
42 May 14	<i>An Act to amend the National Housing Act, 1944</i> , increases appropriation for home ownership loans from \$300,000,000 to \$500,000,000; increases appropriation for rental housing loans from \$150,000,000 to \$250,000,000; and makes certain changes in the slum clearance provisions of the Act.

PART V.—CANADIAN CHRONOLOGY, 1867-1953

Events in the General Chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49. References regarding federal or provincial elections or changes in legislatures or ministries are not included in the following chronology since such information is given in Chapter II on Constitution and Government and in Appendices I and II.

1867. Mar. 29, Royal Assent given to the British North America Act. July 1, The Act came into force; Union of the Province of Canada, Nova Scotia and New Brunswick as the Dominion of Canada; Upper and Lower Canada made separate provinces named Ontario and Quebec; Viscount Monck, first Governor General; Sir John A. Macdonald, Prime Minister. Nov. 6, Meeting of the first Dominion Parliament.
1868. July 31, The Rupert's Land Act authorizing the acquisition by Canada of the Northwest Territories.

and damage estimated at \$4,000,000. June 1, Her Majesty's Coronation Honours List contained names of 36 members of Canadian Armed Forces and 8 civilians. British expedition reached peak of Mount Everest. June 2, Her Majesty Queen Elizabeth II crowned at Westminster Abbey. Official ceremonies held at Ottawa and other Canadian centres to honour the Queen on her Coronation Day. June 3-9, Commonwealth Prime Ministers met at London; the Rt. Hon. Louis St. Laurent represented Canada. July 13-Aug. 22, Shakespearean Festival held at Stratford, Ont. July 26, United Nations and communist delegates signed Korean armistice at Panmunjom (9 p.m., E.D.T.). July 27, Korean war hostilities ceased at 9 a.m., E.D.T. Aug. 4, First Allied war prisoners returned to freedom at Freedom Village, Korea; one Canadian included. Aug. 17-28, United Nations General Assembly held a session on the question of peaceful settlement of Korean problems and aid to Korean people; Hon. L. B. Pearson presided. Sept. 6, Final exchange of prisoners in Korea; 30 Canadians freed. Sept. 15-Dec. 9, Eighth session of United Nations General Assembly; Madam Vijaya Pandit of India elected president. Sept. 30, McGill University announced development of a radar early-warning system for North American protection against air attack. Oct. 9, Defence Minister announced formation of the 1st Canadian Division — the Army's first peacetime division. Oct. 15, Trans Mountain oil pipeline from Edmonton to Vancouver completed. Oct. 16-18, Big Three (U.K., U.S. and France) Conference at London, England, to discuss Trieste situation. Oct. 20, Canada's first privately owned television station in operation at Sudbury, Ont. Nov. 5, The power authority of New York State designated by President Eisenhower as the United States partner with Ontario in the construction of the St. Lawrence River power project. Nov. 12, U.K. Parliament passed Regency Act making Duke of Edinburgh regent in the event of Queen Elizabeth's death or incapacity. Nov. 12, Agreement between U.S. and Canadian Governments re establishment of the St. Lawrence River Joint Board of Engineers announced; formed to plan construction of power works in the international rapids section of the St. Lawrence River. Nov. 13-14, U.S. President Eisenhower and Mrs. Eisenhower visited Ottawa. Nov. 23, Queen Elizabeth II and the Duke of Edinburgh started on tour of eastern Commonwealth countries. Dec. 4-7, Conference of U.K. Prime Minister Churchill, U.S. President Eisenhower and France's Premier Laniel in Bermuda. Dec. 7, Mercantile Bank of Canada commenced business; head office at Montreal. Dec. 8, U.S. President Eisenhower addressed United Nations General Assembly on atomic proposals. Dec. 9, U.K., U.S. and France notified U.S.S.R. of their desire for a conference of foreign ministers of the four countries. Dec. 14-16, NATO Council session held at Paris; Hon. L. B. Pearson addressed gathering. Dec. 16, Royal Assent given to Bill respecting formation of the Department of Northern Affairs and National Resources.

PART VI. — STATISTICAL SUMMARY OF THE PROGRESS OF CANADA, 1871-1952

In the following summary, the statistics of foreign trade, shipping, the Post Office, the public debt, revenue and expenditure, and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1901; subsequently to years ended Mar. 31, except in the case of trade, where calendar-year figures are given for 1931 and later years. Agriculture, dairying, mineral, manufacturing, banking, insurance, loan and trust companies, construction, road-transportation, vital, hospital, and immigration statistics relate to the calendar years, and railway and fisheries statistics to the years ended June 30, 1871-1911, and to the calendar years 1921-52. Canal statistics are those of the navigation seasons. Telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

¹⁰ On farms only.¹¹ Figures for the decennial census years 1881-1921 are for the immediately preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese; quantities have been calculated by reckoning cheese at 10 cents per lb. and butter at 25 cents per lb.¹² Data shown for 1949-51 represent cheddar and other cheese made from whole milk; prior to 1942 the figures included other cheese for Quebec only.¹³ Prior to 1921 this item does not include skim milk and buttermilk.¹⁴ Years ended Mar. 31 prior to 1931.

¹ As from 1932 the values include exchange equalization. ² 1887. ³ 1898. ⁴ 1899. ⁵ 1874. ⁶ 1892. ⁷ Includes other items not specified. ⁸ 1886. ⁹ Excludes Newfoundland. ¹⁰ Years ended Sept. 30. ¹¹ The statistics of manufactures in 1871, 1881 and 1891 include all establishments irrespective of the number of employees. From 1901, statistics are for establishments with five hands or over. The figures shown for census years prior to 1921 are for the preceding year. From 1922, statistics are exclusive of construction hand trades, repair and custom work. Figures for 1931-51 include non-ferrous metal smelting not included in earlier years. ¹² Since 1924 the net value of production is computed by subtracting the cost of fuel and electricity

APPENDIX I

The information normally appearing in Subsections 1 and 2 of the Federal Government Section of Chapter II on Constitution and Government (*see* p. 45) has been taken into this volume as Appendix I in order to permit the inclusion of information becoming available following the General Election of Aug. 10, 1953.

Section 1.—The Federal Government

Subsection 1.—The Executive

The Crown.—The British North America Act provides that “the Executive Government and authority of and over Canada is vested in the Queen”. The functions of the Crown, which are substantially the same as those of the Queen in relation to the Government of the United Kingdom, are discharged by the Governor General in accordance with established principles of responsible government. The practical executive functions of government are exercised by the Cabinet.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries, the Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953, the title of the Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position and, in December 1952, it was decided by the Prime Ministers of the Commonwealth countries meeting at London to establish new forms of title for each country. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 29, 1953. The title of the Queen, so far as Canada is concerned, now is:—

“Elizabeth the Second, by the grace of God of the United Kingdom, Canada and her other realms and territories Queen, Head of the Commonwealth, Defender of the Faith”.

The Governor General.—The Governor General, appointed by the Queen on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of the Queen in relation to the Government of Canada, under the Letters Patent constituting the Office of Governor General and the provisions of the British North America Acts, 1867 to 1952. Acting under the recommendations of his responsible advisers, he summons, prorogues and dissolves Parliament and assents to Bills and exercises other executive functions.

1.—Governors General of Canada since Confederation

Name	Date of Appointment	Date of Assumption of Office
VISCOUNT MONCK, G.C.M.G.	June 1, 1867	July 1, 1867
LORD LISGAR, G.C.M.G.	Dec. 29, 1868	Feb. 2, 1869
The EARL OF DUFFERIN, K.P., K.C.B., G.C.M.G.	May 22, 1872	June 25, 1872
The MARQUIS OF LORNE, K.T., G.C.M.G.	Oct. 5, 1878	Nov. 25, 1878
The MARQUIS OF LANSDOWNE, G.C.M.G.	Aug. 18, 1883	Oct. 23, 1883
LORD STANLEY OF PRESTON, G.C.B.	May 1, 1888	June 11, 1888
The EARL OF ABERDEEN, K.T., G.C.M.G.	May 22, 1893	Sept. 18, 1893
The EARL OF MINTO, G.C.M.G.	July 30, 1898	Nov. 12, 1898
EARL GREY, G.C.M.G.	Sept. 26, 1904	Dec. 10, 1904
FIELD MARSHAL H.R.H. THE DUKE OF CONNAUGHT, K.G.	Mar. 21, 1911	Oct. 13, 1911
The DUKE OF DEVONSHIRE, K.G., G.C.M.G., G.C.V.O.	Aug. 19, 1916	Nov. 11, 1916
GENERAL THE LORD BYNG OF VIMY, G.C.B., G.C.M.G., M.V.O.	Aug. 2, 1921	Aug. 11, 1921
VISCOUNT WILLINGDON OF RATTON, G.C.S.I., G.C.I.E., G.B.E.	Aug. 5, 1926	Oct. 2, 1926
The EARL OF BESSBOROUGH, G.C.M.G.	Feb. 9, 1931	Apr. 4, 1931
LORD TWEEDSMUIR OF ELSFIELD, G.C.M.G., G.C.V.O., C.H.	Aug. 10, 1935	Nov. 2, 1935
MAJOR-GENERAL THE EARL OF ATHLONE, K.G., P.C., G.C.B., G.C.M.G., G.C.V.O., D.S.O.	Apr. 3, 1940	June 21, 1940
FIELD MARSHAL VISCOUNT ALEXANDER OF TUNIS, K.G., G.C.B., G.C.M.G., C.S.I., D.S.O., M.C., A.D.C.	Aug. 1, 1945	Apr. 12, 1946
The Right Honourable VINCENT MASSEY, C.H.	Jan. 24, 1952	Feb. 28, 1952

The Cabinet.—The Cabinet is a committee of the Queen's Privy Council for Canada and is responsible to Parliament. By convention, the members of the Cabinet are members of either the House of Commons or the Senate. Normally, most of the Cabinet members have seats in the House of Commons; at Dec. 31, 1953, the Government Leader in the Senate was the only member who was not a member of the House of Commons.

The Cabinet initiates nearly all public Bills placed before Parliament and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the representatives of the people. Its members are chosen by the Prime Minister and each generally assumes charge of one of the various departments of government, although a Minister may hold more than one portfolio at the same time, or may be without portfolio.

2.—Prime Ministers since Confederation

Ministry	Prime Minister	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD	July 1, 1867 - Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE	Nov. 7, 1873 - Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD	Oct. 17, 1878 - June 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ARBOTT	June 16, 1891 - Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON	Dec. 5, 1892 - Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL	Dec. 21, 1894 - Apr. 27, 1896
7	Hon. Sir CHARLES TUPPER	May 1, 1896 - July 8, 1896
8	Rt. Hon. Sir WILFRID LAURIER	July 11, 1896 - Oct. 6, 1911
9	Rt. Hon. Sir ROBERT LAIRD BORDEN	Oct. 10, 1911 - Oct. 12, 1917 (Conservative Administration)
10	Rt. Hon. Sir ROBERT LAIRD BORDEN	Oct. 12, 1917 - July 10, 1920 (Unionist Administration)
11	Rt. Hon. ARTHUR MEIGHEN	July 10, 1920 - Dec. 29, 1921 (Unionist—"National Liberal and Conservative Party")
12	Rt. Hon. WILLIAM LYON MACKENZIE KING	Dec. 29, 1921 - June 28, 1926
13	Rt. Hon. ARTHUR MEIGHEN	June 29, 1926 - Sept. 25, 1926
14	Rt. Hon. WILLIAM LYON MACKENZIE KING	Sept. 25, 1926 - Aug. 6, 1930
15	Rt. Hon. RICHARD BEDFORD BENNETT	Aug. 7, 1930 - Oct. 23, 1935
16	Rt. Hon. WILLIAM LYON MACKENZIE KING	Oct. 23, 1935 - Nov. 15, 1948
17	Rt. Hon. LOUIS STEPHEN ST. LAURENT	Nov. 15, 1948 -

3.—Members of the Seventeenth Ministry, as at Dec. 31, 1953

(According to precedence of Ministers)

NOTE.—A complete list of the members of Federal Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in subsequent editions of the Year Book.

and Development on Dec. 16, 1953.

² Name of Office changed from Resources

Administrative duties in the various departments of government became so burdensome during World War II that Parliamentary Assistants were appointed to assist six Cabinet Ministers with their parliamentary duties. The practice was extended after the War and at Dec. 31, 1953, there were 12 Parliamentary Assistants, as follows:—

To Prime Minister.....	W. S. WEIR
To Minister of Agriculture.....	ROBERT MCCUBBIN
To Minister of Fisheries.....	J. WATSON MACNAUGHT
To Minister of Veterans Affairs.....	C. E. BENNETT
To Minister of National Defence.....	J. A. BLANCHETTE
To Minister of Transport.....	L. LANGLOIS
To Postmaster General.....	T. A. M. KIRK
To Minister of Finance.....	W. M. BENIDICKSON
To Minister of National Health and Welfare.....	F. G. ROBERTSON
To Minister of Defence Production.....	JOHN H. DICKEY
To Secretary of State for External Affairs.....	R. PINARD
To Minister of Public Works.....	M. BOURGET

The Privy Council.—The Queen's Privy Council for Canada is composed of about seventy members who are sworn of the Council by the Governor General, on the advice of the Prime Minister, and who retain their membership for life. The Council consists, chiefly, of present and former Ministers of the Crown. It does

not meet as a functioning body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by the Ministers who constitute the Cabinet of the day.

4.—Members of the Queen's Privy Council for Canada, According to Seniority Therein, as at Dec. 31, 1953

NOTE.—In this list the prefix "The Rt. Hon." indicates membership in the United Kingdom Privy Council. Clerk of the Privy Council and Secretary to the Cabinet, R. B. BRYCE; Assistant Clerk of the Privy Council, A. M. HILL.

¹ The ordinary legal limit of duration for each Parliament is five years. ² Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (B.N.A. Act, Sect. 50). ³ Date of general election.

⁴ Writs returnable. ⁵ Dissolution of Parliament. ⁶ During the war years Parliament was kept in almost continuous session. When prorogation took place it was followed immediately by a new session. During long adjournments provision was made whereby the Speaker could reconvene Parliament before the date previously set for reassembly.

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada, consisting of the Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice, most Public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of Public Bills in the Senate. Private Bills usually originate in the Senate. (See pp. 1255-1258 for current legislation.)

Under Sect. 91 of the British North America Acts, 1867-1952, the legislative authority of the Parliament of Canada extends to the following matters: the amendment of the Constitution of Canada subject to certain exceptions; the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and

naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses, and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks, and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by this Act assigned exclusively to the legislatures of the provinces.

In addition, under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures, although in the event of conflict federal legislation is paramount. By the British North America Act, 1951 (14-15 Geo. VI, c. 32), it was declared that the Parliament of Canada might make laws in relation to old age pensions in Canada, but no such law shall affect the operation of any provincial laws in relation to old age pensions.

The Senate.—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is traced in the 1940 Year Book, pp. 47-49, and is summarized by provinces in Table 6.

The House of Commons.—In Sect. 37 of the British North America Act of 1867 it was provided that "The House of Commons shall, subject to the provisions of this Act, consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia, and fifteen for New Brunswick". Further, under Sect. 51, it was enacted that, after the completion of the 1871 Census and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to certain rules set out in the original Act.

The representation of the provinces in the Parliament of Canada as at 1867 and the readjustments that took place with the admission of the newer provinces into Confederation and with each decennial census up to 1931, are outlined in the 1946 Year Book, pp. 57-59. The postponement of redistribution of parliamentary constituencies following the 1941 Census, together with the Address of both Houses of Parliament to the King requesting that a Bill for the required amendment to Sect. 51 of the British North America Act be laid before the United Kingdom Parliament, the wording of the new Section, and the passage of the Representation Act, 1947 (11 Geo. VI, c. 71), providing for an increase of membership from 245 to 255 are described in the 1951 Year Book, p. 65.

Under the Terms of Union of Newfoundland with Canada (*see* 1951 Year Book, pp. 56-57), provision was made for the Province of Newfoundland to be represented by seven members in the House of Commons. This increased the number of Members of Parliament to 262.

By c. 15 of the statutes of 1952, the Parliament of Canada, acting under the authority conferred by the British North America Act of 1949, amended Sect. 51 of the British North America Act providing for a new method of readjustment of representation in the House of Commons. Pursuant to this amendment a new Representation Act was passed (1 Eliz. II, c. 48) providing for a total of 265 members of the House of Commons (*see* pp. 1288-1289 for details).

The number of representatives of each province elected at each of the 22 general elections since Confederation is given in Table 8.

Redistribution of Federal Parliamentary Constituencies, 1952.—Results of the Census of 1951 necessitated a readjustment in the representation of the House of Commons pursuant to the provisions of the British North America Acts, 1867 to 1951, and a Bill (No. 8) was introduced by the Prime Minister on Mar. 10, 1952, entitled: "The Representation Act, 1952". This Bill was withdrawn on June 25, 1952.

Between these two dates the Committee on Redistribution recommended to the House the presentation of two Bills: (1) a Bill to amend the British North America Act to provide for new rules with regard to redistribution; and (2) a new Representation Bill which would be in accordance with those rules.

The British North America Act, 1952 (Bill 331), was introduced in the House on June 10, 1952, and received Royal Assent on June 18, 1952. The Minister of Citizenship and Immigration stated on its second reading: "The opportunity to amend the B.N.A. Act and our constitution by an Act of this Parliament arose in 1949 by the passing of an address requesting the insertion in the B.N.A. Act of a clause which would permit the amendment of the constitution by an Act of this Parliament".

The new Act (1 Eliz. II, c. 15) repeals Sect. 51 of the British North America Act and substitutes therefor as follows:—

"Sect. 51.—(1) Subject as hereinafter provided, the number of members of the House of Commons shall be two hundred and sixty-three and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following rules:—

"1. There shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by two hundred and sixty-one and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder, if any, after the said process of division.

"2. If the total number of members assigned to all the provinces pursuant to rule one is less than two hundred and sixty-one, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under rule one commencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is two hundred and sixty-one.

"3. Notwithstanding anything in this section, if upon completion of a computation under rules one and two, the number of members to be assigned to a province is less than the number of senators representing the said province, rules one and two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.

"4. In the event that rules one and two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which rules one and two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which rules one and two have ceased to apply and the number two hundred and sixty-one shall be reduced by the number of members assigned to such province pursuant to rule three.

"5. On any such readjustment the number of members for any province shall not be reduced by more than fifteen per cent below the representation to which such province was entitled under rules one to four of this subsection at the last preceding readjustment

of the representation of that province, and there shall be no reduction in the representation of any province as a result of which that province would have a smaller number of members than any other province that according to the results of the then last decennial census did not have a larger population; but for the purposes of any subsequent readjustment of representation under this section any increase in the number of members of the House of Commons resulting from the application of this rule shall not be included in the divisor mentioned in rules one to four of this subsection.

"6. Such readjustment shall not take effect until the termination of the then existing Parliament.

"(2) The Yukon Territory as constituted by chapter forty-one of the statutes of Canada, 1901, shall be entitled to one member, and such other part of Canada not comprised within a province as may from time to time be defined by the Parliament of Canada shall be entitled to one member."

On June 27, 1952, the Minister of Citizenship and Immigration introduced Bill 393, an Act to readjust the Representation in the House of Commons. Royal Assent was given on July 4 to the Representation Act, 1952 (I Eliz. II, c. 48). As a result of this legislation, the total membership of the House of Commons was increased to 265 members, to be effective at the following general election. The representation of the various provinces will be, according to Sect. 2 of the Act, as follows:—

"Sect. 2. Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members."

The Opposition.—The Opposition occupies an essential place in constitutions based on the British parliamentary system. Like many other institutions such as that of the premiership, for instance, it is founded on the unwritten customs that have been accepted and become firmly established.

The choice of the Canadian electorate not only determines who shall govern Canada but, by deciding which party receives the second largest number of seats in the House of Commons, it designates which of the major parties becomes the Official Opposition. The function of the Leader of the Opposition is to offer intelligent and constructive criticism of the Government of the day.

When criticism by the Opposition becomes sufficiently effective it can overthrow the existing Government and the Leader of the Opposition might then, as a result of the ensuing election, become Prime Minister.

Although the position of Leader of the Opposition is not recognized in the British North America Act, it received statutory acknowledgment in Canada in 1927. The Senate and House of Commons Act of that year provided for an annual salary to be paid to the Leader of the Opposition in addition to his indemnity as a Member of the House. (*See p. 1296.*)

9.—Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Twenty-Second General Election, Aug. 10, 1953, and Revised to Dec. 31, 1953.

Speaker.....The Hon. L. René Beaudoin
 Clerk of the House of Commons.....Leon J. Raymond
 Leader of the Opposition.....The Hon. George A. Drew

NOTE.—The vote is summarized by provinces in Table 10, p. 1295. The leaders of the political parties are indicated by asterisks (*). For Parliamentary Assistants, see p. 1282. This information, except the population of constituencies, has been supplied by the Chief Electoral Officer, Ottawa. Party affiliations are unofficial: Lib.=Liberal; P.C.=Progressive Conservative; C.C.F.=Co-operative Commonwealth Federation; S.C.=Social Credit; L.-Lab.=Liberal-Labour; Ind.=Independent.

¹ Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1953, 25,285 voters on the list cast 40,508 votes.

² Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1953, 98,208 voters on the list cast 124,773 votes.

³ Electoral District of Yukon.

⁴ Electoral District of Mackenzie River.

Indemnities and Allowances.*—Members of the Senate receive a sessional indemnity of \$4,000. In addition, they receive an annual expense allowance of \$2,000 paid at the end of each calendar year. Members of the House of Commons are paid a sessional indemnity of \$4,000. In addition, they receive \$2,000 as an expense allowance paid at the end of each calendar year. This allowance, except in the case of Ministers of the Crown and the Leaders of the Opposition in the House and in the Senate, is not subject to income tax. The remuneration of a Cabinet Minister is \$10,000 a year and the Prime Minister \$15,000, in addition to the sessional indemnity and expense allowance each receives as a Member of Parliament. The Leader of the Opposition also receives \$10,000 a year in addition to his sessional indemnity and expense allowance. A Cabinet Minister is also entitled to a motor-car allowance of \$2,000. The Speakers of the Senate and of the House of Commons receive, besides their sessional indemnity and expense allowance, a salary of \$6,000 and a motor-car allowance of \$1,000 and are also entitled to \$3,000 in lieu of residence. The Deputy Speaker of the House of Commons receives a salary of \$4,000 and an allowance in lieu of a residence of \$1,500. Parliamentary Assistants to the Ministers of the Crown, of whom there were 12 at Dec. 31, 1953, receive \$4,000 sessional indemnity as Members of Parliament, \$4,000 a year as Parliamentary Assistants and the \$2,000 expense allowance paid to all Members of Parliament.

The Federal Government Franchise.—Legislation concerning the right to vote at federal elections is outlined in the 1947 Year Book, pp. 72-73.

The present franchise laws are contained in the Canada Elections Act (R.S.C. 1952, c. 23). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years and who have been ordinarily resident in Canada for 12 months prior to polling day at a federal election, and ordinarily resident in the electoral district on the date of the issue of the writ ordering such election. Persons denied the right to vote are:—

- (1) Judges appointed by the Governor General in Council;
- (2) The returning officer for each electoral district;
- (3) Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (4) Indians ordinarily resident on an Indian Reserve who were not members of His Majesty's Forces in World Wars I or II, or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property;
- (5) Persons restrained of their liberty or deprived of the management of their property by reason of mental disease;
- (6) Doukhobors who are exempt from military service and are disqualified by provincial law from voting at elections of members of the legislative assembly;
- (7) Persons disqualified, under any law relating to the disqualification of electors, for corrupt and illegal practices.

The Canadian Defence Service Voting Regulations set out in the Schedule to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

* Bills affecting the indemnities of Members of the House of Commons, the Senate, Cabinet Ministers, etc., were being debated in Parliament in February 1954.

APPENDIX II

The results of provincial general elections held between Mar. 31, 1953, the date of the closing-off of the material on Provincial and Territorial Governments, pp. 55-69, and Dec. 31, 1953, are covered in this Appendix.

In the case of Prince Edward Island, no election was held but the Ministry changed on May 25, 1953.

1.—Members of the Twenty-Third Ministry of Prince Edward Island

(Party standing at latest General Election, Apr. 26, 1951: Liberal 24, Progressive Conservative 6.)

Office	Name
Premier and President of the Executive Council.....	Hon. ALEXANDER W. MATHESON

DEPARTMENT OF MINES AND TECHNICAL SURVEYS
TORONTO AND MONTREAL, CANADA

UNITED STATES

NOTE.—Generally, the distances given are the shortest by rail.

The air-line distances used are not necessarily the straight-line distances between points, but are the distances over the routes usually travelled by aeroplane in good weather.
